5. In an attaching device for bicycle dress-guards, the combination, with a keeper adapted for attachment to the frame, the said keeper being provided with a stud, of a latch provided with a slot to receive the stud of the keeper, casings formed upon the body of the latch, and spring-controlled pistons located within the said casings and extending outwardly therefrom.

6. In an attaching device for bicycle dress-guards, the combination with a keeper adapted for attachment to the frame, the said keeper being provided with a stud, of a latch provided with a slot to receive the stud of the keeper, casings formed upon the body of the latch, spring-controlled pistons located within the said casings and extending outwardly therefrom, and a bar connecting the pistons in the said casings, the said bar being adapted to receive the loops at the lower end of the dress-guard, as and for the purpose specified.

7. The combination with a mud-guard, and a dress-guard adapted for attachment at its upper portion to the said mud-guard, of a keeper adapted to be attached to the bicycle-frame and having on its outer face a projecting stud and a latch comprising a body-plate having a slot to receive the stud of the keeper the said body-plate being provided with extensions from its upper edge forming guideways and spring-controlled rods having movement in the said guideways, the upper ends of the said rods being arranged for engagement with the lower portion of the dress-guard, for the purpose set forth.

606,493. MAGAZINE-PISTOL. WESLEY H. TRIPPETT, Redlands, Cal. Filed Jan. 2, 1897. Serial No. 617,747. (No model.)

Claim.—1. A firearm provided with a magazine mounted to turn and having a ring-shaped rim formed with bores adapted to contain cartridges, the axis of the said magazine standing at an inclination to the axis of the barrel of the firearm and the rim and bores standing at an inclination to the axis of the magazine, substantially as shown and described.

2. A firearm provided with a magazine mounted to turn beneath the barrel, the rim of the magazine being provided with bores the axes of which stand at an inclination to the axis of the magazine, substantially as shown and described.

3. A firearm having a pivot located under the barrel of the firearm and standing at an inclination thereto, and a magazine mounted to turn on said pivot and made ring-shaped, the rim of the magazine being inclined to the axis of the magazine and passing through the frame of the firearm, substantially as shown and described.

4. A firearm having a pivot located under the barrel and arranged at an inclination thereto, and a magazine mounted to turn on the said pivot and made ring-shaped, the rim of the magazine being formed with bores inclining downwardly and outwardly with respect to the axis of the magazine, the said rim passing through the frame of the firearm at the rear of the barrel, substantially as set forth.

5. A firearm provided with a magazine adapted to contain cartridges, the said magazine being mounted to turn under the barrel, the rim of the said magazine being inclined to the axis of the magazine and provided with bores, whereby when the magazine is turned, the bores are successively brought into alinement with the barrel of the firearm at the rear thereof, and an external guard for the magazine for holding the cartridges in place, substantially as shown and described.

6. A firearm provided with a magazine adapted to contain cartridges and mounted to turn under the barrel, the said magazine being ring-shaped and having its rim extending downwardly and outwardly at an inclination to the axis of the magazine, the said rim being formed with radially-arranged bores adapted to be brought into alinement with the barrel of the firearm, substantially as shown and described.

7. A firearm provided with a transverse opening at the rear of the barrel and in line therewith, a ring-shaped magazine mounted to turn on a pivot located under the barrel and having its rim inclining downwardly and outwardly and provided with bores, the said rim extending through the transverse opening at the rear of the barrel and as external guard for the magazine made cup-shaped and having an opening in its flange to permit of filling the magazine with cartridges, substantially as shown and described.

8. A firearm provided with a ring-shaped magazine pivoted beneath the barrel, said magazine having in its rim radially-arranged bores adapted to contain cartridges, said rim and bores inclining to the axis of the magazine and adapted to pass through an opening in the frame of the firearm at the rear of the barrel, and a cup-shaped inner guard for said magazine, the said guard having a flange formed with an opening at its rear for the passage of the bullet from the magazine to the barrel, the flange decreasing in thickness toward said opening, substantially as shown and described.

9. A ring-shaped magazine for firearms having its rim provided with radially-arranged bores, the axes of the said bores being inclined to the axis of the magazine, substantially as shown and described.

10. A magazine for firearms provided with a bottom plate having a central pivot-opening, and a ring-shaped rim provided with radially-arranged bores, the said rim being connected with the said plate and inclining downwardly and outwardly with respect thereto, substantially as shown and described.

606,494. CONVERTIBLE VEHICLE AND ROCKER. CHARLES W. WEBSELL and JAMES E. WATERS, Thurmont, Md. Filed Sept. 13, 1897. Serial No. 651,860. (No model.)

Claim.—1. The combination with a body, a fixed rear axle, and a fixed cleat or bolster block at the front of the body, of a front axle, wheels on both of said axles, a pivot-post secured on the front axle and loosely passing up through the bolster or cleat, a cross-handje on the top of the post, a wear-plate on the bolster, and a wear-plate on the front axle, and means for clamping the wear plates together to prevent said axle from swinging, as specified.

2. The combination with a vehicle-body, a fixed rear axle and a pivoted front axle, and wheels on both of said axles, of means for controlling the swinging movement of the front axle by the occupant of the body, a removable bottom for the body, a bottom located below the removable bottom and having two spaced elongated apertures near its forward end, a wear-plate on the body adapted to receive the threaded body of a screw-bolt, and a wear-plate secured on the front axle and in loose contact with the upper wear-plate, and having a curved slot through which the screw-bolt passes, the slot having a length adapting the two wear-plates to be slidable one on the other and to limit the swinging movement of the front axle, as specified.

3. The combination with a vehicle-body, and a front and a rear axle, of rockers removably held on the axle-spindles, as specified.

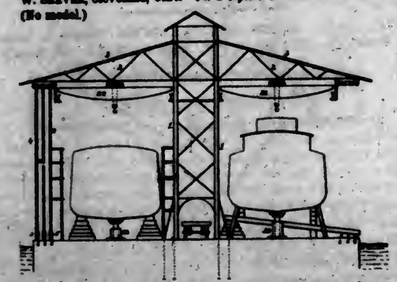
606,495. MOP. HERSHMAN A. WOLFF, New Haven, Conn. Filed Sept. 23, 1897. Serial No. 652,763. (No model.)

Claim.—1. In a mop-head, the combination, with a body-plate provided with a marginal flange and a series of transversely-arranged apertures, of a clamping-plate adapted to fit upon the apertured portion of the body-plate within the flange thereof, and locking devices whereby the clamping and body plates may be secured together, for the purpose specified.

2. In a mop-head, the combination, with a body-plate provided with a marginal flange, and openings produced in its surface within the flange, of a clamping-plate fitted to the body-plate within the flange, having its end portions roughened, and means, substantially as described, for securing the clamping-plate to the body-plate, for the purpose specified.

3. In a mop, the combination, with a body-plate provided with a marginal flange and a series of slots, and strips of absorbent material passed through the slots in the body-plate and across the webs between adjacent slots, of a clamping-plate fitted to the body-plate within the flanged portion, fastening devices whereby the body and the clamping plates are secured together, and a handle for the clamping-plate, substantially as described.

4. In a mop, the combination, with a body-plate having a marginal flange and slots in its surface within the flange, and strips of absorbent material passed downward through adjacent slots, crossing the webs between the slots, the end strips being carried upward over the ends and side portions of the flange of the body-plate adjacent to the ends, of a clamping-plate having roughened ends, the clamping-plate being fitted to the slotted portion of the body-plate, and fastening devices whereby the body and clamping plates are secured together, the said clamping-plate being provided with a socket adapted to receive a handle, for the purpose set forth.



606,496. BICYCLE-BRAKE. JULIUS I. ALLEN, Mendocino, Cal. Filed Dec. 10, 1898. Serial No. 615,162. (No model.)

Claim.—1. The combination, with a bicycle-fork, of pivot-pins adapted to be attached to said fork, a wheel, and a brake for the latter, of the improved spring-support composed of a looped wire spring having its ends formed as hooks, to detachably engage the brake, and having coils that form eyes adapted to receive said pivot-pins, the closed end of the spring bearing in the crotch of the fork, as shown and described.

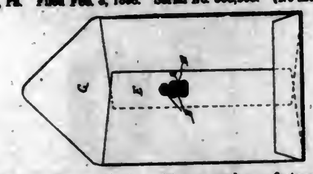
2. The combination, with a bicycle-fork, a wheel, and the detachable roller or drum, having radial pivot-arms, of the clamps composed of elastic bands applied to said fork, and right-angular screw-bolts whose inwardly-projecting portions constitute fulcrum-pins on which the brake-arms are pivoted, and the looped spring, having eyes for receiving said pins, and engaging the forks and roller-arms at its respective ends, as shown and described.

606,497. SHIP-BUILDING PLANT. WASHINGTON I. BABCOCK, Chicago, Ill., and SAMUEL T. WELLMAN, CHARLES H. WELLMAN, and JOHN W. SEAVER, Cleveland, Ohio. Filed Apr. 12, 1897. Serial No. 631,814. (No model.)

Claim.—1. The combination of a row of posts or columns with cantaliver roof-trusses projecting laterally therefrom, and an outer structure presenting resistance to vertical tension and serving to anchor the projecting portions of said roof-trusses, substantially as specified.

2. The combination of a row of posts or columns with cantaliver roof-trusses projecting laterally therefrom, and an outer structure serving to support or anchor the outer ends of the projecting roof-trusses, said outer structure being movable, substantially as specified.

3. The combination of a row of posts or columns with cantaliver roof-trusses projecting laterally therefrom, and sliding doors guided on the outer projecting portions of the roof-trusses and on a suitable foundation, and movable so as to open or close the outer side of the structure, substantially as specified.



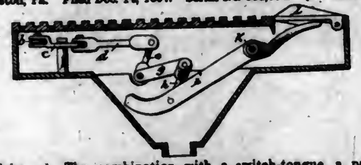
4. The combination of a row of posts or columns, cantaliver roof-trusses projecting laterally therefrom, sliding doors movable so as to open or close the outer portion of the structure, and means for effecting vertical confinement of said doors to the outer ends of the roof-trusses and to the foundation, substantially as specified.

5. The combination of a row of posts or columns having cantaliver roof-trusses projecting laterally therefrom, with an outer inclosure extending between the said roof-trusses and the foundation, and with means for vertically adjusting said outer inclosure whereby it is caused to anchor or rigidly support the outer portions of the roof-trusses, substantially as specified.

6. The combination of a row of posts or columns, with cantaliver roof-trusses projecting laterally therefrom, sliding doors movable so as to open and close the outer structure, said doors being flanged at top and bottom and flanged guides on the roof-trusses and foundation for engaging with said flanged portions of the doors, substantially as specified.

7. The combination of a row of posts or columns, cantaliver roof-trusses projecting laterally therefrom, and guides or runways mounted upon said structure and serving as a support for the bridge of a traveling crane, substantially as specified.

606,498. **ENVELOP-FASTENER.** WILLIAM BARNARD, Philadelphia, Pa. Filed Feb. 3, 1898. Serial No. 668,905. (No model.)



Claim.—1. In combination with an envelop, a fastener attached to the body of the envelop, said fastener having indentations in the edges thereof to produce sections adapted to fold one upon another, as and for the purpose described.

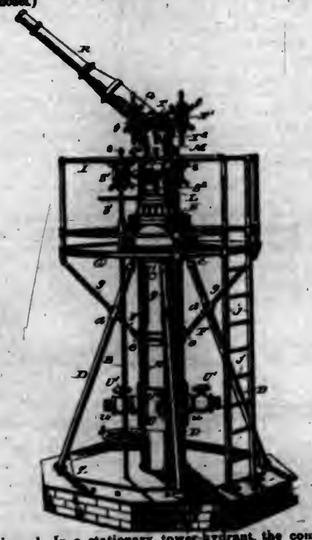
2. As a new article of manufacture, an envelop-fastener consisting of a single piece of metal having prongs by means of which it may be attached to an envelop, and sections adapted to fold one upon the other and in conjunction with the end of the closing-flap of the envelop, as specified.

3. As a new article of manufacture, an envelop-fastener consisting of a single piece of sheet metal having prongs formed thereon for attachment to the body of the envelop, and indentations in the edges thereof to produce sections adapted to fold one upon the other, as and for the purpose set forth.

4. In combination, an envelop having side flaps and a closing-flap, a fastener consisting of a single piece of sheet metal having prongs whereby it is secured to the side flaps, and indentations formed in the sides thereof for producing sections adapted to fold one upon the other in conjunction with the ends of the closing-flap, as specified.

606,499. **SWITCH-OPERATING DEVICE.** GEORGE B. BARRON, Easton, Pa. Filed Dec. 14, 1897. Serial No. 661,834. (No model.)

Claim.—1 The combination with a switch-tongue, a pusher therefor disconnected from the same, a pivoted lever projecting above the surface and operating connections between the pivoted lever and the pusher including a weighted lever for transmitting the depression of the projecting lever to the switch-tongue, the weighted lever returning both the pusher and the projecting lever to normal position, substantially as described.



2. In combination, a switch-tongue, a horizontal pusher disconnected from the same, a weighted lever, a cover projecting above the surface pivoted independently of said lever and supported by the same and operating connections between the weighted lever and the pusher, substantially as described.

3. In combination with a switch-tongue, and operating means therefor, a car and means carried by the car for actuating the switch-tongue-controlling device, consisting of a roller, a vertically-movable depressor and locking means for said depressor, with means positively operated for both operating the locking means and lifting the depressor, substantially as described.

4. In combination with a switch-tongue and means for operating it, a roller carried by the car vertically movable thereof, a stop and a lever movable with the roller and independently of the same adapted to engage said stop and means for releasing the lever and lifting the roller, substantially as described.

5. In combination with the pilot-board of a car, a movable frame B, a roller carried thereby, a bell-crank lever also carried by the frame, a stop engaging one end of the lever, a rod 6 engaging the other end, said lever having limited movement and operating connections to the position of the driver or motorman, substantially as described.

606,500. **FIRE-HYDRANT.** NICHOLAS BARRY, Jr., Muscatine, Iowa. Filed Sept. 5, 1896. Renewed May 11, 1898. Serial No. 680,365. (No model.)

Claim.—1. In a stationary tower-hydrant, the combination of the fixed stand-pipe, the upper and lower collars thereon, and the base, with the stays connected to the upper collar and anchored in the base, and the braces connected to the lower collar and to the stays at points above the collar and above the lower ends of the stays, substantially as and for the purpose set forth.

2. In a stationary tower-hydrant, the combination of the fixed stand-pipe, the upper and lower collars thereon, and the base; with the stays connected to the upper collar and anchored in the base, and the braces connected to the lower collar and to the stays above the base; with the platform-support G above the stays, and the braces connecting said platform-support to the stays, substantially as described.

3. In a tower-hydrant, the combination of the base, the fixed stand-pipe A rising therefrom, the collar C having sockets *c*, the inclined stays D, having nipples *d* connected to sockets *c* at top and to the base at bottom; with the collar E having sockets *c*; the braces F interposed between and connected to sockets *c* and nipples *d*; and the adjustable nozzle on the upper end of pipe A, all substantially as and for the purpose described.

4. In a tower-hydrant, the combination of the base, the fixed upright water-pipe A, the collar C having sockets *c* at the upper end of said pipe; the inclined stays D having nipples *d* secured at top to sockets *c* and at bottom to the base; the collar E on the pipe below collar C having sockets *c*, and the braces F interposed between and secured to sockets *c* and nipples *d*; with the platform-supporting ring G, the braces *g* connected to nipples *d* and supporting-ring G and the adjustable nozzle on the upper end of the pipe, all substantially as and for the purpose described.

606,501. **RAILROAD FOOT-GUARD.** CHARLES F. BERENDSEN, Centreville, Mich. Filed Jan. 28, 1898. Serial No. 668,053. (No model.)

Claim.—1. A foot-guard for converging rail-sections, comprising a spring-plate secured at one end to a stationary portion of the road-bed, covering the space between the rails and provided at its opposite end with antifrictional devices.

2. A foot-guard for converging rail-sections, consisting of a plate of spring metal secured at one end to a stationary part of the road-bed, inclosing the space between the rails and provided at its free end with rollers, as and for the purpose set forth.

3. A foot-guard for converging rail-sections, consisting of a plate of spring metal secured at one end to a tie or other stationary part of the road-bed, deflected upwardly from its point of connection with said tie, and having a flat portion covering the space between the rails, and rollers in the free end thereof bearing against the bases of the two opposite rails, and adapted to engage the lower surfaces of the heads of said rails, as and for the purpose set forth.

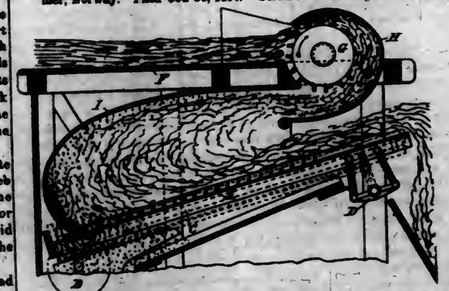
4. A foot-guard for converging rail-sections consisting of a plate of spring metal, secured at one end to a tie or other stationary part of the road-bed, deflected upwardly from its point of connection with said tie, having a flat portion covering the space between the rails and provided with a downwardly-deflected portion adjacent to its free end which terminates in a loop, and a double roller whose shank is inclosed by said loop and whose engaging portions bear against the bases of the rails and are adapted to engage the under side of the heads of the rails, as and for the purpose set forth.

5. A foot-guard for converging rail-sections, consisting of a plate of spring metal having a base and flat portion and an inclined web between said base and flat portion, formed by slots or recesses, the said flat portion being provided with laterally-extending tongues or fingers adapted to bear against the upper surface of the base of said rails, and the base of said plate adapted to fit beneath the base of the rails, as and for the purpose set forth.

6. The combination with a pair of converging rail-sections and the ties to which they are secured, one of said ties being cut away forming recesses beneath the bases of said rails, of a foot-guard consisting of a plate of spring metal having a base adapted to fit within the recess in said tie, provided with laterally-extending tongues or fingers adapted to bear against the top surface of the bases of said rails, provided with an inclined portion adjacent to said tongues, and a flat portion lying adjacent to the head of the rails, and covering the space between them, as and for the purpose set forth.

7. A foot-guard for converging rail-sections, comprising a spring-plate secured at one end to a stationary portion of the road-bed, covering a space between the rails and provided at its opposite end with outwardly-spring-pressed rollers, as and for the purpose set forth.

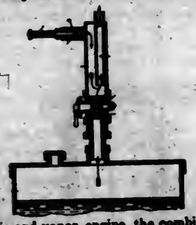
8. A foot-guard for converging rail-sections, comprising a spring-plate secured at one end to a stationary portion of the road-bed, covering the space between the rails and provided at its opposite end with a loop, a shaft fitting within said loop, rollers loosely mounted on said shaft, and a spring surrounding said shaft and engaging the adjacent ends of the hubs of said rollers, as and for the purpose set forth.



9. A foot-guard for converging rail-sections, comprising a spring-plate secured at one end to a stationary portion of the road-bed, covering the space between the rails and provided at its opposite end with a loop, a shaft fitting within said loop having heads or enlargements upon its opposite ends, rollers loosely mounted upon the ends of said shaft and provided with sockets or recesses in which said heads fit, and a coiled spring surrounding said shaft and engaging the inner ends of the hubs of said rollers, as and for the purpose set forth.

606,502. **GATE.** CARRIE D. BELL, Nicholasville, Ky. Filed Jan. 12, 1898. Serial No. 666,430. (No model.)

Claim.—The combination with a swinging gate, of a toggle-lever made up of two sections, one of which is pivoted at its lower end to a stationary point, and is provided with an elongated slot in its opposite end, and the other is pivoted at one end to the gate and at its opposite end to the first section at a point a short distance from the end of the slot therein, so that the end of said slot forms a stop, an adjustable weight upon one of said sections, operating-levers fulcrumed in posts located upon opposite sides of the gateway, and connections between the free end of said operating-levers and one end of one of the toggle-lever sections, as and for the purpose set forth.

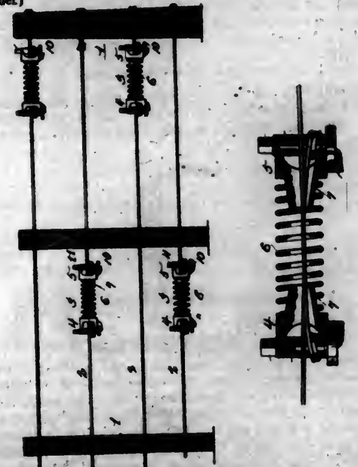


606,503. **THRESHING-MACHINE.** JULIUS BÖRSUM, Lillehammer, Norway. Filed Oct. 30, 1897. Serial No. 656,946. (No model.)

Claim.—In a threshing-machine, the combination of the feed-board the overshot threshing-cylinder, the concave, the semicylindrical deflecting-shell H, curved deflecting-shell I, beneath the feed-board, and the upwardly-inclined straw-shaker A adapted to move the straw out of the machine in a direction the reverse of that in which it is projected into said shell I by the cylinder, for the purpose set forth.

606,504. **EXPLOSIVE-ENGINE.** SAMUEL BOUTON, Philadelphia, Pa., assignor of one-half to William F. Rzwell and Alfred Rzwood, same place. Filed July 30, 1897. Serial No. 646,440. (No model.)

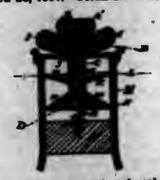
Claim.—In an air and vapor engine, the combination with the cylinder and piston, of a mixing-chamber having at its upper end a valve-controlled inlet for the entrance of air, a pipe leading from the cylinder to the mixing-chamber below the air-inlet thereof, a valve controlling said pipe and a vapor-reservoir in open communication with the mixing-chamber below said pipe, said valves controlling respectively the air-inlet to the mixing-chamber and the pipe leading to the cylinder being so arranged that upon the creation of a partial vacuum in the cylinder each valve will automatically open, substantially as and for the purposes described.



606,505. **WIRE-FENCE TIGHTENER.** SAMUEL C. BOWEN, Medina, N. Y. Filed June 17, 1898. Renewed Apr. 29, 1898. Serial No. 679,264. (No model.)

Claim.—1. A wire-fence tightener, comprising a hollow bracket formed with a solid end perforated for the passage of a fence-wire, a ratchet-head spindle journaled across the open end of said bracket, with its ratchet-head outside thereof, and a lug or detent, formed on the outside of the bracket, adapted to engage the teeth of the ratchet to prevent backward rotation of the spindle, said lug having a projection arranged to retain said spindle in proper operative position.

2. As a new article of manufacture, a fence-wire tightener, consisting of a hollow bracket formed with a solid end perforated for the passage of a fence-wire, a ratchet-head spindle journaled across the open end of said bracket, a lug or detent, formed on the outside of the bracket and adapted to engage the teeth of the ratchet-head and prevent backward movement of the spindle, a projection on said lug arranged to engage said ratchet and hold said spindle in operative position, and a wire loop having its ends passed through exterior perforations and secured in the solid end of the bracket.



606,506. COMPENSATOR FOR WIRE FENCES. SAMUEL C. BOWERS, Medina, N. Y. Filed June 17, 1896. Serial No. 595,869. (No model.)

Claim.—1. In a fence-wire-compensating device, the combination of two hollow supporting brackets, placed end to end, each provided with a ratchet-head spindle journaled across the outer end of the bracket, with its ratchet-head outside thereof, and a lug or detent, formed on the outside of the bracket, adapted to engage the teeth of the ratchet-head, to prevent backward rotation of the spindle, said lug having a projection arranged to retain said spindle in proper operative position, with a divided fence-wire, one end of which passes through one supporting-bracket and is connected to the spindle of the other bracket, while the other end of the wire passes through the other bracket and is connected to the spindle of the first bracket.

2. In a fence-wire-compensating device, the combination of two hollow supporting-brackets, placed end to end, a spiral spring between said brackets, each bracket being provided with a ratchet-head spindle journaled across the outer end of the bracket, with its ratchet-head outside thereof, and a lug or detent, formed on the outside of the bracket, adapted to engage the teeth of the ratchet-head, to prevent backward rotation of the spindle, said lug having a projection arranged to retain said spindle in proper operative position, said device being so placed in a divided fence-wire, that one end of the wire will pass through one bracket and be secured to the spindle of the other bracket, while the other end of the wire will pass through the other bracket and be secured to the spindle of the first bracket.

606,507. NON-REFILLABLE BOTTLE. EUREKA C. BOWER, Trenton, N. J. Filed Oct. 20, 1897. Serial No. 656,796. (No model.)

Claim.—1. The combination with a bottle, of a glass-cutter arranged within the neck thereof, and adapted to be turned therein to cut said bottle and render the same capable of being severed, substantially as set forth.

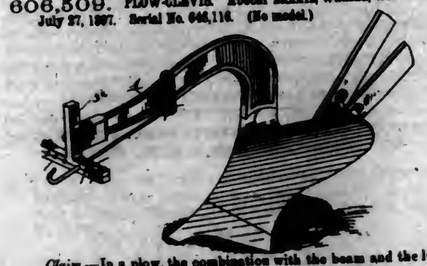
2. The combination with the bottle, and its plug, F, of a plate providing bearings for the severing device, and a severing device, adapted to be turned within the neck of the bottle to scratch or cut the inner walls thereof, substantially as set forth.

3. The combination with the bottle having the impermeable plug F, and a bearing-plate G, of a severing device, comprising cutting-arms adapted to be turned in said plate and a spreader adapted to be brought into spreading engagement with said cutting-arms to force the cutting-points into forcible engagement with the side walls of the bottle, substantially as set forth.

4. A severing device for bottles, comprising a plate G, adapted to provide bearings for the cutter, a cutter arranged and adapted to be turned in said plate, said cutter having arms provided with cutting-points and a spreader adapted to engage said arms to press the extremities of the same against the side walls of the bottle, substantially as set forth.

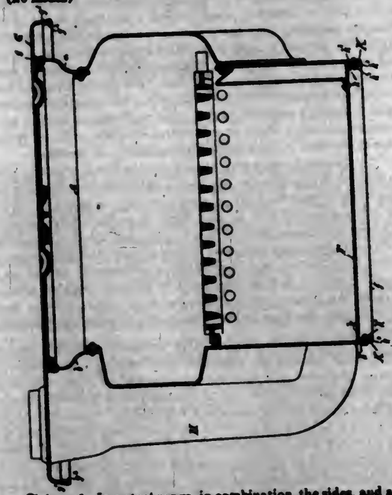
5. The combination of the hollow shank J, having a finger-piece I, and arms M, extending downwardly, and a spreader comprising a shank C, finger-piece A', and a foot D, said foot, being arranged beneath said arms M, and being adapted to be raised into contact with the arms M, to force the same against the sides of the bottle, substantially as set forth.

6. The severing device herein described, comprising the tubular shank J, the finger-piece I, having a threaded central opening, arms M, M forming a V-shaped aperture at the lower end of the device, and a spreader comprising a shank C, having threads to engage those of the finger-piece I, a finger-piece A', and a foot D, substantially as set forth.



7. The combination with the bottle having a groove formed horizontally in the inner walls thereof, of a plate G, provided at its center with a perforation *g*, in which the severing device has its bearings, a hollow shank, J, having a finger-piece I, arms K, arranged in said groove, arms M, provided with cutting-points, and a spreader comprising the finger-piece A', shank C, and foot D, all arranged and operating, substantially as set forth.

606,508. LETTER-FILE. CHRISTOPHER C. BOYKIN, Norfolk, Va., assignor of one-fourth to John W. Steel and Herbert S. Hazlette, same place. Filed Apr. 23, 1897. Serial No. 633,477. (No model.)



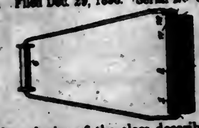
Claim.—In a letter-file, the combination of a base provided at opposite sides in its upper face with bearing-recesses, a cutting-lever provided between its ends with legs forming pintles and resting in the bearing-recesses, a fastening device extending through the lever and projecting above the same, and a coiled spring disposed on the fastening device and bearing against the upper face of the lever to hold its cutting end normally elevated, said fastening device serving to support the spring and to secure the lever to the base, substantially as described.

606,509. PLOW-CLEVIS. AUGUST BRAATE, Waseca, Wis. Filed July 27, 1897. Serial No. 646,116. (No model.)

Claim.—In a plow, the combination with the beam and the lugs at the front end thereof formed with opposite holes, of the vertically-movable arm or bar formed with a number of holes, the pin passing through said holes, the horizontal arm or bar at the lower end of said vertically-movable arm or bar formed with recesses in the under side of the bar secured thereto formed with coinciding recesses in its upper side, the set-screws connecting said bars, the rod passing through said recesses formed with a hook at the front end and the clip secured to the beam with which the rear end of said rod is connected, substantially as described.

606,510. STEEL RANGE. ADELBERT H. BROWNE, Cleveland, Ohio. Filed Dec. 4, 1896. Renewed Dec. 13, 1897. Serial No. 661,757. (No model.)

Claim.—1. In a steel range, in combination, the sides, and a steel top having an opening for the cover-frame and having the edges thereof bent down and united to some of the sides by cup-joints and bolts, substantially as and for the purpose specified.



2. In a steel range, in combination, the sides having their upper portions bent outward, a steel top having an opening and having the edges of said opening bent down and in to form a seat for the cover-frame, and then down again, said last-named downwardly-bent parts being connected with the tops of the sides, substantially as and for the purpose specified.

3. In a steel range, in combination, the front having an oven-opening, a piece *a* secured to the top of said side and forming the top of said opening; the edges of said opening being folded back to form channels, and the oven-plates united with one another and having bent edges which lie and are secured in said channels, substantially as and for the purpose specified.

4. In a steel range, a door consisting of a single piece of sheet metal, the edges of which are curved inward, then outward into a plan parallel with the central part of said door, then folded back upon themselves and then curved inward again, substantially as and for the purpose specified.

5. In a steel range, in combination, the sides, and a steel top having on its outer edge a downwardly-turned flange, the edge of which is folded up against said flanges, and having an opening for the cover-frame, the edges of said opening being bent down again, substantially as and for the purpose specified.

606,511. MEAT OR VEGETABLE CUTTER. ISAAC P. BUCKLES, Fulford, Colo. Filed Dec. 29, 1896. Serial No. 617,375. (No model.)

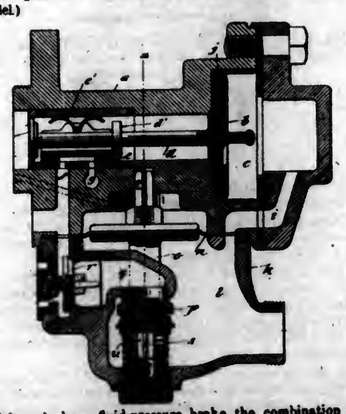
Claim.—1. In a device of the class described, the combination with a handle having inwardly-extending stab spindles or axles, of an annular band having upper and lower cutting edges, and which is journaled on said stubs or spindles, and a spring-pressed catch adapted to lock the handle to the knife.

2. In a device of the class described, the combination with a handle, of an annular knife pivoted to said handle and adapted to be reversed, a locking-catch pivoted to the handle and provided with a free portion, and also having a locking pin or bolt adapted to engage with the knife, and a spring interposed between the handle and the free portion of said catch.

3. In a device of the class described, the combination with a handle provided with side pieces terminating in inwardly-extending stub spindles or axles, of an annular band of metal journaled to swing on said stub-spindles and having one edge formed into a smooth cutter and its other edge made into a corrugated cutter, a locking-catch pivoted to the handle and provided with a free portion and also having a locking pin or bolt adapted for reception in an opening of the knife, and a coil-spring interposed between the handle and the free portion of the locking-catch which acts to keep the locking pin or bolt normally locked in the opening of the knife whereby the knife and handle are locked together.

606,512. BELT-CLAMP. WILLIAM P. CARLEY and WILLIAM T. RICKARDS, Camden, N. J. Filed Nov. 25, 1896. Serial No. 613,285. (No model.)

Claim.—1. A belt-clamp comprising in its construction spaced side bars, cross-bars connecting the same, and rock-bars arranged outside of said cross bars and journaled in the side bars, each of the cross-bars being provided with a straight face forming biting edges, and each of the rock-bars also provided with a straight face adjacent to the straight face on the cross-bar, the construction and arrangement being such that the cross-bars are designed to have the ends of the belt passed entirely around them and the belt to extend between their flattened surfaces and those of the rock-bars, and the extreme ends of the belt to extend under the lower biting edges of the rock-bars, substantially as described.



2. A belt-clamp, comprising spaced side bars, cross-bars rigidly connecting the same, and rock-bars journaled in the side bars outside thereof and extending parallel to the cross-bars, said rock-bars being journaled eccentrically, substantially as described

3. A belt-clamp comprising in its construction spaced side bars, cross-bars connecting the same, and rock-bars arranged outside of said cross-bars and journaled in the side bars and provided with spurs or teeth, each of the cross-bars being provided with a straight face forming biting edges, and each of the rock-bars also provided with a straight face adjacent to the straight face on the cross-bar, the construction and arrangement being such that the said cross-bars are designed to have the ends of the belt passed entirely around them and the belt to pass between their flattened surfaces and those of the rock-bars, and the extreme ends of the belt to extend under the lower biting edges of the rock-bars, substantially as described.

4. A belt-clamp, comprising side bars spaced apart, cross-bars rigidly connecting the same and having flat outer surfaces and rounded

inner surfaces, and rock-bars journaled in the side bars and arranged parallel to the cross-bars and opposite the flattened surfaces thereof, said rock-bars being provided with a longitudinal series of teeth or spurs adapted to engage the ends of the bolt between the cross-bars and rock-bars, substantially as described.

606,513. VALVE FOR AIR-BRAKES. JESSE F. CARPENTER, Washington, D. C. Filed Mar. 18, 1892. Serial No. 425,411. (No model.)

Claim.—1. In a fluid-pressure brake, the combination with a triple-valve mechanism, of a quick-acting-valve mechanism consisting of a piston or diaphragm exposed on one side to auxiliary-reservoir pressure and on the other to train-pipe pressure, a valve operated by said piston or diaphragm, and a passage from the train-pipe to the brake-cylinder controlled by the said valve, the two valve mechanisms being located in a casing common to both, substantially as described.

2. In a fluid-pressure brake, the combination with a triple-valve mechanism, of a quick-acting-valve mechanism consisting of a piston or diaphragm exposed on one side to auxiliary-reservoir pressure and on the other to train-pipe pressure, a valve operated by said piston or diaphragm, a passage from the train-pipe to the brake-cylinder controlled by said valve, and a check-valve in said passage, the two valve mechanisms being located in a casing common to both, substantially as described.

3. A quick-acting-valve mechanism for air brakes, comprising a diaphragm suspended in a chamber open on one side of such diaphragm to the train-pipe pressure, and on the other to the auxiliary-reservoir pressure, and movable only under an abnormal reduction of pressure in the train-pipe side of the diaphragm to the brake-cylinder, and a valve operated by the diaphragm for controlling the said duct, in combination with a triple valve and independent of any movement thereof, and a body or shell common to the two valves, substantially as described.

4. A quick-acting-valve mechanism for air-brakes, comprising a diaphragm suspended in a chamber open on one side of such diaphragm to the train-pipe pressure, and on the other to the auxiliary-reservoir pressure, and movable only under an abnormal reduction of pressure in the train-pipe, a duct projecting into the chamber and leading from the train-pipe side of the diaphragm to the brake-cylinder, a valve suspended from the diaphragm and operated by the diaphragm for controlling the said duct, and a check-valve in said duct seating with the exhaust from the brake-cylinder, combined with the triple valve, and a body or shell common to and inclosing the triple valve and the quick-acting valve, substantially as described.

5. The combination with an ordinary automatic triple valve, of a quick-acting-valve mechanism, and a body or shell common to both, said quick-acting valve comprising a diaphragm suspended in a chamber which is made in said body or shell and open on one side of such diaphragm to the train-pipe pressure, and on the other to the auxiliary-reservoir pressure, the diaphragm being movable only under an abnormal reduction of pressure in the train-pipe, a duct leading from the train-pipe side of the diaphragm to the brake-cylinder, and a valve operated by the diaphragm for controlling the said duct, substantially as described.

6. In a quick-acting-valve mechanism for air-brakes the combination of the chamber into which the train-pipe enters, a duct projecting into such chamber, a valve seating in the mouth of such duct, and a diaphragm always open to auxiliary-reservoir pressure and from which diaphragm said valve is suspended, substantially as described.

7. In a quick-acting-valve mechanism for air-brakes the combination with an ordinary triple valve, of the chamber into which the train-pipe enters, a duct projecting into such chamber, a valve seating in the mouth of such duct, a saddle or yoke in which such valve is arranged, and a diaphragm always open to auxiliary-reservoir pressure and from which diaphragm such valve is suspended, the said valve and diaphragm operating independently of any movement of the ordinary triple valve, substantially as described.

8. In a quick-acting-valve mechanism for air brakes the combination of the chamber into which the train-pipe enters, a duct projecting into such chamber, a valve seating in the mouth of such duct, a saddle or yoke in which such valve is arranged, and a diaphragm always open to auxiliary-reservoir pressure from which diaphragm said saddle or yoke is suspended, substantially as described.

606,514. DESK ATTACHMENT. WILLIAM H. CARRIER, Adrian, Mich. Filed Jan. 26, 1898. Serial No. 667,991. (No model.)

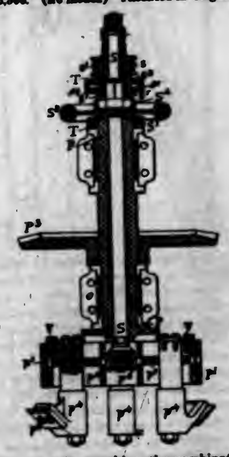
Claim.—1. A support comprising among its members, a clamping device adapted to be secured to a desk or other article, having a pair of clamping-jaws, forming a clamping-recess between them, a board-holding device pivoted to said clamping device, substantially in line with the upper and inner corner of said clamping-recess, and means for adjustably securing said board-holding device in different positions, whereby the edge of the board opposite the board-holding device will rest upon the edge of the desk or other article, substantially as described.

2. A support comprising among its members, a plate provided with a pair of clamping-jaws, forming a clamping-recess between them, for engaging the edge of a desk or other article, a board-holding device pivoted to said plate substantially in line with the upper and inner corner of said recess, and provided with means for attaching it to one edge of a board, the said plate being provided with a curved slot concentric with the said point of pivoting, and a set-screw passing through said slot and engaging said board holding device, whereby the edges of the board opposite the clamp will rest upon the edge of the desk or other article, substantially as described.

3. A support comprising among its members a clamping device provided with clamping-jaws forming a clamping-recess between them adapted to engage the edge of a desk or other article, a board-holding device provided with an adjustable clamp for holding boards of different thicknesses, pivoted to said clamping device, substantially in line with the upper and inner corner of said clamping-recess, and means for adjusting said board-holding device with respect to the clamping device to hold the board in different angular positions, whereby the edge of the board opposite the board-holding device will rest upon the edge of the desk or other article, substantially as described.

4. A support comprising among its members, a plate provided with a fixed jaw and an adjustable jaw, forming a clamping-recess between them for engaging the top of a desk or other article, said plate being provided with a pivot substantially in line with the upper and inner corner of said recess, and a curved slot concentric with said pivot and a board-holding device secured to said plate by said pivot and provided with an adjustable clamp for holding boards of different thicknesses, and an adjusting set-screw passing through said slot and engaging said board-holding device, whereby the edge of the board opposite the board-holding device will rest upon the edge of the desk or other article, substantially as described.

606,515. RAIL-CHAIR. GEORGE D. CLAFLIN, Jr., Toledo, Ohio, assignor to the American Rail Joint and Manufacturing Company, Cleveland, Ohio. Filed Dec. 6, 1897. Serial No. 660,909. (No model.)



Claim.—1. A rail chair consisting of the members A and B, having oblique interlocking tongues, the member A consisting of a body

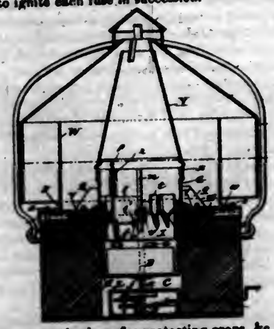
a^3, and a base having the two flat seats a' a^2 in different planes, the member B consisting of a body and a base having a flat seat b^4 which is in the same plane with the seat a^2, combined with an intermediate member which fits between two rails resting upon the seats a' and a^2 b^4, and bears against the feet and balls of said rails, substantially as specified.

2. A rail-chair consisting of the members A and B, having oblique interlocking tongues, the member A consisting of a body a^3 and a base having the two flat seats a' a^2 in different planes, and having an integral lug projecting from the inner face of the body and adapted to pass through a hole in the web of the proximate rail and into a hole in one side of the member C, the member B consisting of a body and a base having a flat seat b^4, which is in the same plane with the seat a^2, combined with an intermediate member which fits between two rails resting upon the seats a' and a^2 b^4, and bears against the feet and balls of said rails, substantially as specified.

606,516. MACHINERY FOR MANUFACTURING CASKS OR BARRELS. ROBERT COLLEN, London, England. Filed Dec. 24, 1897. Serial No. 663,366. (No model.) Patented in England July 28, 1896, No. 16,670.

Claim.—1. In a crozing-machine, the combination of a revolving head carrying tools or cutters for effecting the crozing, chiming and jiggering operations, automatic mechanism capable of giving said cutters radial movement either inward or outward with relation to the cutter-head, and means under the control of the operator and capable of causing said mechanism to operate to produce either of said radial movements of the cutters, substantially as described.

2. In a crozing-machine, a revolving cutter-head, crozing, chiming and jiggering tools carried by the cutter-head and capable of radial movement inward and outward relative thereto, means capable of giving the tools movement in either direction and means whereby the direction of movement of said tools may be controlled, substantially as described.



3. In a crozing-machine, a cutter-head, tools carried by said cutter-head and capable of radial movement relative thereto, a shaft supporting the cutter-head, a second shaft operatively connected to the tools on said head, and means imparting differential revolutions to the two shafts, and means capable of altering the rate of speed of one shaft with relation to the other whereby the radial movements of the tools are effected, substantially as described.

4. In a crozing-machine, a revolving cutter-shaft, cutting-tools supported thereby, an independently-rotatable shaft effecting the movement of the cutting-tools to and from their work, means imparting differential speed revolutions to the two shafts, means capable of varying the rate of speed of one of the shafts substantially as described.

5. In a crozing-machine, a revolving cutter-shaft, cutting-tools supported thereby, a second shaft concentric with the cutter-shaft and controlling the movement of the tools to and from their work, means causing one shaft to revolve faster than the other, and means for altering the rate of speed of one of the shafts to make it rotate either faster or slower than the other shaft, substantially as described.

606,517. AUTOMATIC ALARM FOR PROTECTING CROPS, &c. LAURENCE L. CUSSENDEN, Guyton, Ga. Filed Sept. 3, 1897. Serial No. 650,963. (No model.)

Claim.—1. An automatic alarm for protecting crops, &c., consisting of a plurality of barrels adapted to be charged with explosive material, and arranged at intervals on a suitable base or support having a central bore or recess, fuses extending from the charges in said barrels into said bore or recess, and an igniting device arranged in said bore to ignite each fuse in succession.

2. An automatic alarm for protecting crops, &c., consisting of a plurality of barrels each adapted to contain an explosive charge and arranged at intervals upon a stationary base, a moving continuously-burning igniting device adapted to ignite the charges in said barrels in succession.

3. An automatic alarm for protecting crops, &c., consisting of a plurality of barrels adapted to contain explosive charges arranged at intervals on a circular base having a central bore or recess, fuses extending from said charges into the said central bore, and a rotating igniting device in said bore adapted to ignite the fuses in succession.

4. In an automatic alarm for the purposes defined, the combination of a circular supporting-base having a central bore or recess, a plurality of barrels radially arranged at intervals around said bore or recess, fuses extending from the charges into said bore or recess, a lamp rotatably mounted in said bore or recess, and mechanism for continuously rotating said lamp so as to cause the flame thereof to ignite the fuses in succession at predetermined intervals.

5. In an automatic alarm for the purposes defined, the combination with a supporting-base having a central bore, of a plurality of barrels adapted to contain explosive charges radially mounted around said bore, fuses extending from the charges into said bore, a series of guard-plates between adjacent fuses, and an igniting mechanism adapted to move in contact with the fuses in succession, substantially as specified.

6. In an automatic alarm for the purposes defined, the combination of a supporting-base having a central bore, of a plurality of barrels adapted to contain explosive charges, fuses extending from said charges into the central bore, guards separating said fuses from one another, an igniting device with means for moving the same into contact with the fuses in succession, and means for covering one or more of said fuses to prevent ignition, substantially as described.

7. In an automatic alarm for the purposes defined, the combination with a supporting-base having a central bore, of a series of barrels adapted to contain explosive charges radially arranged around said bore, fuses extending from the charges into the central bore, guards between adjacent fuses, an igniting device rotatably mounted in said bore and adapted to ignite the fuses in succession, means for continuously rotating said igniting device, a movable guard adapted to cover one or more of said fuses to prevent ignition, and means for raising said guard after a predetermined interval of time, substantially as described.

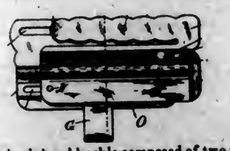
8. In an automatic alarm for the purposes defined the combination of a series of barrels adapted to contain charges of explosive material, fuses leading from said charges, continuously-burning igniting mechanism for igniting the fuses in succession at predetermined intervals, and means for covering one or more of said fuses and preventing the commencement of explosion until a given time has elapsed after the device is set in motion.

9. In an automatic alarm for the purposes defined, the combination with a supporting-base having a central bore, of a series of barrels adapted to contain explosive charges radially arranged around said bore, fuses extending from the charges into the bore, an igniting device rotatably mounted in said bore, and adapted to ignite the fuses in succession, a movable guard-plate covering one or more of the fuses and having a perforation therein through which a fuse may be inserted and being in the path of the igniting device, and means for moving said plate when said fuse is ignited, whereby the apparatus may be set in motion and the explosions begun at a predetermined time, substantially as described.

10. The combination with the barrels adapted to contain explosive charges, the supporting-base therefor having a central bore, of a shell or sleeve in said bore provided with perforations through which the fuses extend into the casing, a fuse guard-plate slidably mounted in the shell and adapted to cover one or more of the fuses, said plate being provided with a perforation through which a fuse extends and is secured, a rotating igniting device adapted to ignite said fuse and release the plate, substantially as specified.

11. In an automatic alarm for the purposes defined, the combination with a supporting-base having a central bore, of a series of barrels adapted to contain explosive charges arranged around said bore, a casing fitted in said bore provided with perforations opposite each barrel, fuses extending from the charges through said perforations, a lamp for igniting said fuses in succession, a separable chimney mounted on the casing, substantially as described.

12. In an automatic alarm for the purposes defined, the combination with a supporting-base having a central bore, of a series of barrels adapted to contain explosive charges arranged around said bore, a casing fitting said bore and extending some distance above the barrels, fuses extending from the charges through perforations in said casing into the bore, a lamp for automatically igniting said fuses in succession, a chimney removably mounted on the casing, and a hood having a depending body arranged to cover and protect the operating parts.



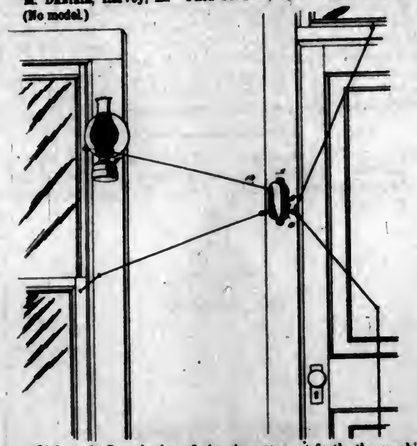
13. In an automatic alarm, the combination with the supporting-base, the barrels adapted to contain explosive charges, fuses leading from said charges, mechanism mounted in said base for igniting the fuses in succession, a shell extending above the base, a casing mounted on the base and surrounding said shell, and a hood overlapping said shell and casing and covering the operating mechanism substantially as described.

14. In an automatic alarm, the combination with a lower base-block having a central bore, an igniting device rotatably mounted therein, an upper block having a corresponding bore removably secured to said base-block, of a series of barrels adapted to contain explosive charges secured to said upper block, means for rotating said igniting device, and connections between said igniting device and the charges, substantially as described.

15. In an automatic alarm, the combination with the supporting-base having a central bore, a tubular casing mounted in said bore and extending above the base, a series of barrels adapted to contain explosive charges radially arranged around said casing; fuses extending from the charges through perforations in said casing, a sleeve located within the casing and over or through the perforations in which the fuses pass, guard-plates separating said fuses, a lamp rotatably mounted in the bore below the fuses, and mechanism for rotating said lamp, substantially as described.

16. In an automatic alarm, the combination with the supporting-base having a central bore, a tubular casing mounted in said bore and extending above the base, a series of barrels adapted to contain explosive charges radially arranged around said casing; fuses extending from the charges through perforations in said casing, a sleeve located within the casing and over or through the perforations in which the fuses pass, guard-plates supporting said fuses, a lamp rotatably mounted in the bore below the fuses, and mechanism for rotating said lamp, and a spring-actuated fuse guard-plate slidably mounted on the sleeve adapted to cover one or more of the fuses to prevent ignition until a predetermined time has elapsed after the lamp begins to rotate, substantially as described.

606,518. BACK-BAND BUCKLE FOR TRACE-CARRIERS. MADISON DALLAS, New Orleans, La. Filed Dec. 16, 1897. Serial No. 662,239. (No model.)



Claim.—1. A back-band buckle composed of two plates, adapted to slide the one upon the other, each plate being provided with a headed stud which engages in a slot of the other plate, and each plate being provided with a corrugation which engages with a corrugation of the other plate, substantially as described.

2. A back-band buckle composed of two plates adapted to slide the one upon the other, each plate being provided with a headed stud engaging in a slot of the other plate, one of said plates being provided with a slot and the other being provided with a serrated arm for securing the back-band to the buckle, substantially as described.

3. A back-band buckle composed of two parts adapted to slide the one upon the other, the first part being provided with two slots, a guiding-stud, two guiding projections, and a projection bent over to form a hook, and the second part being provided with a serrated arm having an upturned end, two guiding projections, a slot, a guiding-stud, a handle or catch, and a part cooperating with the projection on the first-named plate to form a hook, substantially as described.

606,519. BURGLAR-ALARM. SAMUEL B. DANIELS and MARY M. DANIELS, Harvey, Ill. Filed Sept. 24, 1897. Serial No. 652,813. (No model.)

Claim.—1. In a device of the character set forth, the combination with clock mechanism, of a sweep attached thereto, to which a cord is connected, means for sensitively holding the clock mechanism against movement, a bell-crank lever pivotally mounted adjacent to the clock mechanism and having an elongated arm to which a cord or analogous device is attached, said bell-crank lever being formed with a loop, and an arm in connection with the clock mechanism adapted to be engaged by said loop, substantially as described.

2. In a device of the character set forth, the combination of clock mechanism, including an alarm and having a trip-arm projecting from a portion thereof, a sweep attached to the clock mechanism, a bell-crank lever adjacent to the clock mechanism and having a loop for engagement with the said arm and of itself provided with an elongated arm, and cords or analogous devices attached to the sweep and elongated arm of the bell-crank lever and extending in opposite directions, substantially as described.

3. In a device of the character set forth, the combination of clock mechanism, including an alarm, a sweep attached thereto, means for sensitively holding the clock mechanism against movement, a connection running from said sweep, and an arm comprising rebent fingers to straddle a wick-shaft and embrace a thumb-wheel thereon, whereby the degree of brilliancy of a light may be controlled at a distance from the clock mechanism, substantially as described.

4. In a device of the character set forth, the combination with clock mechanism, including an alarm, a sweep attached to one portion of said mechanism, sensitive holding devices in connection with an opposite part of said clock mechanism, and cords or analogous devices attached to said sweep and sensitive holding devices and extending away from the clock mechanism in opposite directions, substantially as described.

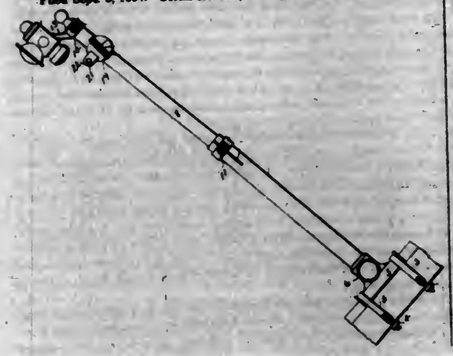
5. In a device of the character set forth, the combination of clock mechanism, including an alarm, a sweep attached to said clock mechanism, sensitive holding devices for said mechanism, connections attached to the said sweep and sensitive holding devices and extending away from the clock mechanism in opposite directions, and an arm to which one of the cords or analogous devices is connected and mounted on a controlling device for a lamp, substantially as described.

606,520. REVOLVING COAL CHUTE AND CRIB. ROBERT T. DARRAH, Philadelphia, Pa. Filed May 10, 1897. Serial No. 635,816. (No model.)

Claim.—1. In a device of the character set forth, the combination of a revolving crib, and a telescopic coal-chute carried thereby, substantially as and for the purposes specified.

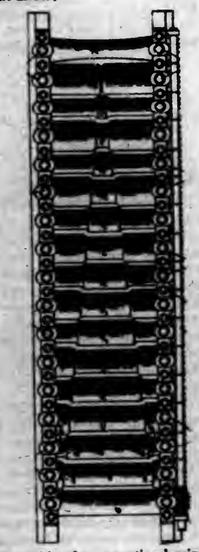
2. In combination with a wagon bed or body, a revolving crib attached thereto, a coal-chute comprising a series of telescopic sections movable into and outward from the said crib, means for holding the chute in its adjusted position, substantially as described.

3. In a device of the character set forth, the combination of a wagon bed or body, guides attached thereto, a supporting-bar adjustably mounted in said guides, and a crib having telescopic chute-sections therein rotatably attached to the said supporting-bar, substantially as and for the purposes specified.



4. A coal-chute comprising a rotatable crib, a series of telescopic sections provided with opposite flanged sides having slots therein, and connecting devices carried by a part of the chute-sections and engaging the slots set forth, substantially as and for the purposes specified.

5. In a device of the character set forth, the combination of a rotatable crib having a stationary chute-section mounted therein at a downward angle of inclination, and telescopic sections attached to said stationary section and to each other and adapted to telescope into said crib, substantially as and for the purposes specified.



6. In a device of the character set forth, the combination of a wagon-body having stay-chains and attaching devices on parts thereof, an adjustable crib mounted in connection with said body also having stay-chains thereon, and telescopic chute-sections carried by said crib and having devices at the outer end of the outermost section adapted to be engaged by portions of said stay-chains, said chute-sections being adapted to slide into said crib, substantially as and for the purposes specified.

606,521. REIN-HOLDER. NATHAN M. DAVIS, Ferguson, Iowa. Filed Sept. 6, 1897. Serial No. 650,929. (No model.)

Claim.—In a rein-support, a standard, in combination with a rein-holder proper comprising a hollow resilient metal ball capable of longitudinal adjustment on the standard, and having diametrically opposite openings to receive the standard, means for securing said ball at any height on the standard, diametrically opposite horizontal arms projecting from said ball, and split rings at the extremities of said arms forming guides and supports for the reins, each ring consisting of coils capable of springing apart to admit one of the reins, substantially as described.

606,522. MACHINE FOR SEPARATING LAMINATED PACKS. THOMAS A. DOBBINS, Martin's Ferry, Ohio. Filed Sept. 9, 1897. Serial No. 651,094. (No model.)

Claim.—1. A machine for separating laminated packs, comprising mechanism for moving the pack forward and bending it longitudinally as it moves forward at different points successively, as set forth.

2. A machine for separating laminated packs, comprising mechanism for moving the pack forward, bending it successively at different points and flattening at a previously-made bent portion as it receives a second bend, as set forth.

3. A machine for separating laminated packs, comprising mechanism for moving the pack forward and bending it longitudinally at different points successively and alternately in opposite directions, as specified.

4. A machine for separating laminated packs, comprising a suitable frame, a series of rollers arranged in pairs, each pair of rollers having annular portions for engaging and bending the pack in a longitudinal direction, the space between such annular portions gradually decreasing from the first set of rollers to the last, substantially as shown and for the purposes described.

5. A machine for separating laminated packs, comprising a suitable frame, a series of rollers arranged in pairs journaled therein, each pair having annular flanges to engage and bend the pack longitudinally, the space between the flanges in the rollers gradually decreasing on each pair, from the foremost pair to the last one, the said annular flanges being arranged alternately on each intermediate pair of rollers, whereby the pack will be alternately bent forward and downward, substantially as shown and for the purposes described.

6. A machine for separating laminated packs, comprising a suitable frame, a series of rollers arranged in pairs having means for corrugating or crimping the pack as it passes therebetween, such crimping means on each pair of rollers being successively arranged to engage the pack at different points toward the center, and a pair of straight rollers arranged to receive the pack from the last pair of bending or corrugating rollers, substantially as shown and for the purposes described.

7. A machine for separating laminated packs, comprising a suitable frame, a pair of straight face rollers at the front end, a pair of flat rollers at the rear end, a series of intermediate rollers arranged in pairs, each pair having annular flanges for engaging and bending

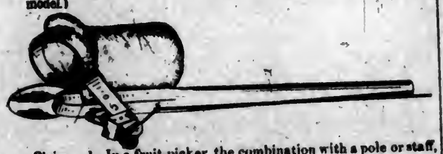
the pack, the space between the flanges of each pair of rollers gradually decreasing from the first roller to the rear one, said rollers having flattening portions opposing the previous pair of rollers, substantially as shown and described.

8. In a machine for separating laminated packs, substantially as described, a pair of presser-rolls having annular portions adapted to engage and corrugate or bend the pack longitudinally as it passes therebetween, a second pair of rolls having annular portions disposed inside of the annular portions of the preceding rolls, adapted to engage and corrugate or bend the pack, and having flat pressed portions in line with the annular portions of the preceding rolls, all being arranged substantially as shown and for the purposes described.

606,523. WIRE-STRETCHER. GEORGE M. DOYLE, Jonesville, Va., assignor of three-fourths to Perry Roop, Sam B Poteet, and A. C. McNiel, Jr., same place. Filed Mar. 28, 1898. Serial No. 675,430. (No model.)

Claim.—1. A wire-stretcher comprising the frame having longitudinal guides for the stretcher-bar and provided at its opposite ends with holding-hooks and having at points near said ends rearwardly-projected offsets provided with spurs extended toward each other and having the hooks adjacent to said offsets, the chain secured at one end to the main frame between said offsets and arranged at its other end to engage the proper one of the hooks on the main frame, the stretcher-bar movable lengthwise in the guides of the main frame and having at its opposite ends the stretching-hooks and between said ends the rack-bar, and the stretching-lever meshed with said stretcher-bar substantially as set forth.

2. A wire-stretcher comprising the frame having at its opposite ends devices for engagement by a chain and the chain secured at one end to the frame between the end devices and arranged at its other end to engage said devices, and the stretcher-bar movable in the frame and its operating devices, substantially as set forth.



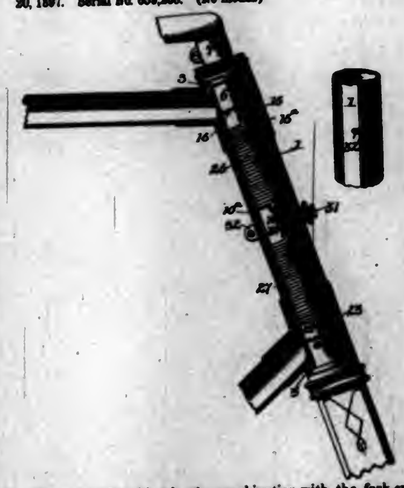
3. A wire-stretcher comprising the frame having a permanently-fixed holding hook or hooks and the stretcher-bar movable in said frame and having a hook which may be moved toward and from the fixed holding-hook on the frame substantially as set forth.

4. In a wire-stretcher the combination of the stretching devices, the main frame having a rearwardly-projecting offset provided with a spur to bite into the post, the chain for securing the frame to the post and devices whereby the chain connects with the frame substantially as set forth.

5. A wire-stretcher comprising the frame having guides for the stretcher-bar, the stretcher-bar, the stretching-lever meshed with said bar and a detent engaged with said lever whereby to secure the same, and the stretcher-bar in any desired adjustment substantially as set forth.

6. A wire-stretcher comprising the main frame having the permanently-fixed holding-hooks at its opposite ends and a guide between said holding-hooks, the stretcher-bar operating between said holding-hooks and having the stretcher-hooks at its ends, and the lever meshed with said stretcher-bar substantially as set forth.

606,524. FRUIT-PICKER. MOSES J. DRYSDALE and HINER RAYBURN, Bardwell, Ky. Filed Aug. 12, 1897. Serial No. 648,090. (No model.)



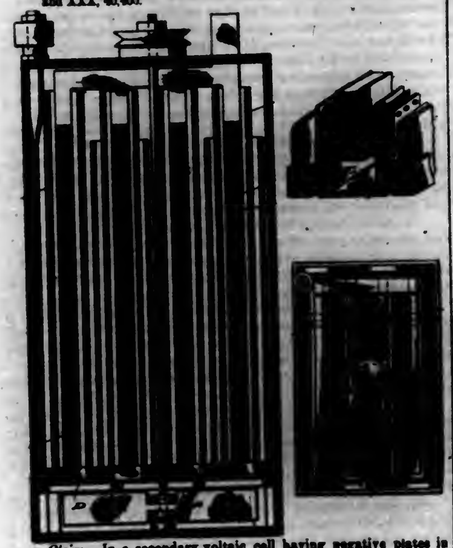
Claim.—1. In a fruit-picker, the combination with a pole or staff, of arms pivotally attached thereto and having a ring continuous therewith, a clip extending across the said arms, a spring interposed between the clip and staff and normally acting to hold the arms at an oblique angle to the said staff, a vertical disk mounted upon the staff adjacent to the said ring, a containing-receptacle attached to the ring of the arms, a supporting-band extending horizontally from the pole or staff, and an operating device attached to the arms and arranged to bring the continuous ring thereof against the vertical disk, substantially as described.

2. A fruit-gatherer having a containing-receptacle provided with resilient connections on the interior thereof adapted to raise the bottom of the receptacle upward toward the mouth of the same whereby a broad cushioned surface is provided for the fruit received, substantially as described.

3. In a fruit-picker, the combination of a pole or staff, arms movably attached thereto and having a ring or band continuous therewith, a clip extending across the said arms, a spring-arm bearing against the inner side of said clip to normally hold the arms at an oblique angle to the pole or staff, a closing disk stationarily mounted on the staff and positioned in a vertical plane, a containing-receptacle attached to the band or ring of the arms, a supporting ring or band extending horizontally from the pole or staff and having openings therein to which the said containing-receptacle is attached, elastic connections in the containing-receptacle, and means for operating the arms to bring the band or ring thereof against the closing-disk, substantially as described.

606,525. STEERING-GUIDE FOR BICYCLES. JAMES A. DUNNING, Aulander, N. C., and KENNETH BARROW, Norfolk, Va. Filed Nov. 20, 1897. Serial No. 659,265. (No model.)

Claim.—1. In a bicycle, the combination with the fork-spindle rotatably journaled in the head of the frame, of a pair of independent coiled springs seated around the said spindle within the head, means whereby one of said springs is operatively connected at one end with the said spindle when the latter is turned in one direction and means whereby the other of said springs is similarly connected with the spindle when it is turned in the opposite direction, each of said springs being disconnected from said spindle and inoperative during the time the other spring is operative, a member loose with respect to the spindle and to which the adjacent ends of the two springs are connected, and means for locking the said member to the head, substantially as specified.



2. In a bicycle, the combination with the fork-spindle, and the frame-head, of a pair of springs coiled around the said spindle within the head, means whereby each of said springs is operatively connected to said spindle when the latter is turned in one direction but not when it is turned in the opposite direction, said means operating upon one spring when the spindle is turned in one direction, and upon the other spring when it is turned in the opposite direction, and means whereby the adjacent ends of the two springs may be connected to the frame-head, substantially as specified.

3. In a bicycle, the combination with the fork-spindle, and with the frame-head, of a sleeve loosely seated upon the said spindle, within the head, a clutch device at each end of the said sleeve and having a clutch connection therewith and also with the spindle or with a part secured thereto, the two clutch devices being arranged to operate in opposite directions, two springs coiled around the said sleeve and respectively connected at opposite ends to the respective clutch devices, and at their adjacent ends to the said sleeve, and means whereby the said sleeve may be secured to the said head, substantially as specified.

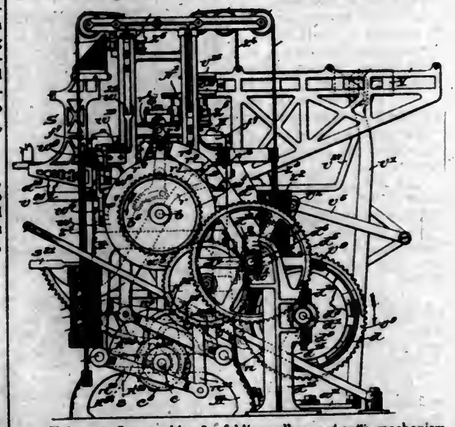
4. In a bicycle, the combination with the fork-spindle, and with the frame-head, of a sleeve loosely mounted on said spindle within the said head, and having a central enlarged portion, a clutch-sleeve loosely mounted upon each end portion of the loose sleeve and having a clutch connection with said loose sleeve and also with the fork-spindle or a part secured thereto, a clutch-ring loosely mounted upon each clutch-sleeve and adjustably secured thereto, two springs coiled around the said loose sleeve and connected each at one end to the said enlarged portion thereof, and at their opposite ends to the respective clutch-rings, and a device carried upon the exterior of the said head and adapted to engage the said enlarged portion of the loose sleeve to prevent rotary movement thereof, substantially as specified.

5. In a bicycle, the combination with the fork-spindle and the frame-head, of a sleeve loosely mounted upon the spindle within the head and having longitudinal projections at its end portions, a clutch-sleeve loosely mounted upon each end portion of the said loose sleeve and formed with an internal projection which is designed to engage the adjacent projection of the loose sleeve, and with lateral projections which are designed to engage corresponding projections upon the fork-spindle or upon a part secured to said spindle, a clutch-ring loosely seated upon each clutch-sleeve and adjustably connected thereto, the two springs coiled around the said loose sleeve and connected at one end thereto and at their opposite ends to the respective clutch-rings, and a set-screw carried by the frame-head and arranged to engage the said loose sleeve through an opening in the said head, substantially as specified.

606,526. SECONDARY VOLTAIC BATTERY. LUDWIG ENTZEN, London, England. Filed Dec. 28, 1895. Serial No. 573,649. (No model.) Patented in France Dec. 31, 1894, No. 11,414; in England Dec. 21, 1895, No. 24,516; in Belgium Dec. 21, 1895, No. 118,968; in Canada Jan. 15, 1896, No. 51,045, and in Italy Jan. 28, 1896, LXXIX, 181, and XXX, 40,405.

Claim.—In a secondary voltaic cell having negative plates in which lead oxid is the active material, and positive plates coated with amalgam of mercury and zinc, troughs in which said positive plates rest and in which the mercury is placed, and casings for the negative plates formed of porous non-conducting material inclosed between walls which surround the lower part of the plate, said walls having perforations except in their lower portions, substantially as described.

606,527. FENCE. ISAAC N. PELTENBERGER, Carnegie, Pa. Filed Aug. 12, 1897. Serial No. 648,090. (No model.)



Claim.—1. In a fence, the combination with posts having oppositely-located eyes, of detachable panels having pendent pintles adapted to be removably fitted in said eyes, and keeper-plates threaded upon the upper ends of said posts and adapted to prevent upward displacement of said pintles, substantially as described.

2. A fence-post, consisting of a metal strip bent intermediate to its ends to form a transverse offset and also comprising a pendent extension which projects downward from the offset and forms a continuation of the upper portion of the post, said extension being threaded, and a plate threaded upon said extension, substantially as and for the purpose described.

3. A fence-post bent intermediate to its ends to form a transverse offset and also comprising a pendent extension below and forming a continuation of the upper portion of the post, and a plate removably fitted upon said extension, substantially as described.

606,528. MACHINE FOR FORMING AND FOLDING COLLAR-BLANKS OR THE LIKE. ALBERT D. FENWICK, Philadelphia, Pa., assignor to the Fenwick Collar and Cuff Machine Company, Portland, Me. Filed Oct. 25, 1897. Serial No. 656,284. (No model.)

Claim.—1. In a machine for folding collars and cuffs, mechanism for automatically feeding and putting in precise position the blanks to be folded, a former for holding and defining the blank, means to move said former to hold the blank after the blank has been put in place, folding devices for infolding the blank, and means to move said folding devices, substantially as described.

2. In a machine for folding collars and cuffs, mechanism for automatically feeding and putting in precise position the blanks to be folded, a former for holding and defining the blank, means to move said former to hold the blank after the blank has been put in place, folding devices for infolding the blank, means to move said folding devices, and means to deliver the folded blanks from the machine, substantially as described.

3. The combination with a machine for folding blanks and the like, and having mechanism to form and fold a blank, of feeding and positioning mechanism, said mechanism comprising means to receive and automatically carry a blank into the machine, and means to position said blank accurately, to be operated upon by said forming and folding mechanism, substantially as described.

4. In a machine for folding collars and the like, the combination with forming mechanism and folding mechanism, of automatic means for feeding the blank thereto, and a positioning device to receive and place said blank in accurate position to be folded, substantially as described.

5. In a machine for folding collars and the like, mechanism to inturn the edge and ends of the blank, combined with feeding mechanism automatically to present the said blank accurately in position to have its edge and ends infolded, a feeding-plate to which said blank is secured, substantially as described.

6. In a machine for folding collars and the like, the following instrumentalities, viz: a feeding-plate to which is attached the blank to be folded, folding mechanism, feeding mechanism composed of a carrier and a positioning device, the carrier supplying the plate to said positioning device, said feeding mechanism presenting said plate and blank automatically in position to be acted upon by said folding mechanism, substantially as described.

7. In a machine for folding collars and the like, a feeding-plate to which the blank to be folded is attached, a platen or bed having formed in it a recess to receive in it said feeding-plate leaving the edges of the blank extended beyond said feeding-plate with the top of said feeding-plate flush with the said bed, combined with mechanism to infold the edge and ends of said blank while held on said feeding-plate, substantially as described.

8. In a machine for folding collars and the like, a feeding-plate to which the blank to be folded is attached, a platen or bed having

a recess to receive in it said feeding-plate leaving the edge of the blank extended beyond said feeding-plate, combined with mechanism to infold the edge and ends of said blank while on said feeding-plate, and with a positioning device to put said feeding-plate in position in the open space of said platen, substantially as described.

9. In a machine for folding collars and the like, a feeding-plate to which the collar-blank to be folded is attached, and a platen or bed on which said plate rests while the blank is being folded, combined with a cross-head, and a former having movable end pieces or definers cooperating therewith, and means to move said cross-head, substantially as described.

10. In a machine for folding collars and the like, a cross-head and its attached multipart former, having a middle portion and independent end pieces or definers to descend on a blank to be folded, substantially as described.

11. In a machine for folding collars and the like, a cross-head, its attached multipart former, having end pieces or definers to descend in extended position on a blank to be folded, and means to move said end pieces or definers in a straight line one toward the other from said original extended position, substantially as described.

12. The cross-head, its attached multipart former, having end pieces or definers, means to contract the perimeter of said former and to withdraw its central part or body from within the folded edge of the collar-blank, leaving the end definers in place, substantially as described.

13. The cross-head, its attached multipart former, having end pieces or definers, means to contract the perimeter of said former and to withdraw its central or body part from within the folded edge of the collar-blank leaving the end definers in place, and means to thereafter move said end definers one toward the other, to withdraw them from within the infolded ends of the blank, substantially as described.

14. A series of folding-blades, the cross-head, its attached multipart former having end pieces or definers, means to contract the perimeter of said former and withdraw its central or body part from the edge fold and to lift said body part from the folded blank, leaving the definers in place, substantially as described.

15. A series of folding-blades, the cross-head, its attached multipart former having end pieces or definers, means to contract the perimeter of said former to withdraw its central part from the folded edge of the blanks and then lift it from the folded blank, leaving the end definers in place, and means to thereafter move said end definers one toward the other to withdraw them from the infolded ends of the blank, substantially as described.

16. In a machine for folding collars and the like, a former, automatic means to cause it to descend on the blank to be infolded, and folding-blades one for each end and for the edge of said blank, combined with automatic means to actuate first one of the end blades, then the edge blade, and afterward the blade for the second end, substantially as described.

17. In a machine for folding collars and the like, the following instrumentalities, viz: a multipart former having two end pieces or definers normally in extended position, means to cause the former to descend in extended position on the blank to be folded, a series of folding-blades, one for each end and one for the edge of the blank, automatic means to actuate first one of said end blades, then the edge blade, and then the opposite end blade of the folding mechanism, means to contract said multipart former and withdraw its perimeter from within the infolded edge and ends of the blanks, substantially as described.

18. In a machine for folding collars and the like, the following instrumentalities, viz: a multipart former having two end pieces or definers, means to cause said former to descend on the blank to be folded, a folding mechanism presenting a series of folding-blades, one blade for each end and one for the edge of the blank, means to actuate first one of said end blades, then the edge blade, and then the opposite end blade, means to contract the perimeter of said multipart former and withdraw it from within the infolded edge and ends, and means thereafter to cause the said folding-blades to descend, pinch, crease, and set the infolded ends and edge of the blank, substantially as described.

19. In a machine for folding collars and the like, the following instrumentalities, viz: a feeding-plate to support the blank to be folded, means to removably fasten the blank thereto; carriers having means to removably engage said plate and carry it into the machine, substantially as described.

20. In a machine for folding collars and the like, the following instrumentalities, viz: a feeding-plate to support the blank to be folded, means to removably fasten the blank thereto; carriers having means to engage said plate and carry it into the machine, and a positioning device to which said carriers deliver said plate, substantially as described.

21. In a machine for folding collars and the like, the following instrumentalities, viz: a table, a plate-holding device, a feeding-plate provided with a suitable guide cooperating with said holding device, and a carrier having holding means to engage and carry said plate into the machine, substantially as described.

22. In a machine for folding collars and the like, the following instrumentalities, viz: a table having devices to hold and receive a feeding-plate; a feeding-plate having guides to cooperate with said devices; a carrier provided with means to engage said plate and take it into the machine and leave it there, and means thereafter to re-engage said plate and deliver it from said machine to said devices mounted on said table, substantially as described.

23. In a folding-machine; a feeding-plate; feeding mechanism, and automatically-operating locking devices between said plate and said feeding mechanism to enable said mechanism and plate to be automatically locked together to take said plate into the machine, and to thereafter enable said feeding mechanism and plate to be unlocked to be delivered from the machine, substantially as described.

24. The carrier, the feeding-plate to which is attached the blank to be folded, means between said carrier and said plate to couple the same together, a positioning device, and automatic means between said carrier and said positioning device to cause said feeding-plate to be given up to said positioning device, substantially as described.

25. In a machine for folding collars, a feeding-plate, folding mechanism to fold the blank on said plate, positioning devices to put said plate and blank in position to be folded, and to remove said plate with its folded blank from the folding mechanism; a carrier having a member to deliver said feeding-plate to said positioning device, and a second member actuated by said carrier to take said plate with its folded blank from said positioning device and feed it out of the machine, substantially as described.

26. In a machine for folding collars and the like, the following instrumentalities, viz: a feeding-plate to which is secured the blank to be folded, mechanism to infold the edge and ends of the blank held on said plate; a feeding-in carrier, a feeding-out carrier; and a positioning device whereby the feeding-in carrier takes said plate and delivers it automatically to said positioning device, and said positioning device, the blank having been folded automatically, delivers said plate and blank to the feeding-out carrier, substantially as described.

27. A feeding-plate for a folding-machine of the class described, said plate comprising longitudinally-adjustable portions, and means to extend them, whereby the plate may be accommodated to different lengths of collar-blanks and the like, and means removable to secure said blanks thereto, substantially as described.

28. A feeding-plate for a folding-machine of the class described, said plate being provided with movable transverse supports, means to adjust said supports as desired in order to accommodate different styles of blanks, and means removable to secure a blank to said plate, substantially as described.

29. A feeding-plate for a folding-machine of the class described, said feeding-plate comprising a body piece, and extension-pieces longitudinally movable thereon, and removable sections provided with interlocking means to be secured between said sections as the latter are adjusted in order to accommodate different lengths of blanks, substantially as described.

30. In a machine for folding collars and the like, the combination with mechanism for infolding the edge and ends of a blank, of a feeding-plate provided with means for removably securing said blank to it, and feeding mechanism including a positioning device provided with means to hold and retain said plate and its blank immovably thereon during the folding operation, substantially as described.

31. In a machine for folding collars and the like, the combination with a feeding-plate adapted to receive and retain a blank to be folded, and provided with devices to retain said blank, of means to positively release said retaining devices from holding engagement with the blank after the latter has been folded, substantially as described.

32. In a machine for folding collars and the like, the combination with a former to rest on and hold the blank in place, of folding mechanism to fold one fold over transversely to and on another at a corner of the blank, and means to fold back from said corner the free end of said top fold at the corner, substantially as described.

33. In a machine for folding collars and the like, the combination with a former or means to hold the blank in place, of a folding-blade to fold one edge of a blank, and a second folding-blade to fold an adjacent edge of the blank, and means to move said former-blade from beneath said second fold as the latter blade is moving over in folding it, substantially as described.

34. In a machine for folding collars and the like, the combination with a former to hold the blank in place to be folded, of independent folding-blades to fold the adjacent end and edge of the blank, one of said blades having its corner yieldingly movable to permit it to move out of the way of the other blade, substantially as described.

35. In a machine for folding collars and the like, the combination with a former to rest on the blank to be folded, of folding-blades to fold the adjacent end and edge of the blank, means to raise said folding-blades from the folds formed thereby to permit the withdrawal of the former, and means to retract said former from beneath said folds, substantially as described.

36. In a machine for folding collars and the like, the combination with a former to rest on the blank to be folded, of folding-blades to fold the adjacent end and edge of the blank, means to raise said folding-blades from the folds formed thereby for the withdrawal of the former, means to retract said former from beneath said folds, and means to crease said folds after the withdrawal of said former, substantially as described.

37. In a machine for folding collars and the like, the combination with a collapsible former to rest on the blank to be folded, of folding-blades to infold the adjacent end and edge of the blank, and means to move inwardly from beneath the end fold the end of said former adjacent the end-folding blade, and thereafter to move the former from beneath said edge fold, substantially as described.

38. In a machine for folding collars and the like, a collapsible former comprising a middle portion and an end movable inwardly over said middle portion, the edge of the latter adjacent said end being beveled to permit said end to slide upwardly thereon, and means to move said end inwardly on said middle portion, substantially as described.

39. In a machine for folding collars and the like, the combination with a collapsible former to rest on the blank to be folded, said former when extended presenting a continuous edge without gaps, of folding-blades to fold the two ends and edge of the blank, and means to collapse said former by moving the ends of said former one toward the other from the end folds of the blank, and to move the longer edge of the former from beneath the edge fold of the blank, substantially as described.

40. In a machine for folding collars and the like, the combination with a former to rest on the blank to be folded, of folding-blades to fold the blank, and means to collapse or move inwardly the end pieces of the former, and means to move rearwardly the main body of the former from beneath the edge or front fold of the blank before the opposite back fold is made, and means to move the former from beneath said back fold when it is made, substantially as described.

41. In a machine for folding collars and the like, the combination with a former to rest on the blank to be folded, a folding-blade and means to move it to fold one edge of the blank, means to shift said former from beneath said fold and to place it for an opposite fold, a second folding-blade opposite said first blade to fold the edge of the blank opposite said first fold, and means to move it for said second fold, substantially as described.

42. In a machine for folding collars and the like, the combination with a former to rest on the blank to be folded, a folding-blade and means to move it to fold one edge of the blank, means to shift said former from beneath said fold and to place it for an opposite fold, a second folding-blade opposite said first blade to fold the edge of the blank opposite said first fold, means to move it for said second fold, and means to shift said former from beneath said second fold, substantially as described.

43. In a machine for folding collars and the like, the combination with a former to rest on a blank to be folded, of a folding-blade to fold one edge of the blank, means to raise said folding-blade from the fold, means to shift said former from beneath said fold while said blade is raised and to move it back again on top of the fold, and a second folding-blade to fold an edge opposite said first fold, substantially as described.

44. In a machine for folding collars and the like, the combination with means to hold a blank to be folded, and folding mechanism including folding-blades to fold the blank, of automatic means to lift said blades after said folding and bring them forcibly down on the folds to crease them, substantially as described.

45. In a machine for folding collars and the like, the combination with means to hold a blank to be folded, of two adjacent independent folding-blades to fold said blank at a corner, and means to move said blades for folding, one of said blades having an independently-movable corner, and means to lift said corner from the path of and as the other blade moves forward, substantially as described.

46. In a machine for folding collars and the like, the combination with a collapsible former having an end definer to rest upon a blank to be folded, means to move inwardly said end definer without moving the middle portion of the former, means to raise the former, and means to restore it to its original length, of an end-folding blade next to said end definer, and an adjacent side-folding blade, means to move them to fold the end and side edges of the blank over said former, means to move back said end-folding blade from beneath said raised former, and means to lower the latter, substantially as described

47. In a machine for folding collars and the like, the combination with a former to hold a blank to be folded, of adjacent independent folding-blades to fold said blank at a corner, and means to move said blades for said folding, one of said blades having a thin edge portion at its end adjacent said corner to permit the adjacent end of said other folding-blade to ride over it in making its fold, substantially as described.

48. In a machine for folding collars and the like, the combination with a bed to receive a blank, a cross-head over said bed, and a former carried by said cross-head and adapted to rest on said blank as the latter is being folded, of mechanism to shift said former obliquely to and from said bed without moving the blank, substantially as described.

49. In a machine for folding collars and the like, the combination with a bed to receive a blank, a cross-head over said bed, and a former carried by said cross-head and adapted to rest on said blank as the latter is being folded, of mechanism to shift said former obliquely to and from said bed, and means to restore said former in approximately the same oblique path of movement, substantially as described.

50. In a machine for folding collars and the like, the combination with a bed to receive a blank, a cross-head over said bed, and a collapsible former carried by said cross-head and adapted to rest on said blank as the latter is being folded of means to retract or move inwardly one end of said former, means to shift said former obliquely to and from said bed, and means to shift it back into vertical position over its previous lowered position, ready to be lowered again to the latter position, substantially as described.

51. In a machine for folding collars and the like, the combination with a former to rest upon a blank to be folded, independent folding-blades to fold said blank, and means to move said blades dissimultaneously to make said folds, of means to crease certain of said folds after they are made and before other of said folds are made, substantially as described.

52. In a machine for folding collars and the like, a folder mounted on the machine and carrying a folding-blade at its front edge, said folding-blade being movably mounted on said folder to move transversely thereof, and means to move said blade in its said transverse movement, substantially as described.

53. In a machine for folding collars and the like, a former, a bridge to hold it, and a hanger to support said bridge, said former comprising independent pieces having dovetailed connection with said bridge, whereby they may be adjusted along the latter toward and from each other, said pieces being adjustably secured in slotted brackets provided therefor adjacent said hangers, and extension-sections having transverse grooves in said bridge, whereby one or more of said sections may be interposed between said independent pieces, and means to lock said sections in place, substantially as described.

54. In a machine for folding collars and the like, a former, a bridge to hold it, and a hanger to support said bridge, said hanger, being provided with ways, and said bridge being adjustable on said ways transversely of said former, said former comprising independent pieces having dovetailed connection with said bridge, whereby they may be adjusted along the latter toward and from each other, said pieces being adjustably secured in slotted brackets provided therefor adjacent said hangers, and extension-sections having dovetails to enter transverse grooves in said bridge, whereby one or more of said sections may be interposed between said independent pieces, and means to lock said sections in place, substantially as described.

55. In a machine for folding collars and the like, a former, a bridge to hold it, and hangers supporting said bridge, said former comprising independent pieces longitudinally adjustable on said bridge, and said bridge being transversely adjustable on said hangers, substantially as described.

56. In a machine for folding collars and the like, a bed adapted to receive a plurality of blanks to be folded and having a former and folding mechanism for each blank, said folding mechanism including end-folding blades to fold the ends of said blanks, and means to move simultaneously one of said end blades for each of said blanks, and means to move simultaneously the other of said end blades for each of said blanks, said two sets of simultaneously-moving end blades being moved dissimultaneously, whereby one end of each blank is folded before the other end thereof, substantially as described.

57. In a machine for folding collars and the like, the combination with a former to rest on a blank to be folded, of a folder to fold an edge of the blank, said folder being pivotally mounted on the machine, means to move said folder to make a fold, and means to engage said pivoted folder as it moves into its forward folding position, said means forcing said folder down with a yielding pressure, substantially as described.

58. In a machine for folding collars and the like, a folder pivotally mounted on the machine and having a blade-like portion to engage a blank and make a fold, and yielding means intermittingly engaging said folder for maintaining it with a downward pressure when in folding position, substantially as described.

59. In a machine for folding collars and the like, the combination with a former adapted to rest on a blank to be folded, of independent folding-blades to fold the edges of the blank to make an acute-angled corner, a corner device to lay over the projecting edge

of the top one of said folds and fold it in from said corner, and means to raise said corner device above said folded-back corner and retract it from and without engaging the latter, substantially as described.

60. In a machine for folding collars and the like, the combination with a former adapted to rest on a blank to be folded, of independent folding-blades to fold the edges of the blank to make an actute-angled corner, means to move one of said blades to make its fold before the other, said second blade being provided with a projecting finger adjacent said acute-angled corner, and means to move said second blade forward to make its fold and obliquely away from said first fold, whereby its said finger folds over within the corner the projecting edge of its fold, substantially as described.

61. In a machine for folding collars and the like, the combination with a collapsible former to rest on a blank to be folded, and folding mechanism, of means to retract the middle portion of the former from beneath the folded edge and to raise it, and means to move inwardly toward each other the end portions of the former from beneath the end folds, substantially as described.

62. In a machine for folding collars and the like, the combination with a collapsible former to rest on a blank to be folded, and folding mechanism, of means to retract the middle portion of the former from beneath the folded edge and to raise it, means to move inwardly toward each other the end portions of the former from beneath the end folds, and means thereafter to separate said end portions and to lower the middle portion in line therewith as before, substantially as described.

63. In a machine for folding collars and the like, the combination with a collapsible former, of means to move the middle portion thereof obliquely upward, and means to move an end portion of the former obliquely forward into longitudinal alinement with said middle portion, substantially as described.

64. In a machine for folding collars and the like, a collapsible former having separate end and side portions normally extended and having an unbroken forming edge or perimeter, and means to collapse said separate portions and move them relatively inward toward each other, whereby the normal perimetar of the former is contracted, substantially as described.

65. In a machine for folding collars and the like, a collapsible former composed of interlocked separate pieces, and means to disengage said pieces from their interlocked position and move them inwardly toward each other, to shorten the perimeter of the former, substantially as described.

66. In a machine for folding collars and the like, a former, a frame carrying it, a support in which said frame is movable, said former having sliding connection with said frame, a bell-crank mounted on said support and connected to said former, and means to move said bell-crank independently of said frame, whereby the former is shifted in its sliding engagement with said frame, substantially as described.

67. In a machine for folding collars and the like, a former, a frame carrying it, a support in which said frame is movable, said former having sliding connection with said frame, a bell-crank mounted on said support and connected to said former, and means to move said bell-crank independently of said frame, whereby the former is shifted in its sliding engagement with said frame, said moving means including a plunger mounted on said support, and tripping means carried by said frame intermittingly to engage said plunger, substantially as described.

68. In a machine for folding collars and the like, a former, a frame carrying it, a support in which said frame is movable, said former having sliding connection with said frame, a bell-crank mounted on said support and connected to said former, and means to move said bell-crank independently of said frame, whereby the former is shifted in its sliding engagement with said frame, said moving means including a plunger mounted on said support, tripping means carried by said frame intermittingly to engage said plunger, and a spring normally holding said plunger in one extreme position to be engaged by said tripping means and moved in an opposite position by the movement of said frame, substantially as described.

69. In a machine for folding collars and the like, a collapsible former comprising a middle portion and opposite end portions, and means to swing said end portions relatively to said middle portion, whereby the angle of their adjustment is changed, substantially as described

70. In a machine for folding collars and the like, a former comprising a middle portion and end portions, said middle portion being composed of two independent pieces longitudinally adjustable from each other, means to correspondingly adjust said end portions, and extension-sections to be inserted between the separated middle pieces, substantially as described.

71. In a machine for folding collars and the like, the combination with a collapsible former having separate end and side portions, each comprising two or more independent pieces of means independently to move said pieces, whereby the perimeter of said former may be contracted, substantially as described.

72. In a machine for folding collars and the like, folding devices to fold a blank, a collapsible former having two longitudinal portions adapted to form and define the top and bottom respectively of a stand-up collar or the like, and mechanism to move said longitudinal portions independently from beneath the folds made over the same by said folding mechanism, substantially as described.

73. In a machine for folding collars and the like, folding devices to fold a blank, and a former comprising a longitudinal part and an end portion, the latter including two independent pieces, combined with mechanism to move said middle part from beneath a fold or folds of the blank and raise it thereover, and means independently to move said end pieces from beneath the adjacent folds into position beneath said raised middle part, substantially as described.

74. In a machine for folding collars and the like, the combination with means to hold the blank in place to be folded, of a folding-blade to fold an edge of said blank, said blade having a movable plate constituting a portion of its folding edge, and means to move said plate laterally relatively to the rest of said blade, substantially as described.

75. In a machine for folding collars and the like, the combination with means to hold a blank in place to be folded, of a folding-blade to fold an edge of the blank, a gatherer carried by said blade to embrace a fold of the blank, and means to move said gatherer relatively to said blade for creasing down said gathered fold, substantially as described.

76. In a machine for folding collars and the like, the combination with a former to hold a blank in place to be folded, of a folder having its front edge constituting a folding-blade to fold the adjacent edge of said blank, a portion of said front edge being vertically movable therefrom, and a block on said former in front of said movable portion, said block being inclined at its front edge to cause said movable portion to ride up on the block, and said block having a free limited movement on said former, in order to carry said movable portion back a portion of its movement in raised position, to free it from the infold of the blank, substantially as described.

77. In a machine for folding collars and the like, the combination with a former to hold a blank to be folded, and independent folding-blades to fold said blank at a corner, of means to raise an A-shaped portion of the blank at the corner being folded, and to lay over said A shaped portion, back from the corner, substantially as described.

78. In a machine for folding collars and the like, the combination with a former to hold a blank to be folded, of two folding-blades to fold adjacent edges of the blank, one of said blades having a movable portion at its front edge adjacent the meeting corner of said blades, an upturned knife-edge being carried on said movable portion, said other holding-blade having cooperating fingers to crease the material of the blank down at each side of said knife-edge, and means to move the blade carrying said movable portion first, and means subsequently to move the blade carrying said fingers, substantially as described.

79. In a machine for folding collars and the like, a former, a carriage and its folding-blades to cooperate with said former in folding a blank, and means to vertically lift one edge of said carriage to permit the withdrawal of said former, substantially as described.

80. In a machine for folding collars and the like, a former to rest on a blank to be folded, independent folding-blades to fold the blank, and operating mechanism including a rock-shaft, means to rock it, cams on said shaft, and independent lifting-bars from said cams to said independent folding-blades, whereby said folding-blades are independently lifted, substantially as described.

81. In a machine for folding collars and the like, a former to rest on a blank to be folded, independent folding-blades to fold the blank, and operating mechanism including a rock-shaft, means to rock it, cams on said shaft, and independent lifting-bars from said cams to said independent folding-blades, whereby said folding-blades are independently lifted, said cams being provided with movable cam projections, and means to hold said cam projections extended when the rock-shaft turns in one direction, and to permit them to be depressed when the rock-shaft turns in an opposite direction, whereby the lifting movements of said blades differ with the rocking of said shaft, substantially as described.

82. In a machine for folding collars and the like, a former to rest on a blank to be folded, independent folding blades to fold the blank, and operating mechanism including a rock-shaft, means to rock it, cams on said shaft, independent lifting-bars from said cams to said independent folding-blades, whereby said folding-blades are independently lifted, and a second rock-shaft receiving motion from said rocking means, and independent connections between said independent blades and said second shaft to move said blades toward and from said former, substantially as described.

83. In a machine for folding collars and the like, a former to rest on a blank to be folded, independent folding-blades to fold the blank, and operating mechanism including a rock shaft, means to rock it, cams on said shaft, independent lifting-bars from said cams to said independent folding-blades, whereby said folding-blades are independently lifted, lifting-bars for said former, and connections between the latter lifting-bars and said rock-shaft, for lifting said bars, substantially as described.

84. In a machine for folding collars and the like, a positioning device to properly place a blank in the machine, a former to engage the blank, folding-blades to fold the blank over said former, and operating mechanism therefor including a rock-shaft, lifting-bars operated therefrom to lift said blades, lifting-bars to lift said former, operating connections between the latter bars and said rock-shaft, and lifters extending from said latter bars to engage said positioning device, whereby the latter is lifted and lowered at the same time with said former, substantially as described.

85. In a machine for folding collars and the like, folding mechanism to fold a blank, and means to shift said folding mechanism, said means including a rock-shaft and a T-lever, said rock-shaft being provided with a bell-crank having at its opposite ends dogs pivotally mounted thereon to move away from each other and hold against movement toward each other, and means tending to maintain said dogs in radial position, whereby as said shaft rocks it causes the forward dog to engage and move the depending arm of the T-lever, and the following dog yields and passes said T-lever, being automatically restored for the return movement, substantially as described.

86. In a machine for folding collars and the like, an end-folder to fold the end of a blank, a track along which said folder slides, a rock-shaft and lever to move said folder on said track, a roll depending from one end of said rock-shaft, and a rocker-arm having a latch-like projection to engage said roll, said projection being pivoted to move the roll in one direction and to yield in the other direction, substantially as described.

87. In a machine for folding collars and the like, a bed provided with longitudinal ways and comprising independent receiving-plates movable on said ways, said plates being formed to receive a blank to be folded, and spacing-blocks to enter between the separated receiving-plates, substantially as described.

88. A bed provided with longitudinal ways and transverse ways, and having independent receiving-plates movable on said longitudinal ways, said plates being formed to receive a blank to be folded, means cooperating with said plates to move them, and spacing-blocks movable on said transverse ways to enter between the separate receiving-plates, said blocks and the adjacent ends of said receiving-plates being provided with interlocking shoulders, substantially as described.

89. A bed provided with longitudinal ways and transverse ways, and having independent receiving-plates movable on said longitudinal ways, said plates being formed to receive a blank to be folded, and spacing-blocks movable on said transverse ways to enter between the separate receiving-plates, said blocks and the adjacent ends of said receiving-plates being provided with interlocking shoulders, said plates and blocks and their said ways being dovetailed together, substantially as described.

90. In a machine for folding collars and the like, a table having a receiving shelf and a delivering-shelf, said shelves being provided with transverse ways to receive the lugs of feeding-plates, said receiving-shelf also having automatic means to engage and retain a plate delivered thereto, substantially as described.

91. In a machine for folding collars and the like, a table having a receiving-shelf and a delivering-shelf, said shelves being provided with transverse ways to receive the lugs of feeding-plates, said receiving-shelf also having automatic means to engage and retain a plate delivered thereto, and said delivering-shelf having buffers against which the lugs of the plates may rest as they are seized by the feeding mechanism of the machine, substantially as described.

92. In a machine for folding collars and the like, the combination with a table provided with receiving and delivering shelves, of a feeding-plate provided with depending lugs, said shelves having ways formed therein registering with said lugs to receive the latter and thereby retain the plate respectively for delivery and as it is received, the delivering-shelf being provided with buffer-blocks to engage said lugs, and a yielding device normally holding said blocks forward from the ends of said ways, substantially as described.

93. In a machine for folding collars and the like, a former composed of a plurality of adjustable forming portions, and means to change the shape of said former by their adjustment, substantially as described.

94. In a machine for folding collars and the like, a former to form a blank to be folded, said former including two independent pieces longitudinally adjustable from each other, and extension-sections to be inserted between said pieces, substantially as described.

95. In a machine for folding collars and the like, folding mechanism to fold a blank, and means to shift said folding mechanism, said means including a T-lever, a shaft, and movable dogs pivotally mounted on said shaft to move from their normal position in one direction, means to prevent said dogs from moving from said normal position in an opposite direction, and means tending to maintain said dogs in said normal position, to engage a depending arm of said T-lever, whereby, as said shaft moves, one dog engages said depending arm of the T-lever and moves it, and the other dog yields and passes said T-lever, being automatically restored for the return movement, substantially as described.

96. In a machine for folding collars and the like, a bed provided with longitudinal ways and transverse ways, and independent receiving-plates moving on said longitudinal ways, said plates being formed to receive a blank to be folded, and spacing-blocks movable on said transverse ways to enter between the separated receiving-plates, substantially as described.

97. In a machine for folding collars and the like, a bed provided with longitudinal ways and transverse ways, and independent receiving-plates moving on said longitudinal ways, said plates being formed to receive a blank to be folded, and spacing-blocks movable on said transverse ways to enter between the separated receiving-plates, said blocks and the adjacent ends of said receiving-plates being provided with interlocking shoulders, substantially as described.

98. The cross-head, and its attached multipart former having a middle portion and independent end pieces to descend on the blank to be folded, means to move said end pieces in a straight line one toward the other, and relatively to said middle portion, and automatic means to operate said cross-head up and down, substantially as described.

99. In a machine for folding collars and the like, a movable cross-head, and its attached multipart former, and mechanism carried by said movable cross-head for automatically collapsing said multipart former, substantially as described.

100. In a machine for folding collars and the like, a movable cross-head, and former carried thereby and movable relatively to said cross-head, and mechanism for automatically moving said former relatively to said cross-head, substantially as described.

101. In a machine for folding collars and the like, a movable cross-head, and former carried thereby and movable relatively to said cross-head, and mechanism for automatically moving said former relatively to said cross-head, said mechanism including means for giving said former a compound lateral and rearward movement, substantially as described.

102. In a machine for folding collars and the like, a movable cross-head, and former carried thereby and movable relatively to said cross-head, and mechanism for automatically moving said former relatively to said cross-head, said mechanism including means for giving said former a compound lateral and forward-and-rearward movement, substantially as described.

103. In a machine for folding collars and the like, a movable cross-head, and former carried thereby and movable relatively to said cross head, and mechanism for automatically moving said former relatively to said cross-head, said mechanism including means for shifting said former from beneath certain of the folds of a blank being folded, and means for momentarily raising said former from the blank, substantially as described.

104. In a machine for folding collars and the like, a movable cross-head, a rotary shaft journaled therein, a former carried by said cross-head and movable relatively thereto by said shaft, and means for rotating said shaft, substantially as described.

105. In a machine for folding collars and the like, a movable cross-head, a rotary shaft journaled therein, a former carried by said cross-head and movable relatively thereto by said shaft, and means for intermittingly rotating said shaft, substantially as described.

106. In a machine for folding collars and the like, a carrier for feeding the blanks to the machine, a plurality of cross-heads, each cross-head being provided with a former for engaging and holding said blanks, mechanism for alternately moving said cross heads up and down, and means to operate said carrier intermittingly as one or the other of said cross-heads is in raised position, substantially as described.

107. In a machine for folding collars and the like, a carrier for feeding the blanks to the machine, a plurality of cross-heads, each cross-head being provided with a former for engaging and holding said blanks, mechanism for alternately moving said cross-heads up and down, and means to operate said carrier intermittingly as one or the other of said cross-heads is in raised position, said cross-heads having a dwell or period of rest in their raised positions during the operation of said carrier, substantially as described.

108. In a machine for folding collars and the like, a plurality of cross-heads, means to intermittingly raise said cross-heads out of time with each other, whereby one is up when another is down, feeding mechanism for carrying the blanks, and means for operating said feeding mechanism to deliver a folded blank from the machine and carry an unfolded blank to the machine as each cross-head is in raised position, substantially as described.

109. In a machine for folding collars and the like, a plurality of sets of folding mechanisms, a plurality of formers cooperating therewith, and mechanism for automatically operating said several sets of folding mechanisms and formers out of time with each other, whereby folding operations are proceeding automatically and continuously in the machine, substantially as described.

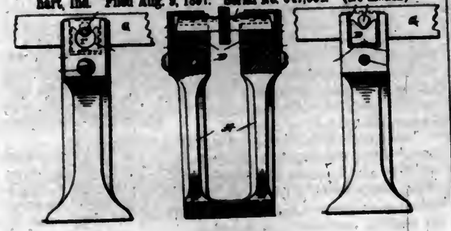
110. In a machine for folding collars and the like, a plurality of sets of folding mechanisms, a plurality of formers cooperating therewith, and mechanism for automatically operating said several sets of folding mechanisms and formers out of time with each other, whereby folding operations are proceeding automatically and continuously in the machine, feeding mechanism for carrying the blanks to the machine and delivering them therefrom, and means for operating said feeding mechanism to cooperate successively with said plurality of sets of mechanisms for supplying and delivering blanks at the proper time for each of said sets of mechanism, substantially as described.

111. In a machine for folding collars and the like, a former to rest upon and hold stationary a blank to be folded, said former having a narrow single-piece end for defining a narrow end of the blank, such as a collar-tab or the end of a collar-band, mechanism for infolding said blank at said end, other mechanism for infolding the rest of said blank, and means to withdraw said former from beneath the folds of said tab or narrow end of the blank in the direction of the length of said narrow end, after said end has been folded and before the entire folding operation is completed, substantially as described.

112. In a machine for folding collars and the like, the combination with a former to rest on a blank to be folded, a plurality of folding-blades for infolding a plurality of the ends and edges of the blank, mechanism for moving said blades dissimultaneously, and means for shifting said former from beneath a fold before another fold is made and to place it for said other fold before the folding-blade operates to make the said latter fold, substantially as described.

113. In a machine for folding collars and the like, the combination with a former to rest on a blank to be folded, of a plurality of folding-blades for infolding a plurality of the ends and edges of the blank, mechanism for moving said blades dissimultaneously, and means for shifting said former from beneath and placing it on top of one fold and in place for another fold before said other fold is infolded, substantially as described.

114. In a machine for folding collars and the like, the combination with a former to rest on a blank to be folded, of a plurality of folding-blades, mechanism for moving said blades dissimultaneously, means for shifting said former from beneath one fold into position for another fold, and means for holding the blank against displacement during said shifting movement of the former, substantially as described.



115. In a machine for folding collars and the like, a plurality of folding-blades for infolding the various ends and edges of the blank, and automatic mechanism for moving said blades in succession to make the folds one after the other with the ends of the first fold overlapped by subsequent folds, and the last fold overlapping the preceding folds, substantially as described.

116. In a machine for folding collars and the like, a plurality of folding-blades for infolding the various ends and edges of the blank, automatic mechanism for moving said blades in succession to make the folds one after the other with the ends of the first fold overlapped by subsequent folds, and the last fold overlapping the preceding folds, a former for holding the blank as it is being infolded, and means for shifting said former at times from beneath a fold and placing it for a subsequent fold, said shifting movements taking place between successive folding movements of the blades, substantially as described.

117. In a machine for folding collars and the like, the combination with a former to rest on a blank to be folded, of a folder to fold an edge of the blank, said folder including a blade to do the folding, means to move the blade into folding position, and a spring depressing said blade when in said folding position, substantially as described.

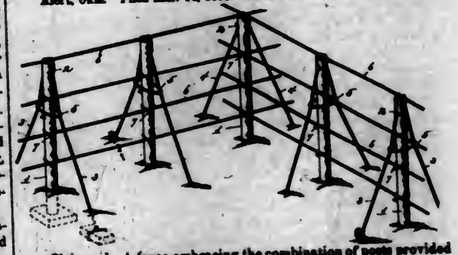
118. In a machine for folding collars and the like, the combination with a former to rest on a blank to be folded, of a folder to fold an edge of the blank, said folder including a blade to do the folding, means to move the blade into folding position, and a spring depressing said blade when in said folding position, and means to relieve the blade from its depressed condition when the folding is completed, substantially as described.

606,529. SCALE FULCRUM AND BEARING. EDWIN FIER, Elkhart, Ind. Filed Aug. 9, 1897. Serial No. 647,601. (No model.)

Claim.—1. An improved scale-bearing, including a bearing-block having a raised central pivotal support upon which it is adapted to oscillate horizontally, the top surface of the block being grooved centrally in direction of its length to receive a scale-trunnion, the block being free to oscillate vertically in direction of its length, and means for holding the block against oscillation in the direction of its width, substantially as shown and described.

2. An improved scale-bearing, including a bearing-block, and alined bottom and side bearings over and between which, respectively, the block is mounted, whereby the same is adapted to oscillate vertically and horizontally, substantially as shown and described.

3. An improved scale-bearing including a support formed with a socket, a bearing-block pivoted centrally above the socket-bottom and of less width than the socket so as to oscillate horizontally therein, the block being capable of free vertical oscillation in the direction of its length, and means for holding the block against vertical oscillation in the direction of its width, substantially as shown and described.



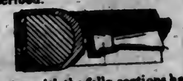
4. An improved scale-bearing, including an angular bearing-block formed with a central bottom depression, a cone bearing upon which the depressed bottom is centered and oppositely-facing upright knife-edge bearings adapted to engage opposite sides of the bearing-block, whereby the latter is sustained in upright position and capable of frictionless vertical and horizontal oscillation, substantially as shown and described.

5. An improved scale-bearing, including a support formed with a socket, a nib raised centrally from the socket-bottom, a bearing-block centered on the nib and of less width than the socket so as to oscillate horizontally therein, the block being grooved centrally on its top from end to end and capable of vertical oscillation in the direction of the length of the groove, and bearings on opposite sides of the block for maintaining the same in upright position and against oscillation in the direction of its width, substantially as shown and described.

6. An improved scale-bearing comprising a bifurcated fulcrum-post having vertical inwardly-extending projections on opposite sides of the bifurcation, and a bearing-block within and of less width than the bifurcation, and centered at a point in line with said inwardly-extending vertical projections, substantially as shown and described.

7. An improved scale-bearing comprising a bifurcated fulcrum-post having vertical inwardly-extending projections on opposite sides of the bifurcation, and a bearing-block between said projections, and centered above the bifurcation bottom, whereby said block is held in upright position and free to oscillate vertically and horizontally, substantially as shown and described.

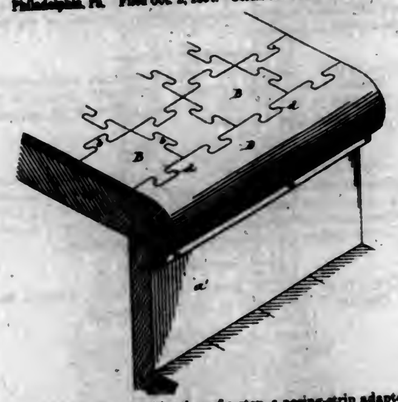
606,530. FENCE. ALBERT FLEMMER and JOSEPH L. CRESLER, Alert, Okla. Filed Mar. 14, 1898. Serial No. 673,845. (No model.)



Claim.—1. A fence embracing the combination of posts provided with inclined perforations, guys or stays having one end anchored in the ground and the other extending through the perforations, and a wire or rail of the fence around which the guys are extended, substantially as described.

2. A fence involving in its structure the combination of hollow posts, guys or stays having one end anchored in the ground and the other connected with the top of the post, and a rail arranged above the top of the post, and a tension wire or clamp to take up the slack of the guys or stays, substantially as described.

3. A fence involving in its structure the combination of a hollow post, guys or stays having one end anchored in the ground and the other connected with the top of the post and the top rail of the fence, the upper end of the guy-wire being passed through the side and top of the post, around the top wire or rail of the fence, and down between the post and the guy-wire to produce a bite between the post and the guy, substantially as described.

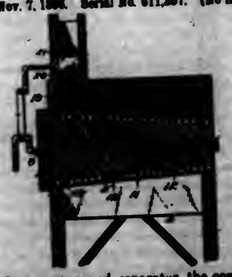


606,531. VEHICLE-WHEEL. JULIAN A. FOSTER, Salem, Wis. Filed July 10, 1897. Serial No. 644,006. (No model.)

Claim.—1. A clip for the purpose described, comprising a plate, legs extended therefrom and having their extremities corrugated on opposite sides and adapted to overlap when positioned upon the felly, substantially as described.

2. The combination with the felly-sections having elongated slots, of the elongated plate provided with slots registering with the slots in the felly, said plate being adapted to be positioned upon the felly, said plate having legs extended therefrom and adapted to be overlapped on the opposite side of the felly, the overlapping portions being corrugated and beveled on opposite sides, substantially as described.

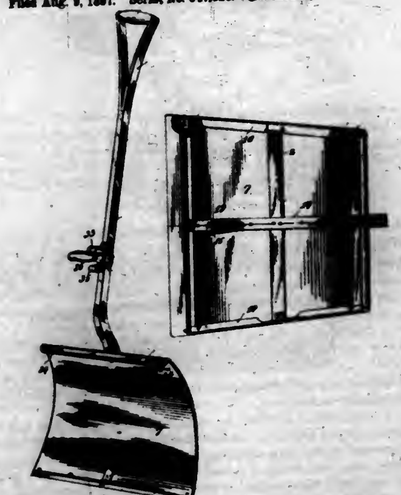
606,532. NOSING-STRIP FOR STAIRWAYS. FRANK FURSTON, Philadelphia, Pa. Filed Oct. 2, 1897. Serial No. 653,753. (No model.)



Claim.—1. The combination of a step, a nosing-strip adapted to the nosing of the step and having notches in one edge, with a tread-section meshing with the notches in the edge of the nosing-strip, substantially as described.

2. The combination of a step, a strip of rubber or equivalent material adapted to be secured to the nosing of a step, having its upper edge extended, with undercut recesses in the extended edge and means on the tread with which the undercut portions of the nosing-strip engage, substantially as described.

3. The combination of a step, interlocked rubber tiles thereon, a rubber nosing-strip adapted to the nosing of the step and locked to the tiles, substantially as described.



606,538. COTTON-SEED SEPARATOR. JAMES A. GARRETT, Troy, Tex. Filed Nov. 7, 1896. Serial No. 611,267. (No model.)

Claim.—1. In a cotton-seed separator, the combination of the horizontal conical drum armed with spiral rows of fingers or spikes, the horizontal conical cylinder formed with transverse perforations presenting an abrading and sifting surface, and a uniform working space between itself and the cylinder from feed to discharge, whereby the area of said working space is gradually contracted from feed to discharge and the mutual pressure and attrition of the material under treatment is maintained, and a feeder placed at the larger end of the separating-cylinder, substantially as set forth.

2. In a cotton-seed separator, the combination of an open bottom casing, a stationary horizontal conical separating-cylinder arranged within the casing out of contact with the top and sides thereof and formed with transverse perforations presenting an abrading and sifting surface, a horizontal conical drum arranged within the cylinder and armed with spiral rows of fingers or spikes, said drum forming between its periphery and the perforate cylinder a uniform working space extending from feed to discharge whereby the area of said working space is gradually contracted from feed to discharge and the mutual pressure and attrition of the material under treatment is maintained, and a feeder placed at the larger end of the cylinder, substantially as set forth.

606,584. SNOW-SHOVEL. JOHN GIFFORD, Watertown, N. Y. Filed Aug. 9, 1897. Serial No. 647,628. (No model.)

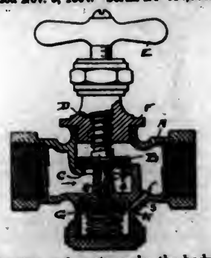
Claim.—1. In a snow-shovel, a blade comprising a frame composed of a series of parallel wooden bars connected at their ends by side rods, and a metal sheet secured upon said frame, substantially as described.

2. In a snow-shovel, a blade comprising a frame composed of a series of parallel wooden bars connected at their ends by side rods, and a metal sheet having its edge portions folded over upon said bars and side rods, substantially as described.

3. In a snow-shovel, a blade comprising a frame composed of a series of parallel wooden bars connected at their ends by side bars, a metal sheet having its edge portions folded over upon said bars and side rods, and a strip of hardened metal secured to the front edge of the metal sheet, substantially as described.

4. In a snow-shovel, a blade comprising a frame composed of a series of parallel wooden bars connected at their ends by side rods, and a metal sheet secured upon the upper face of said frame, combined with a handle secured to the lower face of the frame substantially midway its width, and a metal loop fitted over the front edge of the blade and the front end of the handle and secured thereto, substantially as described.

5. In a snow-shovel, a blade comprising a frame composed of a series of parallel wooden bars connected at their ends by side rods, and a metal sheet secured upon the upper face of said frame, combined with a handle abutting at its front end against the rear edge of the front bar of the frame, and secured to the lower faces of the other bars, and a metal loop fitted over the front edge of the blade and the front end of the handle and secured thereto, substantially as described



6. In a snow-shovel, the combination with the handle, of a U-shaped slide fitted upon the handle, a hand-grip frame eccentrically pivoted between the arms of the slide, and a spring loosely fitted between the lower face of said frame and the upper face of the handle, substantially as and for the purpose specified.

7. In a snow-shovel, the combination with the handle, of a U-shaped slide fitted upon the handle, a hand-grip frame having a U-shaped portion eccentrically pivoted between the arms of said slide, a spring loosely fitted between the said U-shaped part of the frame and the handle, said spring having a downwardly-curved portion to bite the handle when the hand-grip frame is rocked rearwardly upon it, substantially as and for the purpose specified.

8. In a snow-shovel, the combination with the handle, of a

U-shaped slide fitted upon the handle, a hand-grip frame having a U-shaped portion eccentrically pivoted between the arms of said slide, the arms of said slide and U-shaped part of the frame having slots in their rear edges adapted to register when the said frame is in a vertical position, a spring loosely fitted between the said U-shaped part of the frame and the handle, said spring comprising a horizontally-disposed portion to slide on the handle, and two spaced vertically-disposed loops between which the hand-grip frame is supported, and a pin secured in the rear vertical loop to engage in said slots when they register, substantially as described.

606,585. STOP AND WASTE COCK. JOSEPH H. GLAUSER, Cleveland, Ohio. Filed Nov. 9, 1897. Serial No. 657,990. (No model.)

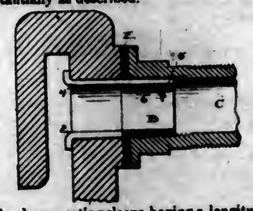
Claim.—1. In stop and waste cocks, the body of the cock constructed with two parallel diaphragms having a space between them constantly open to water-pressure, and a tubular projection from one of said diaphragms into said water-space and the main-valve seat on the other diaphragm, substantially as described.

2. The body of the cock having two diaphragms and a waste-chamber beneath the same, one of said diaphragms having a passage for the water and the other a projection into the space between said diaphragms and open through its center into the said waste-chamber, substantially as described.

3. The body of the cock provided with two diaphragms, one of said diaphragms having a seat for the main valve and a waste-chamber covered by the other diaphragm in which is a central passage opening into said waste-chamber, in combination with the waste-valve, the main valve and a close-fitting projection extending through said central passage and engaging said waste-valve, substantially as described.

4. The body of the cock having two diaphragms with an open water-pressure space between them, and a waste-chamber beneath the lower of said diaphragms having its waste at the top, in combination with a main valve seated on the upper diaphragm and an exhaust-valve seated on the lower diaphragm to close said outlet, and a projection from the main valve engaging the waste-valve, substantially as described.

5. The body of the cock having the main-valve diaphragm therein, and a waste-chamber having a diaphragm closing the top thereof, the main valve and the waste-valve arranged to seat toward each other on said diaphragms respectively, and a waste-outlet between said valves controlled by the waste-valve, and a projection from the main valve engaging the waste-valve to open the same, substantially as described.



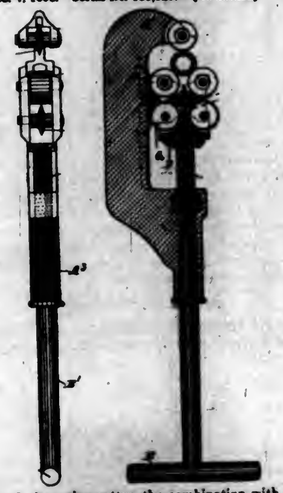
6. A stop and waste cock having one diaphragm dividing said cock into water-pressure and exhaust sides and provided with a valve-seat and a valve opening to the exhaust side from said seat, a waste-valve chamber opposite said seat and a separate diaphragm over the same separating said chamber from the water-pressure side of the cock, a valve in said chamber and means to open said valve connected with the main valve, substantially as described.

7. The body of the cock provided with a main-valve diaphragm across its center and a valve seated on the exhaust side of said diaphragm, a waste-chamber beneath said main valve and a diaphragm closing it from the water pressure over the same, a waste-valve in said waste-chamber and means extending to the main-valve stem to open the waste-valve, substantially as described.

606,586. PIPE-COUPLING FOR BROKEN WATER-CLOSET BOWLS. JOSEPH H. GLAUSER, Cleveland, Ohio. Filed Dec. 24, 1897. Serial No. 663,411. (No model.)

Claim.—1. The coupling for water-closet bowls consisting of a sleeve having a hook integral therewith and a channel constructed to engage a removable hook at different points therein, in combination with a removable hook embedded in said channel, substantially as described.

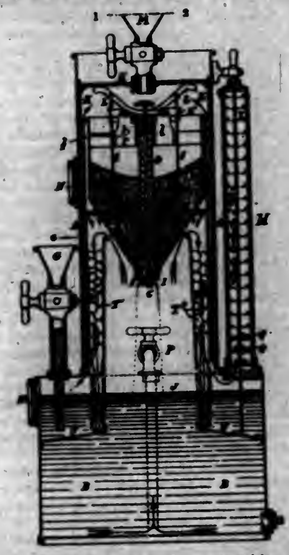
2. The sleeve, substantially as described, having an integral hook projecting from its inner portion, and a longitudinal channel on its outside and encircling threads, in combination with an independent hook locked in said channel beneath the engaging portion of the said threads substantially as described.



3. The hook-supporting sleeve having a longitudinal channel on its outside and a thread around said sleeve across said channel, in combination with a hook locked in said channel and embedded therein beneath the thread crossing the same, whereby connection between hook and sleeve is made without threading the back of the hook, substantially as described.

606,587. CIGARETTE. HENRY GOLDSWARD, London, England. Filed Oct. 4, 1897. Serial No. 654,056. (No model.) Patented in England Sept. 15, 1893, No. 17,257, and Nov. 2, 1893, No. 20,807, and in Germany Nov. 6, 1894, No. 83,862.

Claim.—A cigar or cigarette having a plug of absorbent material located near the end to be placed in the mouth and also provided with a mouthpiece composed of straw split and cemented to a retaining-band, said mouthpiece being cemented to the outside of the wrapper of the cigar or cigarette, substantially as described.



606,588. PIPE-CUTTER. DAVID S. GRANT, Methuen, Mass. Filed Feb. 7, 1898. Serial No. 669,826. (No model.)

Claim.—1. In a pipe-cutter, the combination with a frame having a disk cutter journaled in its upper end and provided on its opposite sides with longitudinal ribs having inclined slots or recesses formed intermediate their ends, of a reversible carrier-block longitudinally adjustable on said frame and having rollers in one end and cutter-disks in the other, said carrier-block being provided with hooked extensions arranged to engage the rear or outer faces of the ribs and adapted to be passed through the said slots or recesses therein to reverse the carrier-block, and means for adjusting said reversible frame to and from the upper cutter-disk, substantially as described.

2. In a pipe-cutter, the combination with a frame having a disk cutter journaled in its upper end and provided on its opposite sides with longitudinal ribs having inclined slots or recesses formed intermediate their ends, of a reversible carrier-block longitudinally adjustable on said frame and having rollers in one end and cutter-disks in the other, said carrier-block being provided with hooked extensions arranged to engage the rear or outer faces of the ribs and adapted to be passed through the said slots or recesses therein to reverse the carrier-block, a support detachably connected to the carrier-block, and a screw-threaded shank working in a nut in the frame and swiveled in said support for adjusting the position of the reversible block to and from the upper cutter, substantially as described.

606,589. APPARATUS FOR GENERATING ACETYLENE GAS. OSCAR GRISSER and JULIUS GRAEB, Lyons, France. Filed Oct. 26, 1896. Serial No. 610,466. (No model.) Patented in France Mar. 30, 1896, No. 255,154; in England Aug. 13, 1896, No. 17,904; in Italy Sept. 30, 1896, LXXXIII, 445; in Belgium Sept. 30, 1896, No. 123,606; in Luxemburg Oct. 9, 1896, No. 2,633; in Spain Nov. 21, 1896, No. 19,695; in Switzerland Feb. 26, 1897, No. 13,068; in Austria July 8, 1897, No. 47/2,649, and in Hungary July 15, 1897, No. 8,552.

Claim.—1. An acetylene-gas producer, comprising a generating vessel having an enlarged lower portion containing water, a bell having its open lower end placed in an annular chamber containing a suitable fluid and raised above the water-chamber, a distributer rigidly supported in said bell and provided with a funnel-shaped lower end, a spring-closed, tapered plug to close the outlet at said lower end, said means actuated by the opening of said plug to break up any choking of the granulated material and feed the latter in uniform quantities to the gas-generating chamber, substantially as described.

2. In an acetylene gas producer, the combination with a generating-chamber containing water of a bell rising above the said generating-chamber, its open lower end lying in a fluid in an annular chamber arranged above the water, a distributer rigidly supported in the upper part of said bell and having a funnel-shaped lower end, a tapered, spring-pressed plug to close the outlet in said lower end, a central, vertical cylinder to inclose the spring acting on said plug, a plurality of spatulæ hanging in said funnel-shaped end, levers pivoted at the top of the distributer to support said spatulæ their movable ends resting on the under surface of the closed top of the bell, and a stem in the central tube having its upper end connected to and rising above the levers between their pivoted ends and the points of suspension of the spatulæ, substantially as described.

3. In an acetylene-gas producer, the combination with a generating-chamber of a bell rising above the same, its open lower end lying in fluid in an annular chamber above the generating-chamber, a distributer having a funnel-shaped discharge end, a central tube inclosing a spring, a tapered plug connected to the spring and seated by it in the outlet, spatulæ suspended in the distributer with their ends a little above the outlet, levers pivoted at their ends in the upper end of the distributer and having the spatulæ suspended from them at points between the pivoted ends and free ends, and a stem connected to said levers and to the spring-seated plug, substantially as described.

4. In an acetylene-gas producer, the combination of the water-reservoir B having thereon the drier-cylinder H provided with perforated diaphragms Y, the annular water vessel A having the bell K inverted therein and supported above the reservoir B, the annular washer-chamber T supported in and concentric with the vessels A and B, the suspended distributing vessel D, a spring-actuated plug C to control the discharge-orifice of said distributing vessel D, and spatulæ S suspended in said distributing vessel from levers connected with the vertically-extended stem of the said plug, substantially as described.

606,540. DIRT-SCRAPER. FREDERICK GROTE, Huntingburg, Ind. Filed Nov. 2, 1897. Serial No. 657,194. (No model.)

Claim.—A road or dirt scraper, comprising two sides or runners, a top or cover, a vertical scraper at its rear end, a depending vertical flange at its front end, a lift or handle, means at the front ends for attaching a draft-animal and a rod, or stay, extending transversely from one rod to the other in front, substantially as described.

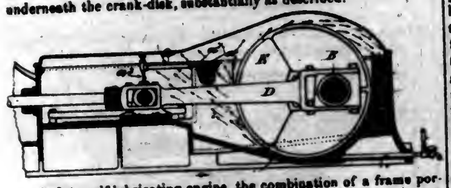
606,541. VELOCIPEDE. WILLIAM J. GROTENHUIS and HENRY T. SIDWAY, Chicago, Ill. Filed Apr. 13, 1897. Serial No. 631,869. (No model.) Patented in England Apr. 27, 1897, No. 10,471, and in France Apr. 27, 1897, No. 266,381.

Claim.—1. In a handle-bar for velocipedes, the combination of an elastic core formed of a series of metallic strips longitudinally arranged, a ring for rigidly securing the ends of one portion of the longitudinal strips together, a cup-shaped disk flexibly securing the other ends of the metallic strips together, an expanding cylindrical block adapted to be inserted into the handle-bar and provided with one or more indentations, projections on the cup-shaped disk adapted to enter the indentations on the block, and means for securing the cup-shaped disk to the block to expand the same and hold the parts in operative position, substantially as described.

2. In a handle for velocipedes, the combination of an elastic core formed of a series of metal strips longitudinally arranged and secured rigidly together at one end by means of a securing-ring and provided with bayonet-shaped free ends, a cup-shaped end portion having a series of strips formed integrally with a base portion—the free ends of such strips having indentations perforations or openings adapted to receive the bayonet-shaped ends of the metallic strips and flexibly secure the parts together, substantially as described.

606,542. PRINTING-INK. FRANCIS B. HALL, Plattsburg, N. Y. Filed Jan. 20, 1898. Serial No. 667,232. (No specimens.)

Claim.—1. A vehicle for pigment or coloring-matter, consisting essentially of sugar and water and salicylic acid, in substantially the proportions specified, the sugar being largely in excess of the water, and the acid being not materially less than three per cent. of the mass, substantially as hereinbefore set forth.

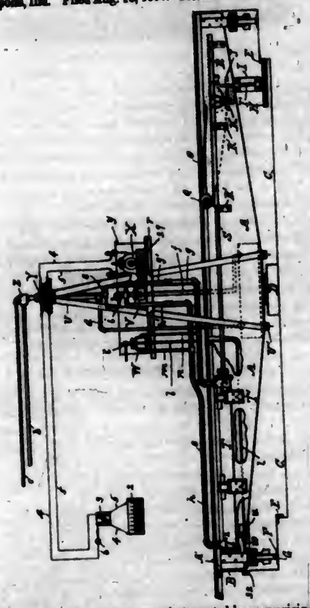


2. A vehicle for pigment or coloring-matter consisting essentially of sugar, gum-arabic, water and salicylic acid in substantially the proportions specified, the sugar being largely in excess of the water and gum-arabic and the acid being not materially less than three per cent. of the mass, substantially as hereinbefore set forth.

3. A composition of matter consisting of water, sugar, gum-arabic and salicylic acid in substantially the proportions stated, the sugar being largely in excess of the water and gum-arabic and the salicylic acid being not materially less than three per cent. of the mass, in conjunction with a suitable pigment or coloring-matter, substantially as hereinbefore set forth.

4. A composition of matter consisting of water, sugar, gum-arabic and salicylic acid taken in the proportions substantially as specified, the sugar being largely in excess of the water and gum-arabic, and the acid being not materially less than three per cent. of the mass, in conjunction with a pigment or coloring-matter, and glycerin, substantially as hereinbefore set forth.

606,548. SELF-LUBRICATING ENGINE. ELMER E. HANNA, Chicago, Ill., assignor to the Gates Iron Works, same place. Filed Dec. 16, 1897. Serial No. 662,204. (No model.)



Claim.—1. In a self-lubricating engine, the combination of a frame portion having a settling chamber or reservoir, pipes connecting the upper portion of the settling-chamber with bearings to be lubricated, and return-channels leading from the lubricated bearings to a basin underneath the crank-disk, substantially as described.

2. In a self-lubricating engine, the combination of a frame portion having a settling-chamber extending to the front, underneath and rear of the crank-shaft and above the bearing portion to be lubricated, pipes connecting the upper portion of the settling-chamber with the bearings to be lubricated, and return-channels leading from the lubricated bearings to a basin underneath the crank-disk, substantially as described.

3. In a self-lubricating engine, the combination of a frame portion having a settling chamber or reservoir divided longitudinally and extending to the front, rear and underneath the crank-shaft and to a point above the bearings to be lubricated, pipes connecting the upper portion of the settling-chamber with the bearings to be lubricated, and return-channels leading from the lubricated bearings to a basin underneath the crank-disk, substantially as described.

606,544. TURN-TABLE FOR RAILWAYS. JOHN H. HARTING, Indianapolis, Ind. Filed Aug. 18, 1897. Serial No. 648,633. (No model.)

Claim.—1. An electropneumatic turn-table comprising the table suitably mounted, the arch thereon, a swivel-joint mounted upon the arch by which fluid under pressure may be conducted through pipes from a supply plant to all parts of said table while in motion or while at any point of its revolution about its center and by which an electrical circuit may be likewise conducted from any exterior point to any point upon the table while in motion, a motor on said table adapted to be operated by fluid-pressure and controlled by electric current acting upon a suitable electric motor and controlling-valve, a latch to secure said table in a fixed position and means by which it may be controlled automatically, and a suitable fluid-pressure engine by means of which said table may be rotated, substantially as described for the purposes set forth.

2. The combination of the table, a main motor thereon adapted to use fluid-pressure and to transmit power whereby said table may be rotated, an arch on said table having a central point elevated above the center of said table under which a locomotive may pass, a swivel-joint having substantially an upper part immovably fixed and a lower part fixed to said arch and adapted to rotate with relation to said upper part, said swivel-joint being adapted to convey fluid under pressure by means of suitable pipes from a fixed point exterior to said table to various parts of said table while in motion radially, and also to form a continuous electrical circuit by means of suitable wires between a fixed exterior point, to the moving parts of said table, a valve adapted to control the supply and exhaust of fluid to and from said motor, an electrical motor adapted to control said valve, wires leading from a battery to said electrical motor through said swivel-joint, a circuit closer connected to said wires, a circuit-reverser connected to said wires, pipe to convey fluid to said main motor, and means by which power may be transmitted from said main motor to actuate said table, substantially as shown and described.

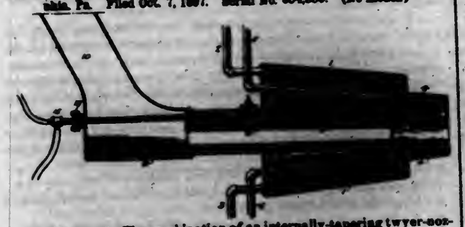
3. In a railway turn-table, the combination of the arch situated centrally upon the table, a swivel-joint upon said arch and adapted to form fluid-ducts therethrough from fixed pipes to pipes movable upon the table, a fluid-pressure motor and means for transmitting power to operate said table, pipes leading from an exterior point to said swivel-joint, electric wires leading from an exterior battery to said swivel-joint, a valve to control the flow of fluids to and from said motor, pipes leading from said valve to said motor, pipes communicating between said swivel joint and said valve, an electrical motor adapted to operate said valve, said electrical motor being reversible and having its central shaft connected by means of suitable gearing to a stem attached to said valve, wires communicating between said swivel-joint and said electrical motor, the battery, the circuit-closer, the circuit-reverser, a fluid-pressure cylinder, a slidable latch to secure said table by engagement in bulkhead-pockets and having its rear portion adapted to form a piston-rod and entering said fluid-pressure cylinder, a packed piston on said piston-rod working in said cylinder, packing at the head of said cylinder around said rod, means for normally forcing said latch into bulkhead-pockets, a latch-valve adapted to be automatically operated by fluid-pressure to admit fluid to said latch cylinder to withdraw the said latch from engagement automatically in advance of the movement of said table, pipes communicating between the port-pipes of said motor and said latch-valve and between said latch-valve and said latch-cylinder, and means by which fluid may be automatically exhausted from said latch-cylinder, substantially as shown and described.

4. The combination of the turn-table, the motor comprising a cylinder having an inlet-port at each end, the piston terminating in a rack-bar suitably supported, gearing adapted to connect with said rack-bar and transmit power to actuate said table, the circular rack secured to the pit-bottom and in engagement with said gearings, the central arch upon said table, the electric motor, the main valve controlled by said motor, port-pipes between said valve and said cylinder, the latch-valve in communication with both of said port-pipes and adapted to operate automatically when pressure exists in either port-pipe to admit fluid to a latch-cylinder, a latch normally thrust outward to engage bulkhead-pockets, a latch-cylinder in communication with said latch-valve and adapted to receive fluid under pressure to withdraw said latch, a valve to automatically release the fluid from said latch-cylinder, the swivel-joint on said arch, the pipes and electric wires leading to and therefrom and suitably connected, and a supply-pipe leading to said main valve, substantially as shown and described.

5. In a turn-table, the combination with a suitable central support, of a swivel-joint consisting of the base provided with the packing box, and having the outlets adapted to receive pipe connections, the case secured centrally upon said base and having the central aperture in its top, the ball-race at the top of said case and the balls therein, the tube passing through the top of said case and terminating therein, the packed piston at the lower end of said pipe and provided with the ball-bearing against the top of said case, a collar adjustably secured to said pipe and provided with the ball-bearing against said case, the interior pipe passing through said first-mentioned pipe and terminating in said base, and means by which the upper end of said pipes may be connected to form separate ducts, substantially as described and set forth.

6. In a turn-table, the combination of the arch, the swivel-joint thereon, the fluid-pipes leading to said joint, the electric wires leading to said joint and connected to a battery, the circuit-closer, the circuit-reverser adapted to reverse the circuit over said wires, the electric motor adapted to operate in either direction and having an extended shaft provided with a screw-worm, a worm-wheel suitably supported engaging said worm and having a central opening provided with screw-threads, a main fluid-controlling valve having a stem provided with screw-threads and passing through the center of said worm-wheel, and a motor adapted to actuate said turn-table and in communication with said main valve, substantially as shown and described.

7. In a turn-table, the combination with the bulkhead having suitable pockets, of the latch-bar suitably supported by said turn-table and adapted to engage said pockets and having the extended rear end forming a piston-rod, the cylinder suitably supported on said table at the rear of said latch-bolt and having a packed head through which said piston-rod enters, the piston on said piston-rod within said cylinder, the spring seated between said piston and the opposite end of said cylinder, the pipe connected to said cylinder, the latch-valve connected to said pipe, the supply-pipes connected to said latch-valve and to the main operating-motor, the main valve, with means by which it may be supplied with fluid and controlled, substantially as shown and described.



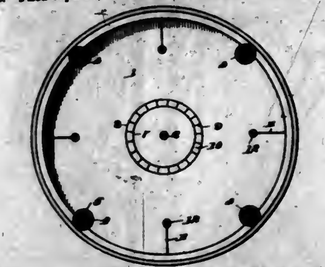
8. In a turn-table, the combination of a motor-cylinder secured to the frame thereof and situated parallel to the main beams between one end and the pivotal center of said table, said cylinder having a port and connecting port-pipe at each end thereof and a piston working in said cylinder, the piston-rod attached to said piston and passing through the packed head of said cylinder toward said pivotal center, the rack-bar attached to the outer end of said piston-rod and suitably supported, the gearing connected to said rack-bar and supported by the opposite end of said table, the circular rack anchored in the pit and engaged by said gearing, the main valve having its chamber connected to said port-pipes, the stem connected to said main valve, the electrical motor connected operatively to said stem, the swivel-joint providing conductors for fluid and electricity, and the connecting pipes and wires, substantially as shown and described.

9. The combination with the main motor and gearing, of the port-pipes, the main valve, the electric motor, the swivel-joint and supply pipes and wires connected therewith, the latch-valve in communication with said port-pipes and adapted to operate automatically as described, the latch-cylinder in communication with said latch-valve, and the latch connected to said latch-cylinder, substantially as shown and described.

10. In a turn-table, the combination of a main motor or engine, the port-pipes leading thereto, the main valve connected to said port-pipes, the electric motor adapted to operate said main valve, the arch, the swivel-joint thereon provided with fluid-ducts therethrough and having contact rings and brushes adapted to convey an electrical circuit continuously while said swivel-joint is in operation, the wires connected therewith, and the fluid-pipes adapted to supply fluid under pressure through said swivel-joint to said main valve, substantially as shown and described.

11. In a turn-table, the combination with a motor mounted thereon, and having two supply-pipes connected at opposite ends thereof, of the latch-valve comprising a cylinder having a pipe connecting one end thereof with one of said supply-pipes and a pipe connecting the opposite end thereof with the other of said supply-pipes, valve-seats at said end connections, a valve seated on each of said seats and opening inwardly, a piston connected to each of said valves, a spring interposed between said pistons, ports adapted to be closed or opened by said pistons, said ports being connected and having a communicating pipe, and the latch having the connected cylinder in connection with said communicating pipe, and means by which said supply-pipes may be charged with fluid and the same released, substantially as shown and described.

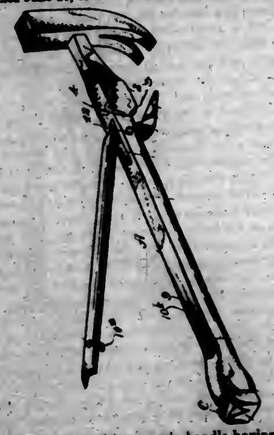
606,545. FURNACE-TWYER. SAMUEL S. HARTRANFT, Philadelphia, Pa. Filed Oct. 7, 1897. Serial No. 654,350. (No model.)



Claim.—1. The combination of an internally-tapering twyer-nozzle and a cylindrical supply-pipe therefor, with a block adapted to reduce the discharge area of the nozzle, a stem carrying said block and located in the upper portion of the supply-pipe, so as to be longitudinally in line therewith, said stem projecting outwardly beyond the supply-pipe, and provision in said supply-pipe serving to support said stem while permitting free longitudinal movement of the same, the stem being of such resiliency as to permit the block to follow the internal bevel of the nozzle, as it is moved back and forth, substantially as specified.

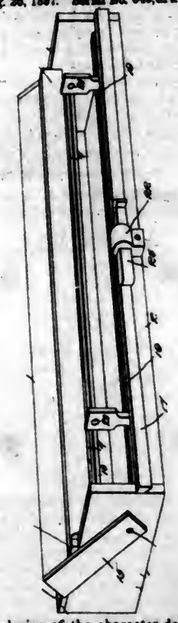
2. The combination of a twyer-nozzle and a supply-pipe therefor, with a block adapted to reduce the discharge area of the nozzle, a stem carrying said block and located in the upper portion of the supply-pipe and projecting outwardly beyond the same, a hooked bolt supporting said stem and passing through the pipe, a tubular lug on the outside of the pipe, and a nut or other fastening for the bolt supported by said lug, the stem being of such resiliency as to permit the block to follow the internal bevel of the nozzle as it is moved back and forth, substantially as specified.

3. The combination of the twyer-nozzle with the hollow segmental reducing-block, and its central hollow stem, said block being as to its central portion, of a thickness equal to or exceeding the diameter of the stem, but as to each side portion, tapering to a comparatively sharp rear edge, substantially as specified.



606,546. PARLOR POOL-TABLE. PETER L. HAYES, Springfield, Mo. Filed Sept. 20, 1897. Serial No. 652,355. (No model.)

Claim.—1. A pool-table of the type described, comprising a circular table-body having a cushion-rim around the edge thereof, pockets at diametrically opposite portions of the table adjoining the rim, a series of spaces or divisions arranged in a circle at the center of the table and adapted to receive the buttons or balls initially grouped or bunched therein, and a starting-point at diametrically opposite portions of the table and between the said pockets on which to place the cue-ball or taw, substantially as described.

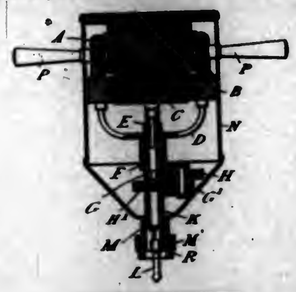


2. A cue for parlor pool-tables, comprising a cylinder, a cue-rod extending therethrough and provided at one end with an elastic tip, a handle at the other end of said rod, a cushion and gage spring between said handle and the adjoining end of the cylinder and another spring inclosed within the cylinder and connected with the cue-rod and adapted, when compressed, to force the tipped end of said rod outward, substantially as and for the purpose described.

606,547. COMBINATION-TOOL. BENJAMIN J. HILLMAN, Victor, Colo. Filed June 29, 1898. Serial No. 697,317. (No model.)

Claim.—A tool, comprising a main handle having a slot therein and an anvil thereon adjacent to said slot, the rear end of said anvil being cut away upon one side forming an inclined cutting blade or knife, and an auxiliary handle pivoted to the main handle and extending through said slot, said auxiliary handle being bent into a jaw adapted to act in connection with the anvil to provide a wire-twister, the bent portion thereof having a cutting edge adapted to fit within the cut-away portion at the rear end of said anvil, as and for the purpose set forth.

606,548. SHADE-TRIMMER. JESSE R. HEFFNER, Hiawatha, Kans. Filed Aug. 26, 1897. Serial No. 649,614. (No model.)



Claim.—1. A device of the character described comprising a suitable frame slotted in the direction of its length, laterally-adjustable knives extending through said slot, a knife-guard pivoted to said frame and adapted to be rocked upon the knives for the purpose set forth, suitably-guided laterally-adjustable brackets perforated for the reception of a rod, said rod being adapted to enter the curtain-roll, means for securing the knives at any desired point throughout the length of the machine, and means for similarly securing the laterally-adjustable brackets, substantially as described.

2. A device of the character described composed of end pieces, a suitable base secured to said end pieces, strips secured to the end pieces above the base and suitably spaced apart to form a longitudinal slot, a depending member secured to the rear strip and provided with a slot and a groove therein, blocks carrying knives extending through the slot, said blocks being provided with lugs or projections extending into said groove, set-screws or their equivalents passing through the slot in the depending member and into the knife-carrying blocks, whereby said blocks are held in adjusted position, a knife-guard pivoted to the frame and adapted to be rocked upon the knives, laterally-adjustable brackets suitably guided at one side of the machine, a rod extending between said brackets, and means for adjustably securing said brackets, substantially as described.

3. The herein-described device comprising a suitable base and suitable end pieces secured to said base, strips secured to the end pieces and suitably spaced apart to form a slot, the member depending from one of the strips adjacent to the slot, said member being provided with a longitudinal slot and a groove, laterally-adjustable knife-carrying blocks having knives extending through the slot in the top strip, said blocks being provided with set-screws or their equivalents passing through the slot in the depending member and lugs or projections extending into the groove in said member, a knife-guard pivoted to the end pieces and adapted to be rocked upon the knives, parallel strips at the front edge of the machine, brackets maintained and guided between said strips, said brackets being perforated for the reception of the rod, a keeper secured to the front edge of the machine and having the wedge therein adapted to be operated to move the outer strip against the bracket to maintain the same in adjusted position or permit it to be moved, substantially as described.

606,549. PORTABLE ELECTRIC DRILL. ERNEST HOLMES, London, England, assignor to Siemens Brothers & Co., Limited, same place. Filed Nov. 13, 1897. Serial No. 658,986. (No model.) Patented in England June 26, 1896, No. 14,157.

Claim.—In a portable electric drill, the combination with a magnet-core and magnet, of two crescent-shaped pole-pieces B secured to the under side of the core, a yoke-frame D secured to and depending from the said pole-pieces and terminating in a central spindle-bearing, an armature-spindle E journaled in said bearing, an armature C fixed to the upper end of said spindle and arranged to rotate between the pole-pieces, an under frame F mounted below the said yoke-frame and forming a drill-spindle bearing, a drill-spindle K journaled in said bearing and provided with a gear-wheel H', a pinion G fixed to the armature-spindle, a gear-wheel H and a pinion G' journaled one above the other in said under frame, said latter gear-wheel and pinion meshing with the aforesaid wheel and pinion, a sleeve screwed upon the lower end of the said under frame, a drill fixed to said spindle, an elastic washer fixed in said sleeve and having its lower edge exposed below the same, handles secured to the magnet-core, and a casing surrounding the operating mechanism of the drill and having its lower portion tapered toward and secured to the under frame.

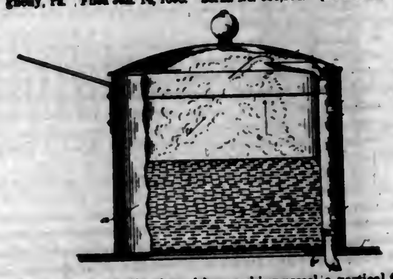
606,550. LATCH AND LOCK COMBINED. GRAHAM HOLDEN, Blue Springs, Mo. Filed July 27, 1897. Serial No. 646,009. (No model.)

Claim.—1. The combination with a reciprocating latch, its protracting-spring, and means for retracting said latch, of the endwise-movable block or bolt adapted to be moved into the path of the latch behind the inner end of the same to secure it against reciprocation, spring-pressed tumblers carried by seated in and pivoted within parallel recesses or grooves in said block or bolt and having means whereby they are adapted to engage with a stationary part of the lock in both positions of said block or bolt, and a suitable key adapted to said grooves or recesses and to engage with said tumblers to retract them from engagement with said stationary part, and also to effect an endwise movement of the said block or bolt, substantially as specified.

2. The combination with the case, the reciprocating latch, its protracting-spring and retracting device, of an endwise-movable block or bolt adapted to be moved into position to lock said bolt against retraction, said block or bolt having parallel wards and a V-shaped notch or recess cutting through the said wards, the pivoted spring-pressed tumblers seated between the said wards and having each a tooth or projection at its free end portion, said tumblers also having depressions therein formed with inclined lateral walls and straight bottom walls, a stationary ward-plate having recesses therein to receive the teeth or projections of the said tumblers in both positions of the sliding block or bolt, and a suitable key adapted to said wards and tumblers, substantially as specified.

3. The combination with the reciprocating latch, of the slidable block or bolt arranged to be moved behind said latch to lock it against retraction, said block or bolt having parallel wards in one face or edge and a V-shaped notch or recess cutting through the said wards, pivoted spring-pressed tumblers seated between the said wards and having each a tooth or projection at its free end portion, a stationary ward-plate having recesses adapted to receive the teeth or projections of the said tumblers and also a semicircular recess whose wall is formed with a series of wards which are respectively in the planes of the corresponding wards of the said block or bolt, and a suitable key adapted to said wards and tumblers, the latter having intermediate beat or depressed portions upon which the key is adapted to act, substantially as specified.

606,551. RUBBER ATTACHMENT FOR PENCILS. WILLIAM P. HUFFMAN, Hickory, N. C. Filed Aug. 31, 1897. Serial No. 650,179. (No model.)

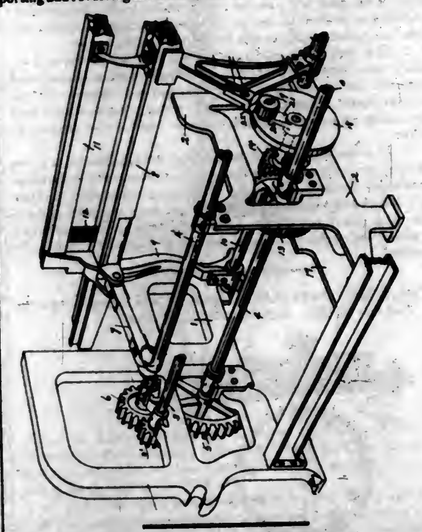


Claim.—1. The combination with a pencil, of a sleeve fitting on the front end of the pencil in rear of the point thereof and adapted to be arranged at any point on the pencil intermediate of the ends of the same, an eraser extending outward at an angle to the sleeve, whereby it may be brought into and out of position for use by simply rotating the pencil, and means connected with the sleeve for frictionally engaging the pencil, whereby the device is secured to the latter, substantially as described.

2. The combination with a pencil, of an eraser-holder provided with a short longitudinal sleeve fitting on the front end of the pencil in rear of the point and adapted to be arranged in any position between the ends of the pencil and having a tubular arm extending toward the point of the pencil, located a short distance therefrom and forming a socket for a piece of rubber or similar material, whereby the eraser may be brought in position for use by simply rotating the pencil, and an inner sleeve clamping the pencil and engaged by the longitudinal sleeve, substantially as described.

3. The combination with a pencil, of a short inner tapering sleeve split longitudinally and arranged on the pencil in rear of the point and adapted to be placed in any position between the ends of the pencil, said tapering sleeve being exteriorly threaded, and an eraser-holder having an interiorly-threaded tapering sleeve engaging the inner sleeve, said holder being arranged to support a piece of rubber or other erasing material near the point of the pencil, whereby the device may be brought into position for use by simply rotating the pencil, substantially as described.

606,552. COOKING UTENSIL. ALEXANDER F. HUMPHREY, Allegheny, Pa. Filed Jan. 14, 1898. Serial No. 666,591. (No model.)



Claim.—1. In combination with a cooking vessel, a vertical flue or conductor pipe arranged therein and secured by clamps to the inner wall of the vessel, a pipe engaging in the upper end of said flue or conductor-pipe, said pipe being provided with a funnel or flaring end and an elbow fitting within the flue or condector-pipe at its lower end, and projecting downwardly into the space within the stove, substantially as shown and described.

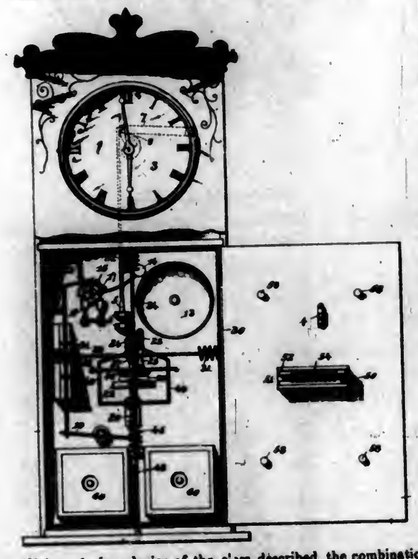
2. In combination with a cooking vessel a vertical flue or conductor-pipe arranged therein and extending upward to a point near the rim of the vessel, said flue being adapted to receive a pipe at its upper end, which is provided with an inwardly-projecting funnel or flaring mouth, said flue or pipe being also adapted to receive an elbow-pipe at its lower end, said elbow projecting downward into the space within the stove, and thereby conducting the fumes from the vessel to the point where they may be engaged by the draft within the stove, substantially as shown and described.

606,553. LOOM. GEORGE F. HUTCHINS, Worcester, Mass., assignor to the Crompton & Knowles Loom Works, same place. Filed Jan. 10, 1898. Serial No. 666,142. (No model.)

Claim.—1. In a loom, the combination with the lay, and means for actuating the same, and a lay-sword intermediate the end lay-swords, having a curved or cam surface thereon, to be engaged by a roll or pin on a crank disk or arm, of said crank disk or arm carrying a roll or pin to engage said curved or cam surface during a portion only of the revolution of said crank, and means for supporting and revolving said crank, substantially as shown and described.

2. In a loom, the combination with the lay, and means for actuating the same, and a lay-sword intermediate the end lay-swords, having an adjustable curved or cam surface thereon, to be engaged by a roll or pin on a crank disk or arm, of said crank disk or arm carrying a roll or pin to engage said curved or cam surface during a portion only of the revolution of said crank, and means for supporting and revolving said crank, substantially as shown and described

606,554. VENTILATING VAULT-COVER. JACOB JACOBS, Brooklyn, N. Y. Filed Dec. 31, 1897. Serial No. 664,931. (No model.)



Claim.—1. In a ventilating and lighting cover, the combination of a frame formed of a ring and a series of radially-arranged bars that extend inward therefrom, between only some of which glasses are placed, no glasses being placed between the others, and inwardly-inclined plates being between the outer ends of bars between which are no glasses, and a pivoted frame over the other, having glasses adapted to be moved over and from the openings in the frame beneath, substantially as and for the purpose described.

2. In a ventilating and lighting cover, the combination of a stationary frame having a series of radially-arranged bars, between only some of which glasses are placed, said bars being extended above the surface of the glass, and a second similar frame, having bars extended downward in position to engage the upward extensions of the other frame-bars, substantially as and for the purpose described.

3. In a ventilating and lighting cover, the combination of a stationary frame having segment-shaped openings, alternate ones of which are glazed, and a pivoted frame having segment-shaped openings, alternate ones of which are glazed, and having along an edge of each glass a channel or gutter, substantially as and for the purpose described.

4. In a ventilating and lighting cover, the combination of a ring having an inwardly-projecting flange and a curb rising from the latter, a stationary frame consisting of a ring resting on said curb, and having a downwardly-extending flange surrounding the curb, and provided with glazed and unglazed openings, and a pivoted frame having glazed and unglazed openings, substantially as and for the purpose described.

606,555. SAFE-ALARM. JOSEPH F. JOHNS, Yellow Springs, Ohio. Filed Feb. 27, 1897. Serial No. 625,375. (No model.)

Claim.—1. In a device of the class described, the combination of a casing having a door, a lock provided with a bolt, a rotary cam connected with the clock mechanism, and a lever connected with the bolt and resting upon and raised by the cam and adapted to fall and actuate the bolt when released by the said cam, substantially as described.

2. In a device of the class described, the combination of a casing having a door, a hasp carried by the door, a vertically-movable bolt mounted on the casing and arranged to engage the hasp when the door is closed, and a rotary cam connected with and operated by the clock mechanism and supporting the bolt, said cam being provided at one side with a straight edge and having a curved edge extending from the inner end of the straight edge around the other side of the cam to the outer end of the straight edge, substantially as described.

3. In a device of the class described, the combination of a spring-actuated alarm having an escapement, means for holding the latter normally out of operation, a plunger connected with such means and provided with a depressible plate and adapted to actuate the said means for releasing the alarm, levers engaging the depressible plate, and means for operating the levers to depress the plate, substantially as described.

4. In a device of the class described, the combination of a casing, an alarm mechanism, a reciprocating locking-rod holding the alarm mechanism normally out of operation, a lever connected with the locking-rod, a plunger connected with the lever, and means for reciprocating the plunger to actuate the locking-rod and lift the same out of engagement with the alarm mechanism, substantially as described.

5. In a device of the class described, the combination of a casing, an alarm mechanism, means for holding the alarm mechanism normally out of operation, a spring-actuated rod arranged to engage the support upon which the safe is mounted, and connections between the rod and the means for holding the alarm mechanism out of operation, whereby the alarm mechanism will be thrown into operation when the casing is moved, substantially as described.

6. In a device of the class described, the combination of a casing, an alarm, a locking device holding the alarm normally out of operation, a reciprocating plunger connected with and adapted to release the locking device, a spring-actuated lever engaging the plunger, and an arm or rod connected with the lever and adapted to hold the same out of engagement with the plunger when the casing is in position on its support, substantially as and for the purpose described.

7. In a device of the class described, the combination of a casing, an alarm mechanism, a locking device holding the alarm mechanism normally out of operation, a spring-actuated rod connected with the locking device and adapted to disengage the same from the alarm mechanism, said rod having its outer end arranged at an opening of the casing, and a plug projecting into the said opening engaging the rod and adapted to maintain the spring in its depressed position when the casing is in its normal position, substantially as described.

8. In a device of the class described, the combination of a casing, an alarm mechanism, a locking device maintaining the alarm mechanism normally out of operation, a yieldingly-mounted lining arranged within the casing, and connections between the lining and the locking device, whereby the latter will be thrown out of engagement with the alarm mechanism should an attempt be made to perforate the casing, substantially as described.

9. In a device of the class described, the combination of a casing, an alarm mechanism, a locking device holding the alarm mechanism normally out of operation, a lining arranged within the casing, rods connected with the lining, springs secured to the casing and to the rods and yieldingly supporting the lining, and connections between the rods and the locking device whereby the latter is thrown out of engagement with the alarm mechanism when the lining is moved, substantially as described.

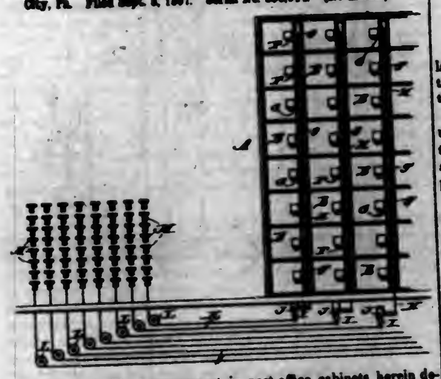
10. In a device of the class described, the combination of a casing, an alarm mechanism mounted in the casing, a locking device holding the alarm mechanism normally out of operation, a movable lining arranged in the casing, a plunger provided with a depressible plate and connected with the locking mechanism, rods carried by the lining, and a lever fulcrumed on a suitable support connected with the rods and arranged to engage the depressible plate, substantially as described.

11. In a device of the class described, the combination of a casing, an alarm mechanism, a locking device holding the alarm mechanism normally out of operation, a depressible plate connected with the locking mechanism, a T-shaped lever fulcrumed on a suitable support and having its arms engaging the depressible plate, whereby the latter is operated when the lever is swung in either direction or is forced downward, a movable lining, rods connected with the lining, and a yoke mounted on the rods and receiving the upper end of the lever, substantially as described.

12. In a device of the class described, the combination of a casing, an alarm mechanism, a locking device for holding the alarm mechanism out of operation, a depressible plate connected with the locking device, a lever arranged to engage the depressible plate, and a lock mounted on the door of the casing and connected with the lever, substantially as described.

13. In a device of the class described, the combination of a casing, an alarm mechanism, a locking device for holding the alarm mechanism normally out of operation, a loop connected with and adapted to disengage the locking device from the alarm mechanism when it is drawn outward, and a combination-lock provided with reciprocating bolts engaging the loops, substantially as described.

14. In a device of the class described, the combination of a casing, an alarm mechanism, a locking device for holding the alarm mechanism out of operation, a depressible plate connected with the locking mechanism, an oscillating frame provided with a loop, a lever connected with the frame and arranged to engage the depressible plate, and a lock engaging the loop, substantially as described.



15. In a device of the class described, the combination with a casing, of a pair of reversely-reciprocating bolts mounted in the casing and extending from both sides thereof when in their locked position, said bolts being provided between their ends with teeth, a pinion interposed between the reciprocating bolts, meshing with the teeth thereof and capable of rotation in either direction to reciprocate the bolts to a locked position, a knob, and means for connecting the knob with the pinion, said means frictionally engaging one of said parts, whereby the knob is adapted to rotate the pinion sufficiently to lock the bolts and is capable of further rotation independently of the pinion, substantially as described.

16. In a device of the class described, the combination with a pair of reciprocating bolts provided with teeth, a pinion interposed between and meshing with the teeth of the bolts, a knob or stem connected with the pinion for rotating the same, and provided with a suitable index or pointer, and a stationary dial, substantially as described.

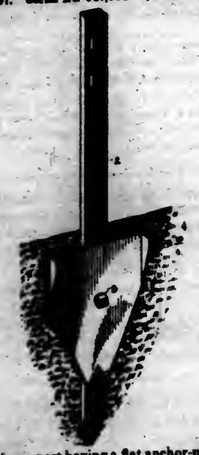
17. In a device of the class described, the combination of a casing provided with a door, an alarm mechanism mounted in the casing, a locking device for holding the alarm mechanism normally out of operation, a movable lining mounted on the inner face of the door, a plunger having a depressible plate and connected with the locking device, a lever fulcrumed on a suitable support and provided with arms extending in opposite directions and engaging the depressible plate, and connections between the door and the lever whereby the alarm mechanism will be thrown into operation when the door is drawn outward or the lining is forced inward, substantially as described.

18. In a device of the class described, the combination of a pair of reciprocating bolts provided with teeth, a pinion interposed between the bolts and meshing with the teeth thereof, the knob having a spindle loosely receiving the pinion, and a spring mounted on the spindle and engaging the pinion frictionally, substantially as described.

606,556. POST-OFFICE-BOX CABINET. JACOB C. KEITH, Elwood City, Pa. Filed Sept. 8, 1897. Serial No. 650,914. (No model.)

Claim.—1. The improvement in post-office cabinets herein described comprising the post-office-box doors, lock-bolts therefor, means by which the holders of the boxes may release the bolts, catches or seats for engagement by the bolts, a keyboard and means operated therefrom under the control of the officia) for freeing the catch and bolt from engagement, substantially as described.

2. The combination of the post-office-box door, the lock thereon having a bolt, a catch for engagement by said bolt, a keyboard, a bell-crank lever, connections between said lever and the catch, connections between the lever and the keyboard and guides for the latter connections, substantially as described.

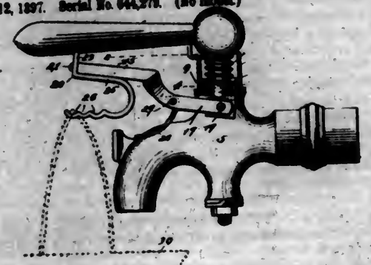


606,557. FLEXIBLE METALLIC SHEATHING FOR TUBES AND HOSES. ROBERT KNAB and MORRIS ROSENBAUM, Philadelphia, Pa. Filed Nov. 22, 1897. Serial No. 659,499. (No model.) Patented in Austria Mar. 26, 1897, No. 47/1,543; in Belgium Apr. 1, 1897, No. 127,230; in France May 28, 1897, No. 267,417, and in Canada Aug. 14, 1897, No. 57,945.

Claim.—1. The combination of a flexible article, such as a hose, rope, &c.; a sheathing composed of a series of flat wires braided or interlaced, said sheathing being secured to the finished flexible article at separated points of attachment, and being free to expand and contract between said points of attachment when the flexible article is bent, substantially as described.

2. The combination of a finished tube, a sheathing made of a series of flat wires braided into the form of a tube, said sheathing being slipped over the finished tube so as to snugly fit thereon, with means for securing the wires forming the sheathing to the tube at separated points of attachment so that the wires will have free movement between the points of attachment when the tube is bent, substantially as described.

606,558. FENCE-POST. LOUIS H. KETCHUM, Jerseyville, Ill. Filed Aug. 13, 1897. Serial No. 647,984. (No model.)



Claim.—1. A fence-post having a flat anchor-plate provided with lateral perpendicularly-disposed ears and an intermediate inclined retaining-spur, and means for detachably securing the anchor-plate to the post, substantially as specified.

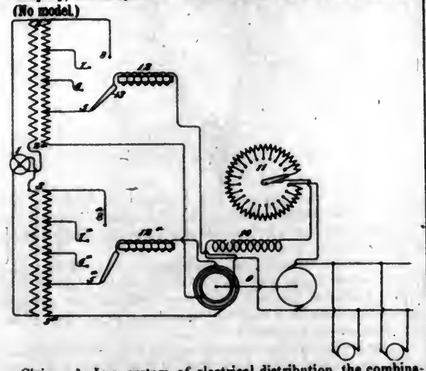
2. An anchor for fence-posts consisting of a plate having lateral upstruck ears arranged approximately perpendicular to the plane of the body portion of the plate, and a lower upstruck spur arranged at an upward inclination from the plane of the body portion of the plate, substantially as specified.

3. An anchor-plate for fence-posts struck from a triangular blank and having upturned lateral angles forming bearing-ears, and an upturned terminal spur arranged at an upward inclination from the plane of the body portion of the plate, substantially as specified.

4. The herein-described fence-post provided at an intermediate point with a bolt-opening, a triangular anchor-plate arranged in contact with the post and having an alined bolt-opening, said plate being of triangular construction and having its angles upturned to form lateral bearing-ears and a lower retaining-spur, and a bolt engaging said openings to secure the anchor-plate to the post, substantially as specified.

606,559. AUTOMATIC GAGING-FAUCET. HENRY R. KNOTTERUS, St. Louis, Mo., assignor to H. C. Hess, same place. Filed July 12, 1897. Serial No. 644,279. (No model.)

Claim.—1. In a faucet, a spring-actuated valve-stem, a handle attached to said valve-stem for operating the same, a lever pivotally attached to the faucet and engaging said handle, a spring attached to said lever and engaging the faucet and a hook upon said lever, substantially as specified.



2. In combination with a faucet having a spring-actuated valve-stem, a handle secured to the upper end of the valve-stem for operating the same, a lever pivotally attached to the faucet, a spring secured to said lever and engaging the faucet as required to hold the free end of the lever yieldingly in engagement with the handle, and a hook attached to the outer end of the lever, the upper end of which hook is constructed to engage the faucet-handle, substantially as specified.

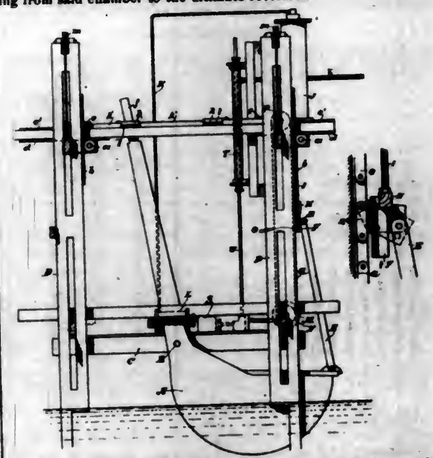
3. In combination with a faucet having a spring-actuated valve-stem, an operating-handle attached to the upper end of said valve-

stem, a spring-actuated lever pivoted to the faucet, a hook fixed to the end of the lever, in the upturned end of which is formed a recess for receiving the faucet-handle, and an ear formed integral with the side of the hook.

4. A faucet constructed with a spring-actuated valve-stem, a handle secured to the upper end of said valve-stem, a pin projecting downwardly from said handle, a lever pivoted to the faucet, in the outer top end of which is formed a series of notches, and said lever being provided with a recess to receive the lower end of the pin and a spring secured to the faucet and normally elevating the outer end of the lever, substantially as specified.

606,560. REGULATION OF ROTARY-TRANSFORMER DIRECT-CURRENT ELECTROMOTIVE FORCE. BENJAMIN G. LAMME, Pittsburg, Pa., assignor to the Westinghouse Electric and Manufacturing Company, of Pennsylvania. Filed Feb. 10, 1898. Serial No. 669,847. (No model.)

Claim.—1. In a system of electrical distribution, the combination with a stationary transformer having means for varying the electromotive force supplied by its secondary, of a rotary transformer receiving current from said transformer secondary, one or more choke-coils, means for connecting the same in said secondary circuit and means for varying the field-magnet excitation of the rotary transformer, whereby a wide variation of potential at the direct-current terminals may be secured.



2. In a system of electrical distribution, the combination with a stationary transformer having means for varying the electromotive force supplied by its secondary, of a rotary transformer receiving current from said transformer secondary, one or more direct-current motors receiving current from said rotary transformer, one or more choke-coils, means for including the same in the alternating-current circuit and means for varying the field-magnet excitation of the rotary transformer whereby the speed of the direct-current motor or motors may be varied within wide limits.

3 In a system of electrical distribution, the combination with a stationary transformer provided with means for varying the active length of its secondary winding, of a rotary transformer, one or more direct-current motors, a choke-coil arranged to be connected with any active length of the stationary transformer secondary and means for varying the excitation of the rotary-transformer field-magnet, substantially as and for the purpose set forth.

606,561. AIR-COMPRESSING WAVE-MOTOR. JOHN H. LEONARD, Leonard Station, Cal. Filed June 18, 1897. Serial No. 641,246. (No model.)

Claim.—1. In a wave-motor, a float hinged or journaled at one end to a vertically-adjustable framework and having the other end free to move up and down by the action of the tide, air-compressing cylinders situated in line above the movable end of the float, guides and slides with which the piston-rods are connected and a pitman connecting the slide directly with the float, other compressing-cylinders situated upon the movable frame, having pistons, slides and connecting-rods uniting the cylinder-pistons with crank-wheels journaled upon the movable frame, sprocket-wheels, a chain passing between said sprocket-wheel and the corresponding one situated in line above, so that the chain travels between the guides of the cross-head of the first-named cylinders, a pawl actuated by the movement of said cross-head and pitman so as to engage the chain and advance it at each reciprocation whereby the crank-wheels are rotated intermittently and the pistons move within the cylinders, and pipes connecting the preliminary compression-cylinders with the supplemental ones whereby they operate in unison.

2. In a wave-motor, a float hinged at one end to a frame vertically adjustable in a permanently-fixed framework, said float having its outer end movable about its hinge or journal-point, cylinders situated respectively above the movable end of the float and horizontally upon the movable framework, a cross-head and slide connecting the piston-rods of the first-named cylinders, and a pitman to the movable end of the float, a chain passing around sprocket-wheels, one of which is fixed upon the crank-shaft through which motion is imparted to the pistons of the second supplemental cylinders, a pawl movable by the reciprocation of the pitman, and the end of the float adapted to engage the sprocket-chain and advance it intermittently whereby pistons of both cylinders are actuated, pipes connecting the vertical and the horizontal cylinders whereby the air compressed in the first cylinders is delivered to be further compressed by the second cylinders, a receiver into which the air from said cylinders is delivered, a vertically-disposed chamber fixed upon the permanent frame and a pipe slidable through stuffing-boxes at opposite ends of said chamber, said pipe having openings made through its sides within the chamber and connected with the compression-cylinders so that the air is delivered from said cylinders into a chamber, and a fixed conveying-pipe leading from said chamber to the ultimate receivers.

3. In a wave-motor, a fixed framework, a vertically-movable framework guided and slidable therein, with a float fulcrumed to it at one end having the other end free to rise and fall by the action of the waves, lever-arms extending upwardly from opposite sides of the float, shafts journaled across the ends of the movable frame having pinions which engage with vertically-disposed rack-bars upon the fixed frame, pinions fixed upon said shafts and engaged by rack-bars slidable upon the movable frame, slides movable in guides parallel with the rack-bars having locking-pawls which engage teeth upon the upper sides of the rack-bars, said slides standing in line with the levers projecting upwardly from the float so that said levers will contact with the slides at one end or the other whenever the rise or fall in the tide correspondingly raises or depresses the float about its fulcrum-point, and mechanism whereby the movement of said slides acts through the rack-bars to rotate the shafts and raise or depress the movable frame in unison with the rise or fall of the tide.

4. In a wave-motor, a float having one end hinged to a vertically-movable frame and levers extending upwardly from the fulcrumed or hinged end of the float, slides lying in the path of the oscillation of said levers, rack-bars extending parallel with the line of movement of said slides, pawls fixed to the slides and adapted to engage the upper surfaces of the rack-bars whereby the latter are retained in position until the oscillating arms strike those at either one end or the other of its oscillation, inclined surfaces upon the slides whereby when such contact of the oscillating levers takes place the latching-pawls will be disengaged from the rack-bars and other pawls engaged therewith so as to move the rack-bars, teeth upon the lower sides of the rack-bars engaging pinions upon shafts journaled across opposite ends of the movable frame, other pinions upon said shafts engaging vertical racks upon the fixed frame whereby the movements of the slides and rack-bars act to rotate the shaft and pinions so as to raise or depress the movable frame automatically and in unison with the rise and fall of the tide.

5. In a wave-motor, a float hinged or fulcrumed at one end to a vertically-movable frame, with the other end free to rise and fall, lever arms extending upwardly from the hinged end of said float and

movable with the oscillations of the float about its fulcrum-point, rack-bars connected through pinions upon shafts journaled across the ends of the movable frame, with vertically-disposed rack-bars upon a stationary frame within which the first-named frame may be raised or depressed, rack-teeth upon the top of said bars, slidable bars parallel with the rack-bars having spring-pressed pawls by which the slides are normally engaged with the rack-bars, said slides having their adjacent ends in the line of oscillation of the float-carried levers, whereby the rise or fall of the tide will cause the levers to contact with the slides at either one end or the other of their stroke, inclines upon said slides which are moved beneath the holding-pawls to disengage them when the slides are first struck by the levers, other pawls carried by the slides and adapted to engage and move the rack-bars after the disengagement of the holding-pawls whereby the rack-bars are caused to operate the pinions and raise or depress the movable frame in unison with the rise or fall of the tide.

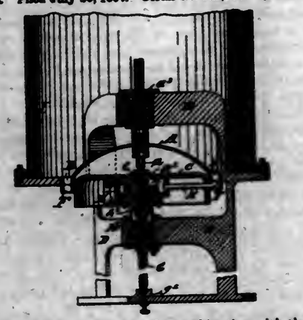
6. In a wave-motor, a float fulcrumed at one end to a vertically-movable frame, a stationary guide-frame, levers projecting upwardly from the hinged or fulcrumed end of the float, slides movable horizontally having their inner ends in the line of travel of the oscillating levers adapted to make contact therewith when the rise or fall of the tide causes the levers to swing a sufficient distance at either end of their travel, slidable rack-bars engaging pinions upon shafts journaled across the opposite ends of the movable frame, other pinions upon the same shaft engaging vertical rack-bars upon the fixed frame, whereby the rotation of said shafts and pinions acts to raise or depress the movable frame with relation to the fixed frame and the surface of the water, holding-pawls fixed upon the slides and engaging teeth upon the upper sides of the rack-bars whereby the latter are prevented from movement while the levers do not contact with the slides, inclined surfaces upon the slides which act to disengage the holding-pawls from the rack-bars when the slides are first moved by contact with the levers, other pawls adapted to engage the teeth of the rack-bar so as to engage it in unison with the movement of the slides, and hinged latches adapted to swing in behind the float-carried levers when the latter have commenced to move the slides, whereby the slides are withdrawn when the return movements of the levers take place.

7. In a wave-motor, a float hinged at one end and having the free end capable of vertical motion by the action of the waves or swell, main pumps having pistons and piston-rods connecting directly with the movable end of the float whereby the pumps are utilized to compress air, supplemental pumps into which the partially-compressed air from the main pumps is delivered wherein the air is further compressed, a cooling-receiver through which the compressed air is passed, a transfer-chamber upon the fixed frame, a pipe passing through stuffing-boxes therein adapted to rise and fall with the movable float-carrying frame, said pipe having openings discharging into the fixed chamber and a pipe discharging from the fixed chamber to supplemental receivers.

8. In a wave-motor, a float hinged at one end to a vertically-movable frame with the other end free to be actuated by the rise and fall of the tide, main air-compressing pumps with pistons and piston-rods connected directly with the movable end of the float, supplemental compressing pumps and pipes whereby the air is led from the main pump thereto and is further compressed, a cooling-chamber through which the air is passed from the supplemental pumps, a pipe leading therefrom and passing through stuffing-boxes at upper and lower ends of a permanently-fixed chamber whereby the pipe connected with the movable float-carrying frame is slidable within the main chamber without severing connection therewith, openings formed in the pipe interior to the chamber whereby the air may pass from the pipe to the chamber, a fixed pipe leading from the chamber to supplemental receivers, said receivers being arranged in series and provided with intermediate balanced pressure-valves.

9. The combination in a wave-motor of a rising-and-falling float with a plurality of air compressing pumps, means for transferring the compressed air therefrom to permanent receivers, balanced valves interposed in the passages between the receivers, springs pressing upon said valves to close them against the passage of air from one receiver to another until the pressure in the first receiver has reached the desired tension, the valves being opened by any surplus pressure so as to equalize the tension between the adjacent receivers.

10. A series of receivers adapted to contain compressed air, passages and valves through which the air is transferred from the first to the last of the series, said valves having a spring-pressure whereby they are kept closed until the tension within the first receiver has reached the required degree, balancing devices into which the air-pressure from the following receiver is admitted so that only the tension of the spring must be overcome in opening the valve for the transmission of air from one receiver to the next following.



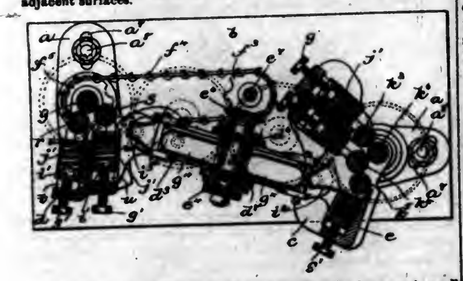
11. The combination of a series of tanks, and means for supplying the first of said tanks with compressed air, and pressure-valves interposed between successive members of the series arranged to be opened when the compressed air on one side of the valves has attained a definite pressure and admit air therethrough, whereby said tanks may be filled in succession by compressed air, substantially as described.

606,562. PUSH-BUTTON. FREDERICK J. LISK, Chelsea, Mass. Filed Nov. 5, 1897. Serial No. 657,494. (No model.)

Claim.—A circuit-closer consisting of an escutcheon provided on its inner face with a chamber *b* and a cross-bar *c*, forming a contact-point, a push-button extending through the escutcheon and having its inner end broadened or formed into a disk, the wire forming the other electrode being coiled around and upon the said disk.

606,568. ROTARY MOTOR. CONRAD F. G. LOHMANN, Northcote, Victoria. Filed July 29, 1897. Serial No. 646,364. (No model.)

Claim.—1. In a rotary motor the combination with the frame of a rotatable disk journaled therein having inclined radial blades around its periphery, a complemental rotatable disk independently journaled in said frame having radial blades around its periphery inclined oppositely to the blades on said first-named disk and having recessed delivery-ports therein, an annular chamber provided on the outer face of said complemental disk having an inlet for the motive fluid, pipes connecting said chamber with the delivery-ports of said radial blades, and a chimney encircling the disks and extending upward therefrom and closed at its lower end to communication with the outer air except through the spaces between the two sets of blades, substantially as described.



2. In a rotary motor, the combination with the frame of two shafts independently mounted therein in line with each other, means for vertically adjusting said shafts, a rotatable disk carried by each shaft having radial inclined blades around its periphery, one of said disks being located beneath the other in operative relation thereto and having its blades oppositely inclined from the blades of the upper disk and provided with recessed delivery-ports, an annular chamber provided on the outer face of the lower disk having an inlet for the motive fluid, pipes connecting said chamber with the delivery-ports of said radial blades, and a chimney encircling the upper disk and extending upward therefrom and closed at its lower end to communication with the outer air except through the spaces between the two sets of blades, substantially as described.

606,564. APPARATUS FOR DRAWING OFF IN CIRCLE-COMBS. ALBERT LOSS and ROBERT FOSTER, Lawrence, Mass. Filed Oct. 8, 1897. Serial No. 654,497. (No model.)

Claim.—1. In a circle-comb, the combination with the toothed circles and means for operating them, of a set of three or more smooth-surfaced drawing-off rolls adapted to engage the wool between their adjacent surfaces, and means for positively and continuously driving said rolls.

2. In a circle-comb, a drawing-off device comprising a smooth-surfaced roll, two other smooth-surfaced rolls coacting with the first roll at separate points to engage the wool, and means for positively and continuously driving said rolls.

3. In a circle-comb, a drawing-off device comprising a driving-shaft carrying a smooth-surfaced roll and a gear, means for continuously rotating said shaft, and two other smooth-surfaced rolls provided with gears on their shafts meshing with the gear on the driving-shaft, the rolls being adapted to engage the wool between their adjacent surfaces.

4. In a circle comb, the combination with the large and small toothed circles and means for operating them, of a series of smooth-surfaced drawing-off rolls adjacent to the large circle and adapted to engage and draw off the wool therefrom between their adjacent surfaces, means for positively and continuously driving said rolls, a series of smooth-surfaced drawing-off rolls adjacent to the small circle and adapted to engage and draw off the wool therefrom between their adjacent surfaces and to combine it with a sliver from the large circle to form a single sliver, means for positively and continuously driving said rolls, and means for guiding the sliver from the drawing-off rolls of the large circle to those of the small circle.

5. In a circle-comb, the combination with the toothed circles and means for operating them, of drawing-off devices adjacent to the respective circles, means for operating said devices, and intermediate means for guiding and advancing a sliver from one set of drawing-off devices to the other, the said means comprising a set of coacting smooth-surfaced rolls adapted to engage the wool between their adjacent surfaces, and means for positively driving said rolls.

6. In a circle-comb, drawing-off devices adjacent to the large and small toothed circles, coacting rolls adapted to guide and advance a sliver from the drawing off devices of one circle to those of the other, and stationary devices for supporting and guiding the sliver between said rolls and the drawing-off devices.

7. In a circular wool-combing machine, the combination with the large and small circles of drawing-off devices adjacent to each circle, and means for conducting a sliver from the drawing-off devices of the large circle to those of the small circle, the said means comprising a set of coacting smooth-surfaced rolls, guiding troughs or conduits on either side of said rolls, and funnel shaped guides at opposite ends of said troughs.

8. In a drawing-off device for a circle-comb, the combination of a drawing-roll and bearings therefor, a frame, a carrier provided with bearings fixed thereto, a roll journaled in said bearings, a connection between the frame and carrier to permit the latter to slide but prevent tilting thereof in the former, and means for sliding the carrier in the frame, whereby the parallel relation of the rolls is not changed as they are moved toward or away from each other.

9. In a circular wool-combing machine, two drawing-heads having smooth-surfaced drawing-off rolls, and an intermediate guiding mechanism comprising a frame adjustably mounted between and carried by said drawing-heads and suitable guiding devices on said frame adapted to guide a sliver from the rolls of one drawing-head to the rolls of the other.

10. In a circle-comb, a drawing-off device comprising a driving-shaft provided with a gear and carrying a smooth-surfaced drawing-roll, a frame or head pivotally embracing said shaft, solid frames or carriers mounted to slide in guides on said head, smooth-surfaced drawing-rolls supported in bearings on said frames and having gears mounted on their shafts and meshing with the gear on the driving-shaft, and springs interposed between the sliding carriers and the heads and operating to yieldingly actuate the carriers and their rolls toward the roll on the driving-shaft.

11. In a circle-comb, two drawing-heads provided with drawing-rolls and shafts for driving said rolls, intermediate rolls supported between said heads for guiding and advancing a sliver from one head to the other, and a sprocket-and-chain device connected with one of the driving-shafts and with said intermediate rolls, for driving the latter.

12. In a circular wool-combing machine, in combination, two independent linearly and pivotally adjustable drawing-heads having drawing-off rolls, vertical shafts for driving said rolls, an intermediate frame adjustably supported on said drawing-heads, conducting-rolls mounted on said frame for conducting a sliver from one drawing-head to the other, a sprocket-and-chain device for driving said conducting-rolls from one of the vertical shafts, a roller carried by the frame and an adjustable cam-plate cooperating with said roller to adjust said sprocket-and-chain device.

13. In a drawing-off device for a circle-comb, the combination of a drawing-roll, and bearings therefor, a frame, a carrier provided with bearings fixed thereto, a roll journaled in said bearings, a connection between the frame and carrier to permit the carrier to slide but prevent tilting thereof in the frame, and a yielding adjusting means for sliding the carrier in the frame.

14. In a drawing-off device for a circle-comb, the combination of a drawing-roll and bearings therefor, a frame, a carrier provided with bearings fixed thereto and mounted in said frame, a roll journaled in the said bearings on the carrier, a guiding connection between the frame and carrier to permit the latter to slide but prevent tilting thereof in the former, and a single set-screw for sliding the carrier in the frame.

15. The combination of the drawing-heads and drawing-off rolls, of a frame supported between said heads, conducting-rolls mounted on said frame, and means for driving the conducting-rolls from the drawing-rolls.

16. In a circle-comb, the combination of the drawing-heads and drawing-rolls, of a frame adjustably mounted between said heads, conducting-rolls mounted on said frame, and means for driving the conducting-rolls from the drawing-rolls including a sprocket-and-chain connection and means for adjusting the frame between the drawing-heads.

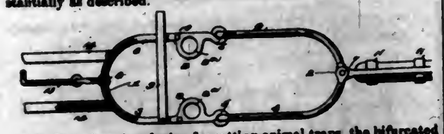
17. In a circle-comb, the combination of the drawing-heads and sets of drawing-rolls, of a frame, supports between said heads, conducting-rolls carried by said frame, and means including a sprocket-and-chain connection for driving the conducting-rolls from the drawing-rolls, a roller on the frame and a cam-plate adjustably mounted on one of the drawing-heads whereby to adjust the frame toward and away from one set of drawing-rolls and thereby adjust the sprocket-and-chain connection.

18. In a circle-comb, the combination of the drawing-heads and sets of drawing-rolls, of a stationary guide for supporting the sliver between the sets of drawing-rolls.

19. In a circle-comb, the combination of the drawing-heads and sets of rolls, of a stationary guide for supporting the sliver between the sets of drawing-rolls, and means at the end of the stationary guide for leading the sliver from the drawing-rolls to said guide.

20. In a circle-comb, the combination of the drawing-heads and sets of drawing-rolls, of a stationary guide for supporting the sliver between the sets of drawing-rolls, and trumpets pivotally mounted at the ends of the guide for leading the sliver from the first set of drawing-rolls to the guide and from the guide to the second set of drawing-rolls.

606,565. PESSARY. ANNA M. LOCKWOOD-POTTS, London, England, assignor of one-half to George Edward Harrison, same place. Filed Dec. 2, 1897. Serial No. 660,908. (No model.) Patented in England Nov. 12, 1896, No. 25,473.



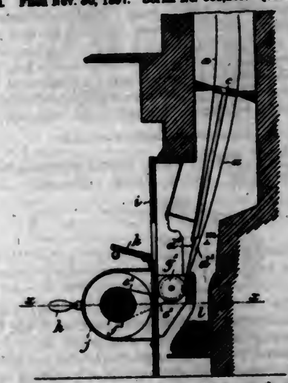
Claim.—1. In a pessary, the combination with the neck of the cup having its end screw-threaded and provided with a bore angular in cross-section, of a stem having its inner end of a shape corresponding to that of the bore of the neck, a spring in the bore of the neck and having one end secured to the stem, and a screw-cap on the end of the neck and through which the stem loosely slides, substantially as described.

2. In a pessary, the combination with the neck of the cup having its end screw-threaded and provided with a bore square in cross-section, of a stem having a square head fitting in the bore of the neck and provided with a reduced extension beyond the head, a spring in the bore of the neck and having one end secured to the extension of the stem, and a screw-cap on the end of the neck and through which the stem loosely slides, substantially as herein shown and described.

606,566. DEVICE FOR SETTING ANIMAL-TRAPS. DAVE LUTZ, Cleveland, Miss. Filed Aug. 11, 1897. Serial No. 647,261. (No model.)

Claim.—1. In a device or clamp for setting animal-traps, the pivotally-connected clamping-arms arranged in pairs to stride the trap-jaws and pivotally connected to permit their adjustment to different-sized traps, substantially as described.

2. The combination in a device for setting animal-traps, of the clamping-arms forked to stride the trap and pivotally connected, one of said clamping-forks being provided with a seat for the trap, and means for connecting and holding the free ends of said arms, substantially as described.



3. In a clamping device for setting animal-traps, the bifurcated and pivotally-connected arms thereof, each having the arms of its fork pivotally connected for permitting their adjustment, in combination with means for connecting and holding the free ends of said arms, substantially as described.

4. The combination in a device for setting animal-traps, of the pivotally-connected and adjustable clamping-arms arranged in pairs and adapted to be adjusted to different-sized traps, and the handle extensions of said arms, substantially as described.

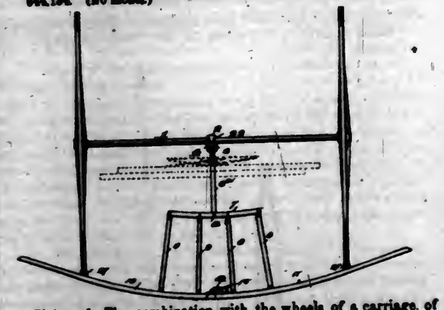
5. The combination in a trap-setting clamp, of the forked arms pivotally connected at their adjacent ends, and means for adjustably connecting said arms, one with the other, substantially as described.

6. In a clamping device for setting animal-traps, the forked and pivotally-connected arms thereof, each having the arms of its fork pivotally connected to permit their adjustment, in combination with means for adjustably connecting and holding the free ends of said arms, one of the clamping-forks being provided with a seat for the trap, and a pivoted cross-bar for supporting the treadle-bar of the trap, substantially as described.

606,567. CHIMNEY-CLEANER. ABBIE MERRIMAN, Saltburn, England. Filed Nov. 30, 1897. Serial No. 660,275. (No model.)

Claim.—In a machine for sweeping chimneys, the combination of a flat plate adapted to fit a fireplace and provided with a door, a casing attached to said plate, an operating-handle supported thereon, a drum journaled in said casing, guide-pulleys also journaled in said casing, a guide-pulley fastened to the top of the chimney, a rope or chain with its ends wound in opposite directions on said drum and passing over said guide-pulleys and a brush attached by its handle to said rope or chain, substantially as described.

606,568. CARRIAGE-CLOCK. HARRY W. MITCHELL, Pueblo, Colo. Filed June 30, 1897. Serial No. 642,956. (No model.)



Claim.—1. The combination of the slotted holder having a pocket, and side flanges and a cover, substantially as described, and secured to the dashboard or curtain of a vehicle over a hole therein; with a timepiece set in said holder, face inward, a screw or stud secured to the timepiece engaging a slot in the holder, and a spring or springs to prevent rattling of the timepiece in the holder, substantially as and for the purpose described.

2. The combination of the dashboard or curtain provided with a hole or sight-opening, a holder fastened to the outside of the dashboard or curtain over said hole; and a cover hinged to the holder; with a timepiece secured in said pocket, and the springs E, E, interposed between the timepiece and back of pocket all substantially as and for the purpose described.

3. The combination of the dashboard or curtain provided with a hole or sight-opening, and a holder fastened to the outside of the dashboard or curtain over said hole and provided with a slot as D; with a timepiece secured in said pocket, and screws or studs *d* and *d'* on the back of the timepiece engaged in the slot D, and the springs E, E, interposed between the timepiece and back of pocket, all substantially as and for the purpose set forth.

4. The herein-described holder, or watchcase, for the purpose described, consisting of a case having a pocket A open at front and closed at top by a cover C; side flanges as B for the engagement of fastening devices; vertical slot as D, and curved lower end *d'*, with the opening *a*, all substantially as and for the purpose described.

606,569. ROCKER ATTACHMENT FOR BABY-CARRIAGES. GEORGE L. MORGAN, Kokomo, Colo. Filed July 10, 1897. Serial No. 644,154. (No model.)

Claim.—1. The combination with the wheels of a carriage, of folding rockers and means for securing said rockers to said wheels for converting the carriage into a cradle, substantially as set forth.

2. The combination with the wheels of a carriage, of folding rockers, and clamps for securing said rockers to said wheels for converting the carriage into a cradle, substantially as set forth.

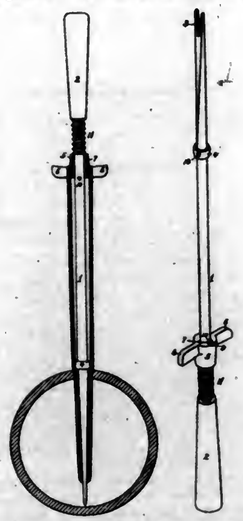
3. The combination with the wheels of a carriage, of folding rockers, means for securing said rockers to said wheels, and means for holding said rockers in folded position, as set forth.

4. The combination of a carriage, sectional rockers secured thereto and adapted to be positioned beneath the wheels for converting the carriage into a cradle, and means for securing the rockers in said position, substantially as set forth.

5. The combination of a carriage, sectional rockers pivoted to the axle thereof and adapted to be folded when not in use, and means for uniting the sections of said rockers when desired for use, substantially as set forth.

6. The combination of a carriage, an arm pivoted to the axle thereof, a transversely-extending arm pivoted thereto, links pivoted at one end to said transversely-extending arms, rocker-sections to which the opposite ends of the links are pivoted, and means for uniting the said rocker-sections, substantially as set forth.

7. The combination of a carriage, a clamp for attachment to the axle thereof, an arm pivoted at one end to said clamp, a transversely-extending arm pivoted to the opposite end of said arm, links pivoted at one end to said transversely-extending arm, rocker-sections to which the opposite ends of the links are pivoted, a latch pivoted to one of the rocker-sections and adapted to engage the opposite section for uniting them, and means for attaching said rockers to the wheels of the vehicle, substantially as set forth.



8. The combination of a carriage, clamping members secured to the axle thereof, an arm pivoted to the clamping member, a transversely-extending arm pivoted to the opposite end of said arm, links pivoted at one end to the transversely-extending arm rocker-sections to which the opposite ends of the links are pivoted, a casing carried by one of said sections and provided with a slot through its top wall, a projection carried by the opposite section and adapted to extend within the casing, a dog pivoted to said section and adapted at one end to extend through the vertical slot of the casing, means for holding the dog in said position, and clamps carried by the rocker-section for engaging the wheels of the vehicle, substantially as set forth.

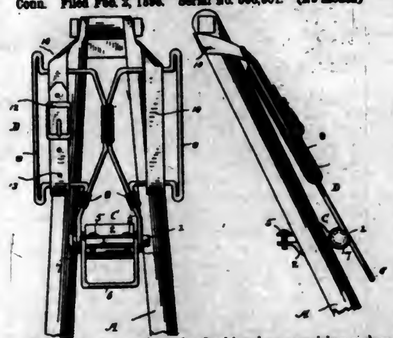
9. The combination of a carriage, a clamp composed of two members adapted to embrace the axle and be secured together, one of said members having its ends bifurcated, an arm pivoted in said bifurcated end, a transversely-extending arm secured to the opposite end of said pivoted arm, links pivoted at one end of said transversely-extending arms, rocker-sections to which the opposite ends of the links are pivoted, means for uniting said sections, clamps carried by the rocker-

sections to engage the wheels of the vehicle, a spring secured to one of the clamping members and extending to the opposite side of the axle, said spring provided with a handle portion and formed with notches, and a pin carried by the upper end of the pivoted arm for engaging the notches, whereby the rocker is held in position, substantially as set forth.

10. The combination of a carriage, a clamp adapted to be secured to the axle thereof, an arm pivoted to said clamp, a transversely-extending arm secured to said pivoted arm, links secured at one end to said transversely-extending arm, rocker-sections, each section being tubular are provided with a longitudinal slot having notches in opposite sides thereof, clamps of the same contour as the rocker-section and having contractible portions, said clamps adapted to be positioned within the tubular rocker and by the expansion of its contractible portions to engage the notches thereof, the opposite ends of the links being pivoted to these clamps, means for uniting the rocker-sections, and clamps carried by the rocker-section for engaging the wheels of the vehicle to secure the rocker in position, substantially as set forth.

606,570. PUNCTURE-REPAIR NEEDLE. EDWIN P. MCALLISTER, Clifton Heights, Pa. Filed July 22, 1897. Serial No. 645,518. (No model.)

Claim.—1. A puncture-repair needle comprising a stem constructed at the inner end for entering the puncture in the tube and having, some distance from said inner end, a stop knob or collar, in combination with a winged sleeve adapted to slide on the stem of the needle, and means for retaining said winged sleeve in its retracted position.



2. A puncture-repair needle consisting of a stem having a flattened and notched inner end, a stop knob or collar some distance therefrom, a winged sleeve free to slide on said stem, and provision for retaining said winged sleeve in its retracted position.

3. A puncture-repair needle consisting of a stem constructed at the inner end for entering the puncture in the tube and for receiving and retaining a rubber band or bands, a winged sleeve free to slide on said stem and having a longitudinal slot or groove therethrough, and a lug or pin projecting from the stem and serving by engagement with the inner end of the sleeve to retain the same in its retracted position, or, when brought into line with the groove, permitting the forward movement of the sleeve.

4. A puncture-repair needle consisting of a stem constructed at the inner end for entering the puncture in the tube, and for receiving and retaining a rubber band or bands, a winged sleeve free to slide on said stem and having a longitudinal slot or groove therethrough, and a notch in its inner end, and a pin or lug projecting from the stem and adapted to occupy the notch in the sleeve when the same is retracted, and to permit the forward movement of the sleeve when its slot or groove is brought into line with the pin.

5. A puncture-repair needle consisting of a stem constructed at the inner end for entering the puncture in the tube and for the reception and retention of a rubber band or bands, a winged sleeve free to slide on said stem and having a longitudinal slot or groove therethrough, a pin or lug projecting from said stem and serving by its contact with the inner end of the sleeve to retain the same in its retracted position, and a spring acting upon said sleeve and serving to press the same against said lug or pin.

606,571. PARCEL-CARRIER. DANIEL J. MCCARTHY, Ansonia, Conn. Filed Feb. 2, 1898. Serial No. 668,801. (No model.)

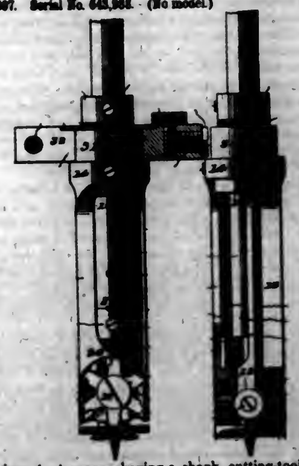
Claim.—1. A parcel-carrier for bicycles comprising a clamp provided with a stud 1, means for securing said clamp in place and a shelf or bracket formed from a single blank of wire pivoted on said stud and provided with a loop 6 formed from the mid-length of the blank which serves as a stop to limit the downward movement of the shelf or bracket when moved to operative position, said shelf or bracket being adapted to be folded up against the bicycle-fork when not in use.

2. The combination with clamp C consisting of upper and lower arms, a spring, a stud 1 and screws by which the stud is locked between the arms and the clamp is secured in place, of a shelf or bracket pivoted on said stud and provided with a loop 6 which engages the clamp to limit the downward movement of the shelf or bracket and straps by which parcels are held upon the shelf or bracket and the latter is held against the bicycle-fork when not in use.

606,572. PIPE-WRENCH. JAMES H. MCDONALD, Evansville, Ind. Filed Nov. 4, 1897. Serial No. 657,333. (No model.)

Claim.—1. An improved pipe-wrench consisting of a ratcheted bar having a fixed jaw, a stirrup loosely mounted on said bar, having its legs extending below the under edge of said bar, a block or dog pivotally mounted between said arms, free to rock and having a tooth or pawl at the upper angle of its top and rear side and normally out of engagement with the toothed or serrated under edge of the bar, and with the cross-bar of the stirrup resting on the upper edge of the bar said dog or block and the legs of the stirrup adapted to move backward upon the initial contact with the pipe whereby the tooth or pawl is forced into contact with the serrated surface of the bar and the cross-bar of the stirrup is raised above the upper edge of the bar.

2. In a wrench and in combination with a ratcheted bar having a fixed jaw, a pivoted jaw having a tooth or pawl and a gripping-face made smooth and declining downwardly, a stirrup straddling the bar and having spaced legs between which the pivoted jaw is mounted and free to rock, said stirrup normally resting directly on the upper edge of the ratcheted bar to maintain the pivoted jaw normally out of contact with the ratchet-surface of said bar, the legs of the stirrup and the pivoted jaw moving rearward upon the initial contact with the object to be gripped whereby the tooth or pawl of the pivoted jaw is thrown into contact with the ratchet-surface of the bar and the stirrup is raised to elevate its cross-bar above the upper edge of the ratcheted bar.



606,573. WITHDRAWN.

606,574. WOOD BLOCK FOR PAVING. JAMES NIGHTINGALE, New York, N. Y. Filed Apr. 6, 1897. Serial No. 630,998. (No model.)

Claim.—A wood block for floors having rabbeted sides, and angular rabbets underneath and back of the rabbeted sides, and having also tongues at the ends adapted to be fitted to the rabbeted sides, and having also angular rabbets at the ends underneath and back of the tongues, substantially as described.

606,575. AUGER. ASARIAH V. PEARL, Lebanon, Mo. Filed July 9, 1897. Serial No. 643,964. (No model.)

Claim.—1. An auger having a shank, cutting-tools operatively connected with for actuation by the shank, to form an angular bore, and a non-rotatable guide-frame having spaced alined bearings in which the shank is mounted, said frame corresponding in cross-sectional area and contour with the exterior contour or periphery of the cutting-tools, to fit snugly in the bore formed thereby, substantially as specified.

2. An auger having a bit-carrying shank, a non-rotatable guide-frame having spaced alined bearings in which said shank is mounted, and having cut-away sides forming discharge-openings, and side cutters mounted upon said frame and operatively connected with the shank, the upwardly-moving sides of said side cutters being arranged contiguous to the openings in the frame, substantially as specified.

3. An auger having a bit-carrying shank, a non-rotatable guide-frame having spaced alined bearings in which said shank is mounted, and having cut-away sides forming discharge-openings, side cutters mounted upon said frame and operatively connected with the shank, the upwardly-moving sides of said side cutters being arranged contiguous to the openings in the frame, and chip-deflecting fingers or projections on the guide-frame arranged terminally contiguous to the peripheries of the side cutters, substantially as specified.

4. An auger having a bit-carrying shank, a guide-frame provided with upper and lower spaced alined bearings in which the shank is mounted, and also provided with parallel diagonally opposite cross-sectionally angular arms, and side cutters mounted upon the sides of the frame and operatively connected with the shank, downwardly-moving sides of the side cutters being arranged in the paths, respectively, of said cross-sectionally angular arms of the frame, whereby said arms fit in the angles of the bore formed by the auger, substantially as specified.

5. An auger having a bit-carrying shank, a guide-frame having upper and lower alined bearings in which the shank is mounted, said frame comprising a diametrically elongated block arranged contiguous to and above the plane of the bit, parallel guide-arms arranged at the diametrically opposite angles of the block, and a collar connecting the upper extremities of the arms, and side cutters revolubly mounted upon the guide-block, parallel with its side surfaces and flush with the outsides of said arms and operatively connected with the shank, substantially as specified.

6. An auger having a rotatable bit-carrying shank, a non-rotatable frame having bearings in which said shank is mounted, and including a guide-block, side cutters mounted upon the guide-block and operatively connected with the shank, and diametrically opposite fin-removing disks removably mounted upon the frame with their axes perpendicular to the plane of the axes of the side cutters and with their faces flush with the contiguous outer surfaces of the guide-block, substantially as specified.

7. An auger having a rotatable bit-carrying shank, a non-rotatable frame having bearings in which said shank is mounted, and including a guide-block, diametrically opposite side cutters mounted upon the guide-block and operatively connected with the shank, and diametrically opposite fin-removing disks removably mounted upon the frame with their axes perpendicular to the plane of the axes of the side cutters, and with their outer faces flush with the contiguous surfaces of the guide-block, substantially as specified.

8. An auger having a rotatable bit-carrying shank, a frame provided with upper and lower bearings in which said shank is mounted, and including a diametrically elongated guide-block, side cutters mounted upon opposite sides of said guide-block and operatively connected with the shank, the sides of the frame between the planes of the inner surfaces of the side cutters being channeled to form grooves of which the floors correspond in cross-sectional contour with the periphery of the bit carried by the shank, and fin-removing disks countersunk in the ends of the guide-block with their outer faces flush with the contiguous surfaces thereof, substantially as specified.

9. An auger having a rotatable bit-carrying shank, a non-rotatable frame having bearings in which the shank is mounted and arranged to receive the downward thrust of the shank, said frame having at its upper end a collar and at its lower end a guide-block, connected by spaced cross-sectionally angular guide-arms, a collar on the shank to communicate thrust therefrom to said collar, side cutters mounted upon the guide-block, with their outer sides flush with the guide-arms and a spider or propeller for communicating motion from the shank to the side cutters, said spider having a sleeve fitted upon the shank and bearing terminally upon the upper side of the guide-block, substantially as specified.

10. An auger having a rotatable bit-carrying shank, a non-rotatable cross-sectionally angular frame in which the shank is mounted, said shank being provided with upper and lower means for bearing downwardly upon the frame to impart axial thrust thereto, and side cutters mounted upon the frame flush at their outer sides with the surface of the frame and operatively connected with the shank, substantially as specified.

11. An auger having a rotatable bit-carrying shank, a non-rotatable frame having bearings in which the shank is mounted, said which is adapted to receive axial thrust therefrom, said frame being provided at its upper end with a collar having an enlarged bore, a replaceable bushing removably fitted in said bore, a collar removably secured to the shank contiguous, and adapted to communicate pressure to, said bushing, and of less diameter than the same, whereby the said collar of the frame is relieved of pressure, and side cutters mounted upon the frame and operatively connected with the shank, substantially as specified.

12. An auger having a rotatable bit-carrying shank, a non-rotatable guide-block in which the shank is mounted, side cutters mounted upon the guide-block, and a spider or propeller carried by the shank and having radial wings provided with concaved front faces for successively engaging the arms of the side cutters, substantially as specified.

13. An auger having a rotatable shank, a bit having an upwardly-projecting collar removably fitted upon the lower end of the shank, a non-rotatable guide-block having a bearing for the shank and receiving downward thrust therefrom, said block being provided with a depending sleeve into which the collar of the bit fits, a bearing-ring interposed between the guide-block and the bit to communicate thrust from the former to the latter and inclosed by said sleeve, and side cutters mounted upon the guide-block and operatively connected with the shank, substantially as specified.

14. An auger having a rotatable bit-carrying shank, a non-rotatable guide-frame having bearings in which the shank is mounted, and carrying side cutters operatively connected with the shank, said frame having at its upper end a bearing portion or seat, and a holder removably fitted upon said bearing portion or seat, and having clamping devices whereby it may be secured to maintain the frame at the desired angular adjustment, and having a graduated ring concentric with the bit-carrying shank, substantially as specified.

15. An auger having a rotatable bit carrying shank, a non-rotatable guide-frame having bearings in which the shank is mounted, and carrying side cutters operatively connected with the shank, said frame having at its upper end a bearing portion or seat and having clamping devices whereby it may be secured to maintain the frame at the desired angular adjustment, a graduated ring mounted for rotary adjustment upon the holder, and means for locking said ring at the desired adjustment with relation to the holder, substantially as specified.

16. An auger having a rotatable bit-carrying shank, a non-rotatable frame in which said shank is mounted, and carrying side cut-

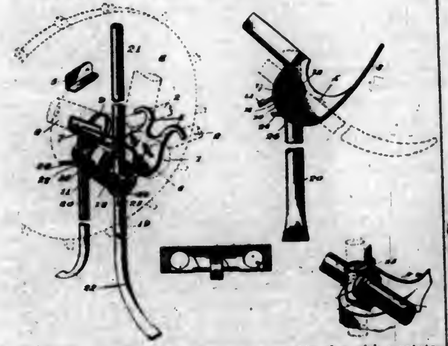
ters which are operatively connected with the shank, a holder having a split collar adapted to fit a seat at the upper end of the frame, a set-screw for contracting said collar to clamp the seat of the frame, a graduated ring countersunk in the holder concentric with the bore of the collar, and a locking-screw for the ring, substantially as specified.

606,576. ALUMINIUM SULFID AND PROCESS OF MAKING SAME. DMITRY ALEXANDROWITCH PENIAKOFF, Huy, Belgium. Filed Apr. 5, 1895. Serial No. 544,658. (No specimens.) Patented in Austria Jan. 28, 1893, No. 43,718; in France Apr. 5, 1893, No. 229,154; in England Apr. 5, 1893, No. 30,604; in Germany May 9, 1893, No. 79,781, and May 19, 1894, No. 80,063; in Belgium Oct. 4, 1893, No. 106,629; in Luxemburg Dec. 12, 1893, No. 1,942; in Italy Dec. 31, 1893, No. 53,001, and in Spain Feb. 9, 1894, No. 15,321.

Claim.—1. The herein-described process of producing aluminium sulfid or double compounds thereof with other metallic sulfids, which consists in treating heated sulfate of alumina, either alone or mixed with other metallic sulfates, by means of bisulfid of carbon or oxysulfid of carbon, at a temperature below the fusing-point of aluminium sulfid, substantially as described.

2. The herein-described process of producing aluminium sulfid, which consists in treating heated sulfate of alumina with a sulfid of carbon at a temperature below the fusing-point of aluminium sulfid, substantially as described.

3. The herein-described new substance, viz: porous aluminium sulfid, substantially as set forth.



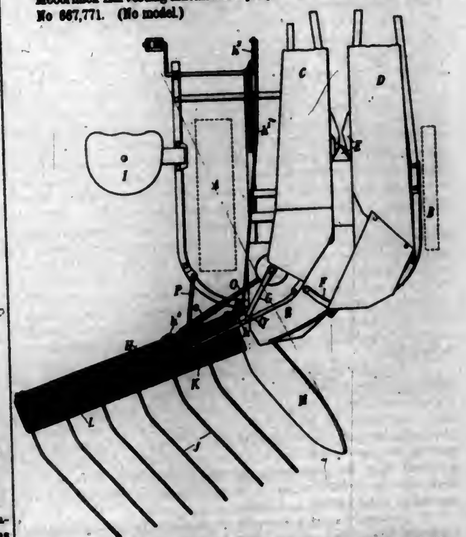
606,577. METALLIC CROSS-TIE. WILLIAM F. PENNER, Richardsville, Ky. Filed Apr. 3, 1893. Serial No. 676,934. (No model.)

Claim.—1. A device of the class described comprising a bottom plate, sides secured to the bottom plate and provided at their upper edges with recesses adapted to receive rails, the central and end top plates secured to the sides and provided at their adjacent edges with means for engaging the rails, the end plates being removable, and the blocks arranged between the sides and extending above the bottoms of the recesses and adapted to support the rails out of contact with the sides, substantially as described.

2. A device of the class described comprising a bottom plate, sides provided with upper and lower outwardly-extending flanges, secured to the bottom plate and having recesses at their upper edges, the central and end top plates secured to the upper flanges of the sides and forming clamps for engaging the bottoms of rails, and wooden blocks arranged within the tie and extending above the bottoms of the recesses and adapted to support the rails, substantially as described.

606,578. BICYCLE-SUPPORT. PAUL PERSON, Stockton, Cal. Filed Aug. 7, 1896. Serial No. 602,046. (No model.)

Claim.—1. In a bicycle-support, the combination with a rotatable shaft, of supporting-legs having feet journaled in said shaft so as to be adapted to turn on their longitudinal axes, pins projecting from the said legs, engaging devices adapted to contact with the ends of the pins, and means for holding the legs in supporting position, said parts being so disposed and related that the engaging devices actuate the pins and turn the legs on their longitudinal axes when said legs are moved to supporting position, whereby the feet of said legs are spread.



2. In a bicycle-support, the combination with a casing or housing connected to the bicycle, of a shaft journaled in said casing or housing, legs provided with feet and journaled in the shaft so that they may turn on their longitudinal axes, pivoted pins passing through the legs and loosely into the casing, said legs being normally held in raised position, but adapted for rotation with the shaft and for turning on their longitudinal axes to spread their feet when thrown around to support the bicycle, and means for holding said legs in supporting position.

3. In a bicycle-support, the combination with a casing or housing connected to the bicycle, of a shaft rotatably mounted in the casing, legs provided with feet and normally held in raised position, said legs being journaled in the shaft so that they may turn on their longitudinal axes, collars on the legs to prevent them from sliding in the shaft, pivoted screws passing through the legs and loosely into the casing, said parts being so disposed and related that when the legs and shaft are turned to bring the former to supporting position, the engagement of the pivot-screws with the casing will cause the legs to turn on their longitudinal axes thereby spreading their feet, and means for holding said legs in supporting position.

4. In a bicycle-support, the combination with a casing or housing connected to the bicycle, of a spring connected to said casing or housing and provided with a pin, a shaft journaled in the casing and provided with a friction-roller adapted to ride on the spring and abut on the pin, and supporting-legs connected to the shaft and normally held in raised position by the engagement of the spring and friction-roller, said supporting-legs being adapted to be lowered to support the bicycle and when so lowered be held locked by the engagement of the friction-roller with the pin.

5. In a bicycle-support, the combination with a casing or housing adapted for attachment to the bicycle, of a spring connected to the casing and provided with a pin, a shaft journaled in the casing and provided with a friction-roller adapted to ride on the spring and to lock with the pin, legs journaled in the shaft and provided with feet, and pivot-pins connected to the legs and projecting loosely into the casing, said parts being so disposed and related that the spring normally holds the legs in raised position, but when said legs are lowered to support the bicycle they turn on their longitudinal axes and spread the feet and are held in supporting position by the engagement of the friction-roller with the pin connected to the spring.

606,579. BUNDLE-CARRIER FOR CORN-BINDERS. JOHN W. PRIDMORE and EDWARD A. JOHNSTON, Chicago, Ill., assignors to the McCormick Harvesting Machine Company. Filed Jan. 24, 1898. Serial No. 667,771. (No model.)

Claim.—1. In combination with a binder that binds and discharges its bundles with the corn standing vertically, a bundle-carrier pivoted at its lower end to the harvester-frame, a connection between the carrier and the machine, and means for adjusting this connection whereby the upper end of the carrier can be raised and lowered.

2. In combination with a binder that binds and discharges its bundles with the corn standing practically vertical, a bundle-carrier pivoted at one end to the harvester, a connection between the carrier and the machine, an end stop attached to the carrier and actuated therewith when the carrier is moved, the carrier being positioned at an inclination to the vertically-positioned binder, substantially as and for the purpose described.

3. In combination with a binder that binds and discharges its bundles while the corn stands on end, a bundle-carrier that is pivoted at one end to the frame of the machine beneath the floor which supports the butts of the corn and the other end adjustably supported from the machine in a plane above that of the floor whereby the bundles are transported in an inclined position.

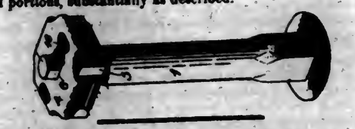
606,580. SCRAPER FOR ROADWORK OR DITCHING. JOHN R. RICE, East Chain, Minn. Filed Sept. 24, 1897. Serial No. 652,914. (No model.)

Claim.—1. In a scraper, the combination with a scraper proper, of a draft-bar, pivoted rods connecting said scraper and draft-bar, and cutters mounted on said pivoted rods, substantially as described.

2. In a scraper, the combination with a scraper proper, of a draft-bar, pivoted rods connecting said scraper and bar, cutters mounted on said rods, and adjustable devices connecting said scraper and draft-bar for varying the inclination of the former, substantially as described.

3. In a scraper, the combination with a scraper proper, of a draft-bar, pivoted rods connecting said scraper and bar, and rotatable cutting-disks mounted on said pivoted bars, substantially as described.

606,581. STOVEPIPE. WALTER P. RIVIERE, Taylor, Tex. Filed Nov. 27, 1896. Serial No. 613,823. (No model.)



Claim.—1. A stovepipe-joint comprising a hollow body having an enlarged closed end, a thimble substantially in alinement with the small open end of the body, a second thimble extending from one side of the hollow body substantially at right angles to the first-named thimble, the closed end of the body being provided with a covered opening to one side of the thimble extending therefrom and said thimbles being in communication with the body, substantially as specified.

2. A pipe-joint comprising a hollow body of cylindrical cross-section having an enlarged closed end and a comparatively small open end arranged eccentrically with respect to the closed end, a thimble extending from the closed end of the body, substantially in alinement with the open end, a covered opening in the closed end to one side of the thimble, and a second thimble extending from the side of the body, substantially at right angles to the first-named thimble, and adjacent to the enlarged end of said body, substantially as specified.

606,582. NUT-LOCK. JOHN ROHLIN, Bureka, Kans., assignor of one-half to A. R. Shaw, same place. Filed Oct. 12, 1897. Serial No. 654,994. (No model.)

Claim.—1. The combination with a bolt having a polygonal portion, and a nut arranged on the bolt, of a locking-plate having spring-arms detachably interlocked with the nut and bowed outward adjacent to the front face of the same, said locking-plate being provided with openings adapted to permit a tool to be introduced into the bowed portions, substantially as and for the purpose described.

2. In a nut-lock, the combination with a bolt having a polygonal extension, and a nut arranged on the bolt, of a locking-plate having an opening to fit the extension and provided with spring-arms engaging the side faces and the back of the nut and bowed outward adjacent to the front face of the same, said plate being provided with side openings adapted to permit a tool to be introduced into the bowed portions, substantially as described.

606,588. CAR-COUPLING. GEORGE T. ROHN, Herriman, Ill. Filed Jan. 12, 1898. Serial No. 666,630. (No model.)

Claim.—1. The combination with a coupling and pivoted hook, of a laterally-extended, spring-actuated pivoted arm carried by the hook, and designed to effect the elevation of the opposing hook, substantially as specified.

2. The combination with a coupler provided with a depression adjacent to one side, and with a pivoted hook adjacent to its opposite side, of an angular laterally-extended arm pivoted within the slot in said hook, and a spring bearing against said arm, substantially as specified.

3. The combination with a coupler provided with a depression adjacent to one side, of a pivoted hook adjacent to the other side of the coupler, an angular laterally-extending hook-elevating arm pivotally mounted in a longitudinal slot in the said hook, a spring mounted within the slot and designed to retain the arm in its normal position, a shaft extending laterally across the car, an arm carried by the shaft and operatively connected with the hook, a connecting-rod likewise connected to said hook and extending to the top of the car, and handles upon the connecting-rod and shaft, whereby the hook may be elevated to uncouple the cars and may cause the uncoupling of the opposed hook through the medium of the laterally-extending arm, substantially as specified.

606,584. VALVE-INDICATOR. ELLIS L. ROWE, Troy, N. Y., assignor to the Rensselaer Manufacturing Company, same place. Filed Jan. 27, 1898. Serial No. 668,221. (No model.)

Claim.—1. In an indicator for valves, the combination of a stationary blind, and the stationary legend behind and above the blind; with a bracket carrying a movable legend and operated by and from the valve-spindle so as to raise said movable legend above the blind, thereby obscuring the stationary legend, or lower the movable legend behind the blind, thereby uncovering the stationary legend, substantially as described.

2. In an indicator for valves, the combination of the standard and blind, said standard projecting above the blind and carrying a legend on its face above the blind; with a movable bracket operated from the valve-spindle adapted to slide upon the standard and carrying a legend, said bracket obscuring the stationary legend when raised, and said blind obscuring the movable legend when the bracket is lowered, substantially as described.

3. In an indicator for valves, the combination of the parallel standard and blind fixedly attached to the casing, said standard projecting above the blind and carrying a legend on its outer face, with a movable bracket adapted to slide upon the standard and carrying a legend on its outer face; and means for operating said bracket from the valve-spindle, said bracket obscuring the stationary legend when raised, and said blind obscuring the movable legend when the bracket is lowered, substantially as described.

4. In a valve-indicator, the combination of a blind and a standard parallel with and behind the blind, having a legend on its front face above the blind; with a movable legend adapted to be reciprocated between the standard and blind and to obscure the fixed legend when raised, and to be itself obscured by the blind when lowered.

and means for raising and lowering said movable legend operated from the valve-spindle, substantially as described.

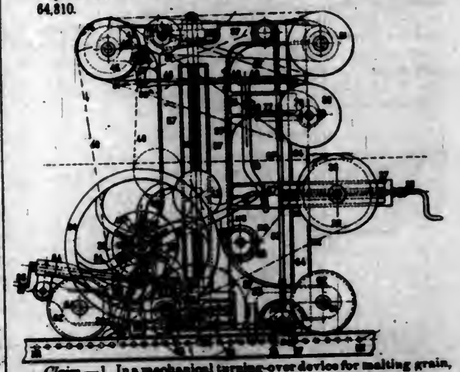
5. In a valve-indicator, the combination of a support adapted to be secured to the valve-casing, a blind attached to one side of said support, and a standard attached to said support parallel with and behind the blind, said standard having a fixed legend on its front face above the blind, with a movable legend operated from the valve-spindle adapted to be reciprocated between the standard and blind and to obscure the fixed legend when raised, and to be itself obscured by the blind when lowered, substantially as and for the purpose described.

6. In an indicator for valves, the combination of the parallel blind and standard rigidly connected to a support detachably secured to the casing, said standard having a legend on its outer face; with a vertically-movable bracket operated by and from the valve-spindle and carrying a legend on its outer face adapted to obscure the stationary legend when the bracket is raised, and to be itself obscured when the bracket is lowered, substantially as and for the purpose described.

7. The combination with a valve, of an indicator consisting of a blind and a standard parallel with and behind the blind, said standard having a fixed legend on its outer face above the blind; with a bracket having a loop adapted to embrace the standard and a legend on the outer face of said loop, said bracket having a ring loosely engaging the valve spindle, whereby the bracket is reciprocated when the valve-stem is rotated, and the legend on the outer face of the bracket obscured by the legend on the standard when the bracket is raised, or itself obscured by the blind when the bracket is lowered, substantially as described.

8. The combination with the valve, of a support detachably connected thereto, a blind outside of and connected to said support, and the standard parallel with and behind the blind, also connected to said support, said standard having a fixed legend on its outer face above the blind; with a bracket having a loop carrying a legend on its outer face and adapted to embrace the standard and said bracket also having a threaded annulus engaging a threaded portion on the valve spindle, whereby the bracket is reciprocated when the valve-stem is rotated, so as to cause the legend on the outer face of the bracket to obscure the legend on the standard when the bracket is raised, or to be obscured by the blind when the bracket is lowered, substantially as and for the purpose described.

9. The combination with the spindle and casing, of a valve; of an indicator, consisting of a blind and a standard parallel with the blind, said standard bearing a legend on its outer face above the blind, a threaded sleeve secured to the spindle above the stuffing-box, and a bracket having a threaded ring engaging said sleeve, and a loop fitting over said standard, said loop having a legend on its outer face obscured by the blind when the bracket is lowered, and obscuring the legend on the standard when the bracket is raised, substantially as described.



10. The combination with the spindle and casing of a valve, of a valve-indicator, consisting of a support detachably connected to the casing beside the stuffing-box thereof, a blind and a standard parallel with the blind, both secured to the said support, said standard bearing a legend on its outer face above the blind, a threaded sleeve made fast to the spindle above the stuffing-box, and a bracket having a threaded ring engaging said sleeve and a loop embracing said standard, and having a legend on its outer face obscured by the blind when the bracket is lowered, and obscuring the legend on the standard when the bracket is raised, all substantially as and for the purpose described.

606,585. CAR-BRAKE. JOSEPH RUFF, Chicago, Ill. Filed Oct. 15, 1897. Serial No. 655,202. (No model.)

Claim.—In a device of the class described, the combination with a car provided in its platform with a transverse slot, of a brake-staff, a ratchet-wheel mounted on the brake-staff, and located at the upper face of the platform of the car, the curved pawl pivoted between its ends and having two arms extending forward and arranged at an angle to each other, one of the arms engaging the ratchet-wheel, a spring holding such arm in engagement with the ratchet-wheel, a lever fulcrumed between its ends to the platform of the car and provided at one end with an upwardly-extending arm projecting through the slot and located at the outer side of the other arm of the pawl and adapted to engage the outer edge thereof, a spring engaging the lever and holding the arm thereof normally at the outer end of the slot and out of engagement with the pawl, whereby the latter is permitted to vibrate independently of the lever without vibrating the latter, and a depressible pin extending upward from the other end of the lever, substantially as described.

606,586. MALT-STIRRER. JULES A. SALADIN, Nancy, France. Filed May 8, 1895. Serial No. 548,593. (No model.) Patented in England Sept. 3, 1891, No. 14,857, and in Germany Oct. 10, 1892, No. 64,810.

Claim.—1. In a mechanical turning-over device for malting grain, the combination with spiral shovels mounted on vertical shafts, of a frame in which the shafts have bearing, means for automatically raising and lowering said frame, a tension-pulley acting on the belt of a main pulley, to draw said belt into operative engagement with said pulley, and means for automatically releasing said tension-pulley at the completion of the operation of the machine, whereby the operation of the shovels and the movement of the carriage both cease, substantially as described.

2. In a mechanical turning over apparatus for malting grain, the combination with a traveling carriage of the improved turning-over mechanism consisting of spiral shovels, shafts carrying said shovels, a frame to support the shaft, means for revolving the latter, screws for raising the frame and lowering it, a tension-pulley to preserve the operative tension of the belt, means for automatically releasing said pulley at the end of the raising or lowering movement, a movable shaft carrying all of the gears imparting motion to the mechanism, means for automatically dropping said shaft at the end of the turning-over movement, and a single transverse carriage for transporting the upper carriage to another compartment for working, substantially as described.

3. In a mechanical turning-over apparatus for malting grain, the combination with a main pulley of a tension-pulley, a lever on which the tension-pulley is mounted, a toothed sector on said lever a worm adapted to mesh therewith, a pivoted frame carrying said worm, a prop supporting the frame when the worm is in mesh, and means for automatically removing said prop, substantially as described.

4. In a mechanical turning-over apparatus for malting grain, the combination with the main driving-pulley of a tension-lever and pulley, a toothed sector on the lever, a worm adapted to mesh therewith, a pivoted frame carrying the worm, a prop to support said frame when the worm is meshed with the sector on the tension-lever, a friction-brake to engage a driven pulley, and a lever to set said brake, the end of said lever being in the path of the end of the tension-lever when the latter is released, substantially as described.

5. In a mechanical turning-over apparatus for malting grain, the combination with a carriage and with wheels which propel said carriage, of a driving-pulley, a gear driven by said pulley, a movable shaft carrying said gear, a toggle-lever to move said shaft, a rod connected to said lever, and a device for operating said rod to throw the gear into and out of mesh, said device being operated by a movable part of the apparatus, substantially as described.

6. In a mechanical turning-over mechanism for malting grain, the combination with spiral shovels on vertical shafts, of a frame carrying said shafts, a carriage on which said frame is mounted, means for propelling said carriage, a gear through which movement is transmitted, a vertically-movable shaft carrying said gear, a prop to support the shaft and keep the gear in mesh, and a cam projection on the rail along which the carriage travels, to engage a toe on the prop and remove it from beneath said shaft to unmesh the gear and arrest the movement, substantially as described.

7. The combination in a mechanical turning-over device, of a track arranged over a grain-compartment, a carriage running on said track carrying rotating shovels, means for giving said shovels a motion lengthwise of the compartment, through the grain, a motion for raising the shovels out of the grain and then returning the shovels to the starting-point, all operated by the same power, substantially as described.

8. The combination in a mechanical turning-over device, of a track arranged over a grain-compartment, a carriage running on said track carrying shovels for turning the grain, means for giving said shovels vertical motion into the grain, a rotary motion therein, a horizontal motion through the grain, a vertical motion out of the same, and a return motion to the starting-point, all operated by the same belt, substantially as described.

9. The combination in a mechanical turning-over device, of a series of tracks, arranged over a series of grain compartments, a transferring-carriage, a carriage running on said tracks carrying shovels for turning the grain, means for giving vertical motion to said shovels to force them into the grain, a rotary motion in the same, a horizontal motion from end to end of the compartment, a motion to lift them out of the grain, and to return them to the starting point and onto the transfer-carriage, all operated by the same power, substantially as described.

10. The combination in a mechanical turning-over device, of a series of tracks arranged over a series of grain-compartments, a transfer-carriage, a carriage adapted to run on said tracks carrying shovels for turning the grain, means for transferring the shovel-carriage from the transfer-carriage to the tracks, for forcing the shovels into the grain, for giving the shovels a rotary motion in and horizontally through the grain, a rising motion through the grain at the end of the horizontal motion, and for returning the shovel-carriage to the transfer-carriage, all operated by the same power, substantially as described.

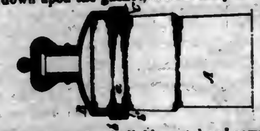
11. The combination in a mechanical turning-over device, of a track set over a grain-compartment, a carriage running on said tracks carrying a series of shovels, means for giving said shovels a vertical motion into the grain in the compartment, and means for stopping said vertical motion automatically, substantially as described.

12. The combination in a mechanical turning-over device, of a track set parallel with a grain-compartment, a carriage running on said track carrying a series of shovels, means for simultaneously giving said shovels a rotary motion in the grain, and a horizontal one through the same, and automatic means for stopping said motions as the shovels reach the end of their horizontal travel, substantially as described.

13. The combination in a mechanical turning-over device, of a track set parallel with a grain-compartment, a carriage running on said track carrying a series of shovels, means for raising said shovels clear of the grain at the end of its travel through the same, and means for automatically stopping the upward motion of the shovels, substantially as described.

14. The combination in a mechanical turning-over device, of a series of tracks arranged parallel with a series of grain-compartments, a transferring-carriage, a carriage adapted to run over said tracks, and carrying a series of rotary shovels, means for moving said shovels through and out of the grain and then carrying the shovel-carriage back toward its starting-point and onto the transferring-carriage, and automatic devices for stopping said backward motion, substantially as described.

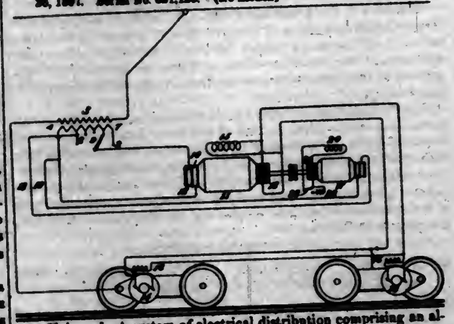
606,587. FRUIT-JAR AND CAN OPENER. JOHN J. SCHAIBLE, Glen, Tex., assignor of forty-nine one-hundredths to P. B. Hunter, El Paso County, Tex. Filed Nov. 9, 1897. Serial No. 657,960. (No model.)



Claim.—1. A spring-metal wrench made from a strip or "blank" of metal having sharp corners upon its longitudinal edges, the said blank being twisted into the form of a spiral along its central portion, and having said twisted portion bent into the form of an arc of a circle, substantially as described.

2. A spring-metal wrench made from a strip or "blank" of metal of greater width than thickness having sharp corners upon its longitudinal edges, the said blank being twisted into the form of a spiral along its central portion, and having said twisted portion bent in the direction of its thickness into the form of an arc of a circle, substantially as described.

606,588. CAP FOR BOTTLES. WILLIAM A. SCHOLEY and FRANK C. SCHRADER, Philadelphia, Pa. Filed Oct. 21, 1896. Serial No. 609,572. (No model.)



Claim.—1. A bottle-cap having a flange with an annular recess formed therein and a gasket within the recess, the end of the flange being spun down upon the gasket, substantially as described.

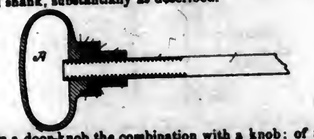
2. A bottle-cap made of pliable metal and comprising the body B having a flange b offset to form a recess b^2 and a gasket C contained within the recess of the flange, the lip b' of the flange which extends beyond the gasket being spun down upon the same, substantially as described.

3. The combination of a bottle having a shoulder, and a screw-threaded extension above the shoulder, with a cap having a deep flange, a screw-thread thereon adapted to the screw-thread on the bottle, and a gasket mounted in an annular recess formed by an extension of the flange, the end of said flange being spun down upon the gasket, said gasket resting upon the shoulder of the bottle, substantially as described.

606,589. SYSTEM OF ELECTRICAL DISTRIBUTION. CHARLES F. SCOTT and BENJAMIN G. LAMME, Pittsburg, Pa., assignors to the Westinghouse Electric and Manufacturing Company, same place. Filed Jan. 26, 1897. Serial No. 621,123. (No model.)

Claim.—1. A system of electrical distribution comprising an alternating-current-supply circuit, one or more direct-current motors, a rotary transformer taking alternating current from said supply-circuit and supplying direct current to said motor or motors and means for varying the alternating-current electromotive force supplied to the rotary transformer and thereby varying the direct-current electromotive force and consequently the speed of the motors.

2. A system of electrical distribution comprising an alternating-current-supply circuit, one or more direct-current motors, a rotary transformer receiving alternating currents from said supply-circuit and supplying direct current to said motors, a stationary transformer interposed between the source of alternating current and the rotary transformer and means for varying the electromotive force supplied by the stationary-transformer secondary and thereby varying the speed of the motors.



3. A system of electrical distribution comprising an alternating-current-supply circuit, a stationary transformer the primary winding of which receives current from said supply-circuit, a rotary transformer supplied from the secondary of said stationary transformer, one or more direct-current motors connected to the direct current terminals of the rotary transformer and means for varying the active length of the secondary winding of the stationary transformer and thereby varying the speed of the motor or motors.

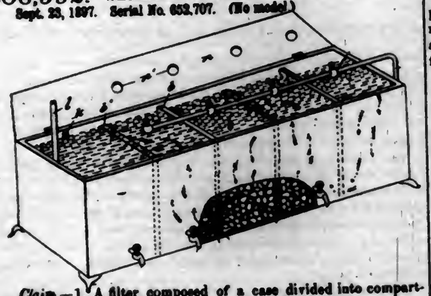
4. A system of electrical distribution comprising an alternating-current-supply circuit, a rotary transformer, means for driving the same at synchronous speed, one or more direct-current motors connected to the direct-current terminals of said transformer, and means interposed between said transformer and the alternating-current-supply circuit for varying the electromotive force applied to the transformer and thereby varying the speed of the motor or motors.

606,590. KNOB ATTACHMENT. JOHN H. SHAW, New Haven, Conn., assignor to the Sargent & Company, same place. Filed Mar. 5, 1898. Serial No. 672,697. (No model.)

Claim.—1. In a door-knob, the combination with the knob; of the spindle formed separate therefrom; an independent knob-shank, adapted to be screwed onto said spindle; an interlocking nut capable of longitudinal movement on said spindle but incapable of rotation

independent thereof; means for locking said nut with said shank, and a sleeve adapted to fit loosely over said nut and be secured to said knob and shank, substantially as described.

2. In a door-knob the combination with a knob; of a separate spindle substantially square in cross-section, with threaded corners of its square cross-section; an independent knob-shank adapted to be screwed onto said spindle, and having interior recesses at one end; an interlocking nut adapted to slide on said spindle but incapable of rotation independent thereof, being provided with lugs adapted to engage in said recesses of said shank; and a sleeve adapted to engage said shank and knob and hold them together, substantially as described.

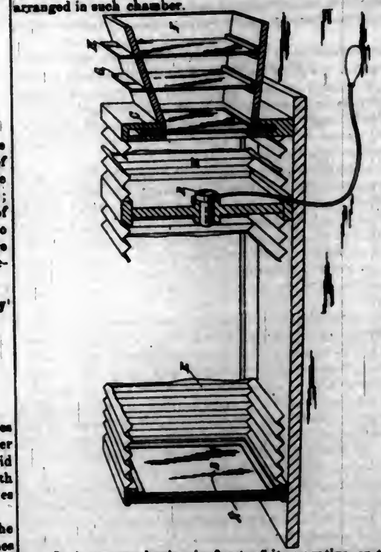


606,591. PLIERS. JOHN C. BLACK, Brooklyn, N. Y. Filed July 31, 1897. Serial No. 646,663. (No model.)

Claim.—1. The combination with a pair of pliers having notches formed in the inner faces of the jaws thereof, a groove at the inner ends of said notches, a deeper opening at the outer ends of said notches, and dies situated within said notches and provided with grooves at their ends to receive pins that are inserted in said grooves and openings.

2. The combination with a pair of pliers having notches in the inner faces of the jaws, grooves at the inner ends of said notches and openings at the outer ends of said notches, dies situated within said notches and provided with grooves at the ends thereof, pins situated within the grooves at the inner ends of the notches and extending to a greater extent in the notches of the jaws, and tapered pins in the openings at the outer ends of the notches which extend into the grooves of the dies.

606,592. WATER-FILTER. HENRY SUELL, Pittsburg, Pa. Filed Sept. 23, 1897. Serial No. 653,707. (No model.)



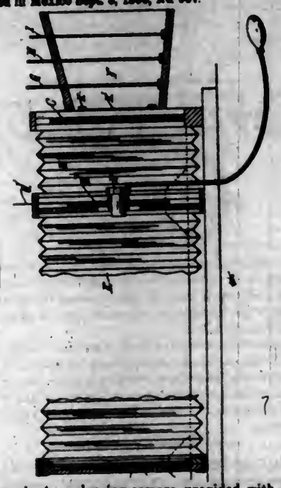
Claim.—1. A filter composed of a case divided into compartments of unequal size, each alternate partition forming the compartment being cut away at the top to permit the water to pass to the succeeding compartment, each alternate partition being provided with openings at the bottom, means for admitting water to each compartment separately, means for draining each compartment, and each of said compartments except the last being filled with filtering material, substantially as shown and described.

2. A filter composed of a case, a series of partitions dividing the case into compartments, each alternate partition being provided with openings at the bottom, the intervening partitions being provided with cut-away portions, said openings and cut-away portions permitting the water to pass from one compartment to the succeeding one, means for admitting water to each of the compartments separately, a pipe to draw the water off after it reaches a certain point, each of said compartments except the last being filled with a filtering material, and means for draining each compartment, substantially as shown and described.

606,593. PHOTOGRAPHIC COPYING-CAMERA. HERMAN STERNBERG, Prospect Park, Cal., assignor of one-half to Henry P. Ware, San Gabriel, Cal. Filed July 12, 1897. Serial No. 644,308. (No model.) Patented in Mexico Sept. 3, 1896, No. 907.

Claim.—1. A camera having a light-diffusing chamber arranged in front of its negative or transparency holder.

2. A camera provided with a light-diffusing chamber arranged between the lens and the source of light; and light-diffusing screens arranged in such chamber.



3. A camera having in front of its negative or transparency holder, a light-diffusing chamber; and a light-diffusing screen arranged in such chamber.

4. A camera comprising a plate-holder; a negative or transparency holder; a lens arranged between the plate and negative holder; a light-diffusing chamber arranged in front of the negative or transparency holder; and light-diffusing screens arranged in the light diffusing chamber.

5. The improvement in the art of printing from negatives or positives which consists in intercepting the side rays of light by arranging a light-diffusing chamber in front of the negative or positive, and diffusing the light used in printing by passing it through light-diffusing screens arranged within such chamber.

606,594. PHOTOGRAPHIC COPYING-CAMERA. HERMAN STERNBERG, Prospect Park, Cal., assignor of one-half to Henry P. Ware, San Gabriel, Cal. Filed July 12, 1897. Serial No. 644,449. (No model.) Patented in Mexico Sept. 3, 1896, No. 907.

Claim.—1. An enlarging-camera provided with a negative or transparency holder; a vignette arranged in front of such holder; and a light-diffusing chamber arranged in front of the vignette.

2. An enlarging-camera comprising a plate holder; a lens arranged between the plate-holder and the negative or transparency holder; a vignette-holder arranged in front of the negative or transparency holder; and a light-diffusing chamber arranged in front of the vignette-holder.

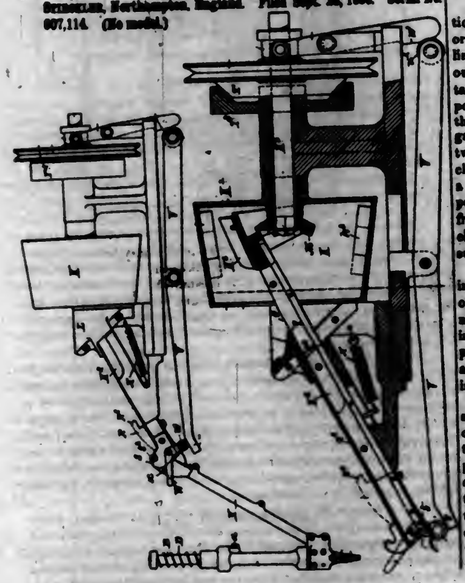
3. In a camera, the combination of a transversely-movable negative-holder and a lens vertically movable independently of the body of the camera.

4. In an enlarging-camera, the combination of a transversely-sliding negative-holder; a plate-holder; and a vertically-adjustable lens between the negative-holder and the plate-holder.

5. In an enlarging-camera, the combination of a transversely-sliding negative-holder; a light-diffusing chamber in front of the negative-holder; a plate-holder; and a vertically-adjustable lens between the negative-holder and the plate-holder, substantially as and for the purpose set forth.

6. In an enlarging-camera, the combination set forth of the negative or transparency holder; the light diffusing chamber, arranged in front of such holder, and colored light-diffusing screens arranged in the chamber.

7. An enlarging-camera comprising a light-diffusing chamber provided with a plurality of light-diffusing screens, one of which is of a tint to regulate the actinic quality of the white light; a plate-holder; a negative-holder between the light-diffusing chamber and the plate-holder; and a lens between the negative-holder and the plate-holder.



8. A camera provided with a negative-holder and a plate-holder; a lens between the negative-holder and the plate-holder; a light-diffusing chamber in front of the negative-holder and provided with two white screens; and a tinted screen arranged between the two white screens to regulate the actinic quality of the white light.

606,595. PROCESS OF MAKING PLANISHED SHEET-IRON. JOHN STRAUSS, Muncie, Ind. Filed Jan. 22, 1898. Serial No. 667,501. (No specimens.)

Claim.—1. The herein-described process of making planished sheet-iron consisting in rolling the sheets in packs, separating and changing the sheets in the pack to present different surfaces, reheating the pack to a low temperature, changing the sheets and rerolling, substantially as described.

2. The herein-described process of making planished sheet-iron, consisting in rolling the sheets in packs, separating and changing the sheets, reheating to a low temperature, subjecting the sheets to a solution of verdigris and paraffin-wax; exposing the sheets to the air to dry; subjecting the dried plates to a solution of indigo and paraffin-wax, removing the surplus solution and finally polishing the sheets substantially as described.

606,596. APPARATUS FOR DRIVING TACKS. ALBERT E. STRICKLER, Northampton, England. Filed Sept. 26, 1896. Serial No. 607,114. (No model.)

Claim.—1. In apparatus for feeding tacks, the combination of a rotary chamber to contain the tacks to be fed into the driver or tacker and means for rotating the said chamber; one or more longitudinally-adjustable ribs or lifters projecting from the interior of the rotary chamber, by which ribs or lifters the tacks are elevated when the chamber rotates, a piece in the interior of the chamber having a double inclined surface or surfaces inclining toward each other, onto which the tacks fall from the ribs or lifters; a chute to which the double inclined piece is attached, the said chute having in the top a narrow slot or opening into which the shanks of the tacks enter and down which they pass, the said tacks being supported by their heads on the top edges of the sides of the slot or opening; and means for imparting to the chute a jogging or reciprocating motion as the chamber rotates so as to cause the tacks to pass down the chute, substantially as hereinbefore described.

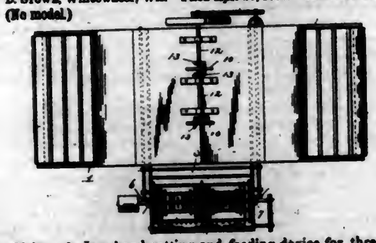
2. In a tack-feeding apparatus, the combination of a fixed frame and a rotary chamber to contain the tacks to be fed into the tack-driver, with a chute which is mounted in longitudinal guides in the frame and into which the tacks are caused to enter by the rotation of the chamber; and a series of tappets in the interior of the chamber engaging with the chute in combination with a spring, for imparting a longitudinal reciprocating motion to the chute in its guides, substantially as described.

3. In a tack-feeding apparatus, the combination of a rotary chamber to contain the tacks to be fed into the tack-driver, the said chamber having one end open and being adapted to rotate on a horizontal, or approximately horizontal axis, with a stationary hopper against which the open end of the chamber rotates, and an inclined reciprocating chute passing through an opening in the said hopper to the interior of the chamber, means for feeding the tacks into the chute by the rotation of the chamber, and means for imparting a longitudinal reciprocating motion to the chute, substantially as described.

4. In a tacking apparatus, the combination with a chamber to contain the tacks to be fed into the tack driver, the said chamber having one end open and arranged to rotate on a horizontal or approximately horizontal axis, a stationary hopper against which the open end of the said chamber rotates and by which the tacks are supplied to the chamber, an inclined reciprocating chute passing through an opening in the hopper to the interior of the chamber, means for feeding tacks into the chute by the rotation of the chamber, and a projection on the chute reciprocating through a passage in a plate or deflector formed on or attached to the interior of the hopper, the said projection serving to prevent the tacks from obstructing the passage through the chute, substantially as hereinbefore described.

5. In apparatus for feeding tacks into a tack driver or tacker, the combination with a longitudinally-reciprocating chute down which the tacks pass into the tacker, of a plow-shaped deflector having a passage therethrough, and a projection reciprocating in the said passage in the deflector, for preventing the tacks from obstructing the passage through the chute, substantially as hereinbefore described.

6. In a tack-feeding and tack-driving apparatus, the combination of a rotary chamber to contain the tacks to be fed into the driver or tacker, an inclined reciprocating chute composed of two parts flexibly connected together at their abutting ends to form a continuous chute for the passage of tacks from the rotary chamber to the tack-driver or tacker, a gate or stop at the lower end of the upper portion of the said chute to prevent the passage of the tacks therethrough when the two parts of the chute are separated, the said gate or stop being displaced or removed when connecting together the two portions of the chute and replaced when the said portions of the chute are detached, and a lever pivoted to the chute engaging with a projection to prevent the chute from reciprocating when the two portions of the chute are separated, the said lever being disengaged from the projection by the act of connecting the two parts of the chute so as to permit of the reciprocating movement of the chute, substantially as hereinbefore described.

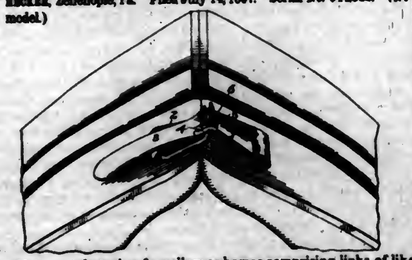


7. In a tack-driving apparatus or tacker the combination of an inclined chute down which the tacks pass into position to be acted on by the driver proper, a separating-blade for separating the lowermost tack from the rest of the tacks in the chute, the said separating-blade being operated by the plunger which carries the driver proper, and means for varying the time in the movement of the plunger at which the separating-blade shall be operated, substantially as hereinbefore described.

8. In a tack-driving apparatus or tacker, the combination of a supply chamber or chute from which tacks pass into position to be operated on by the driver proper, a separating-blade operated so as to admit one tack at a time into the passage in which the driver proper works, a recessed or flattened part on the driver proper to admit of the head of the lowermost tack in the chute to project into the passage in which the driver proper works when the lower end of the said driver is below the separating-blade, a shoulder on the lower end of the driver proper below the said flattened or recessed portion, which shoulder when the plunger rises comes into contact with the under side of the said lowermost tack and causes the shank of the

tack to enter point downward the passage in which the driver proper works, substantially as hereinbefore specified.

9. In a tack-driving apparatus, the combination of a supply-chute from which tacks pass into position to be operated on by the driver proper, and spring-jaws having a conical recess and a passage for guiding the tacks in a straight direction into the work, with a driver proper, provided with a shoulder on the lower end which, as the driver rises, comes into contact with the lower side of the head of the tack and causes the shank to enter point downward the passage in which the driver proper works, the operating end of the said driver proper being tapered at the sides at right angles to the said shoulder so as to be easily freed from between the said spring-jaws after driving a tack, substantially as hereinbefore described.



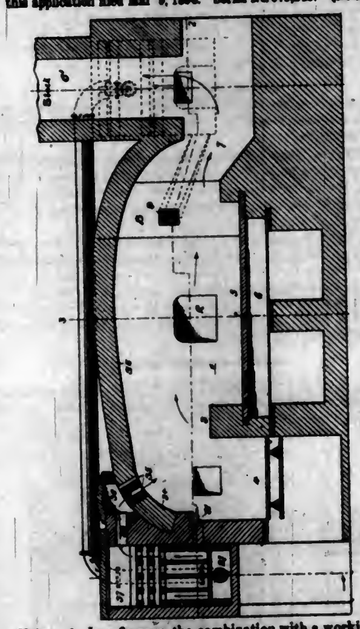
606,597. SELF-FEEDER FOR THRESHING-MACHINES. GEO. D. STOWE, Whitewater, Wis. Filed Apr. 20, 1897. Serial No. 632,933. (No model.)

Claim.—1. In a band-cutting and feeding device for threshing-machines, the combination with a frame, receiving-belts and a feeding-belt interposed between the receiving-belts and moving at right angles thereto, of knife-shafts above the belts, knives upon said shafts, a dome rising from the casing and provided with a trough at its center, the walls of said trough being provided with slots to permit the knife-shafts to extend through the trough, and mechanism carried within the trough for actuating said shafts, substantially as specified.

2. In a band-cutter and feeder, the combination with a frame, receiving-belts and a feeding-belt intermediate of the receiving-belts and moving at right angles thereto, of a pair of knife-shafts disposed above the belts and provided with rotary knives, a casing inclosing the knives and the inner ends of the belts and provided with a dome having a trough at its center extending below the knife-shafts, shafts journaled at the bottom of the trough and geared to said knife-shafts, and gearing intermediate of the shafts journaled in the trough and one of the shafts of a receiving-belt, substantially as specified.

606,598. HAME OR COLLAR FASTENER. CHARLES J. D. STROHECKER, Zelienople, Pa. Filed July 14, 1897. Serial No. 644,522. (No model.)

Claim.—A fastening for collars or hames comprising links of like formation having their side bars converging outwardly and deflected in opposite directions at their free ends, which latter are adapted to interlock by having a deflected end portion of one link passing through the deflected end portion of the opposite link, and a lever fulcrumed upon the cross-bar of the link having its outer end downwardly deflected and having a cam-shaped head notched to snugly receive the cross-bar of the link having the upwardly-deflected end, substantially as and for the purpose set forth.



606,599. LID FOR POTS, &c. JOHN W. STROTHER, West Milford, W. Va., assignor of two-thirds to Floyd E. Morrison, Clarksburg, W. Va. Filed Dec. 30, 1897. Serial No. 664,590. (No model.)

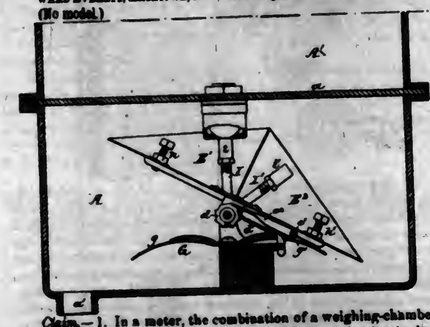
Claim.—1. The combination of a lid, a depending loop arranged at one side of the lid and adapted to engage under the flange or shoulder at the top of a pot, and a depending loop-shaped catch located at the opposite side of the lid and provided with an outwardly-extending thumb-piece, said loop and catch being constructed of a single piece of wire having connecting portions extending from one side of the lid to the other, substantially as described.

2. The combination of a lid, a loop depending from one side of the lid and adapted to engage a pot, the catch, located at the opposite side of the lid and consisting of a depending loop bent outward to form a thumb-piece, said catch and loop being constructed of a single piece of wire having connecting portions extending across the center of the lid, and the curved plates secured to the lid at the edges thereof and fastening the said connecting portions to the same, substantially as described.

606,600. FURNACE. WILLIAM STURGEISSER, Bethlehem, Pa. Original application filed Jan. 26, 1897, Serial No. 620,816. Divided and this application filed Mar 9, 1898. Serial No. 673,315. (No model.)

Claim.—1. In a furnace, the combination with a working chamber, a stack, and a port or neck, of the preliminary heating-chambers situated on opposite sides of the uptake and each provided with an upper compartment, passages which establish communication between the working chamber, the preliminary heating-chambers, and the uptake, and circulating-pipes opening into the upper compartments of said preliminary heating-chambers, substantially as and for the purposes described.

2. In a furnace, the combination with a working chamber, a stack, and an uptake, of the preliminary heating-chambers situated on opposite sides of the uptake and each having below its roof a perforated arch which forms an upper compartment, the mixing-pipes leading from the upper compartments of said chambers, the air and steam pipes entering said upper compartments and discharging to the mixing pipes, and passages which establish communication between the preliminary heating-chambers, the working chamber, and the uptake, substantially as described.



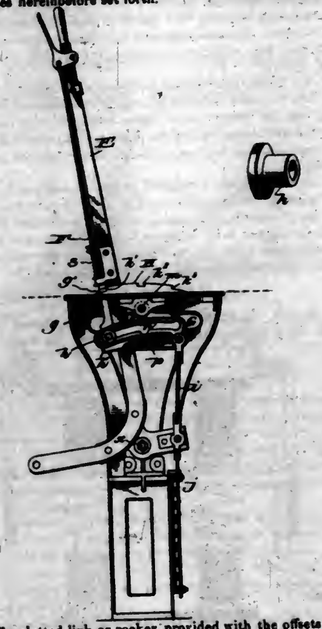
3. In a furnace, the combination with a working chamber, and a grate-chamber, of the divided regenerative chamber having the lower receiving-compartment, the isolated flues leading from said receiving-compartment of the regenerative chamber, the checker-work located in the regenerative chamber above the isolated flues therein, the mixing pipes or flues discharging into the receiving-compartment of said regenerative chamber, and the passages leading from the grate-chamber into the circulating-spaces between the isolated flues of the regenerative chamber, substantially as described.

4. In a furnace, the combination with the working and grate chamber, of the roof therefor having the arched or deflected portion over the grate-chamber, a regenerative chamber containing checker-work, mixing flues which discharge to the regenerative chamber, passages leading from the grate-chamber to the regenerative chamber, and a delivery-chamber which is in communication with the upper part of the regenerative chamber to receive therefrom and which discharges, through the ports in the arched roof, into the grate-chamber, substantially as described.

5. In a furnace, the combination with a working chamber, and a grate-chamber, of the divided regenerative chamber having the receiving-compartment, the vertical isolated flues in series within the regenerative chamber and arranged therein to provide the circulating-spaces, the checker-work above said flues, the passages leading from the grate-chamber to the circulation spaces of the regenerative chamber, the delivery-chamber over the grate-chamber, ports between the delivery and regenerative chambers, and ports leading from the delivery-chamber to the grate-chamber, substantially as described.

6. In a furnace, the combination with a grate-chamber, of a regenerative chamber having a lower receiving compartment, the checker-work in said regenerative chamber, mixing pipes or flues discharging to the receiving-compartment of the regenerative chamber, a blast-pipe below the grate of the grate-chamber and having branches which lead to the receiving-compartment of the regenerative chamber, passages leading from the grate-chamber to the regenerative chamber, and other passages leading from the upper part of the regenerative chamber back to the upper part of the grate-chamber, substantially as described.

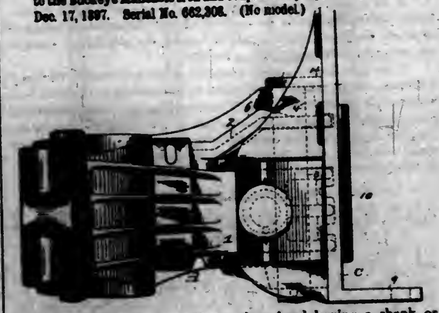
606,601. OSCILLATING METER. ROBERT A. THAYER and EDWARD EVERETT, Allentown, Pa. Filed Aug. 7, 1897. Serial No 647,402. (No model.)



Claim.—1. In a meter, the combination of a weighing-chamber, having an outlet and a valved inlet, a registering mechanism, a shaft rotatably mounted in suitable bearings in the chamber and positively connected with the registering mechanism, a measuring vessel having two compartments rotatably mounted upon said shaft, with means on the vessel for acting directly upon the valved inlet, said vessel being thus loosely pivoted with respect to the registering mechanism, and means carried by the vessel for intermittently connecting the same with the registering mechanism to operate the latter, substantially as described.

2. The combination in a meter, of a weighing-chamber having an outlet and a valved inlet, a registering mechanism, a shaft rotatably mounted in suitable bearings in the chamber and positively connected with the registering mechanism, a measuring vessel having two compartments with adjustable posts in each compartment for acting upon the valve in the inlet, said vessel being loosely pivoted with respect to the registering mechanism, and means carried by the vessel for intermittently connecting the same with the shaft and thus operating the registering mechanism, substantially as described.

3. The combination in a meter, of the measuring-chamber, an inlet therefor, a ball-valve in said inlet, a pivoted measuring vessel having two compartments, means on the vessel for opening the valve when either of the compartments is under the inlet, two springs, one under one compartment the other under the other compartment and set-screws on the pivoted measuring vessel so as to regulate the extent of tilt of the vessel, substantially as described.

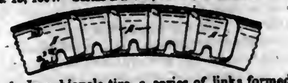


606,602. RAILWAY SWITCH AND SIGNAL MECHANISM. JOHN W. THOMAS, Jr., Nashville, Tenn. Filed Apr. 21, 1898. Serial No. 678,374. (No model.)

Claim.—1. The combination with a double-plunger facing-point switch-lock, and the lever and connections for operating the same, of the latch-lever carried by said lock-lever, the latch, latch-rod and link-block, the quadrant, the tappet, and the pivoted slotted link, connected to the tappet, and engaging the link-block and provided in the lower edge of its slot with an intermediate recess located as described to accommodate the link-block, when the latch is dropped into the intermediate notch of the quadrant, substantially as and for the purposes hereinbefore set forth.

2. The slotted link or rocker, provided with the offsets or cam-ridges p^2 p^3, and the end recess p, and the end recess p', substantially as and for the purposes hereinbefore set forth.

606,603. CAR-COUPLING. JAMES TIERNS, Columbus, Ohio, assignor to the Buckeye Malleable Iron and Coupler Company, same place. Filed Dec. 17, 1897. Serial No. 662,208. (No model.)

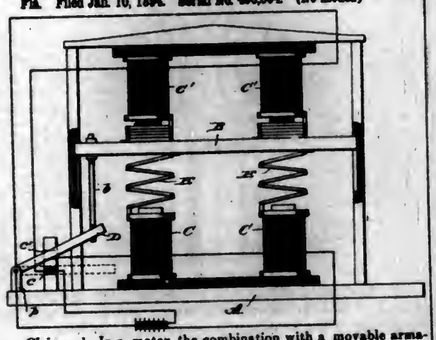


Claim.—1. In a car-coupling, a draw-head having a shank or draw-bar and an arm extending from the draw-head upwardly over the shank in position to receive the pin which holds the draw-head in place and prevents the latter from sagging.

2. The combination with a bracket having a mouth projecting outwardly therefrom, of a draw-head having a shank and an arm extending above the shank and a suitable distance from it, and means for pivotally connecting the draw-head so as to permit it to have normally a lateral movement.

3. The combination with a bracket and a draw-head, of a pin connecting the draw-head pivotally to the bracket, said pin having a head extending from one side and squared, so that it rests and fits against the bracket to prevent the rotation of the pin.

606,604. BICYCLE-TIRE. JACOB TOREN, Grand Rapids, Mich. Filed Oct. 15, 1897. Serial No. 655,326. (No model.)



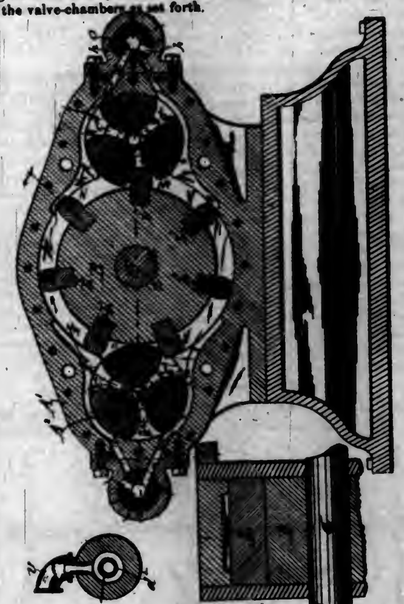
Claim.—1. In a bicycle-tire, a series of links formed from thin elastic plates, the body of said links being formed from a substantially annular blank and made dishing, arms projecting from the rims of these bodies and provided with hooks arranged to engage mortises formed therefor, the arms projecting from the inner side of said links being bent to form a longitudinal spring, substantially as and for the purpose set forth.

2. In a bicycle-tire, cup-shaped links, arms projecting from the rims of said links and arranged to engage with mortises in each succeeding link, the lower or inner arms arranged to form springs to give to the links a longitudinal flexibility, and a support at each side of the arms next to the body, substantially as and for the purpose set forth.

3. In a bicycle-tire, a series of flexible cup-shaped links formed of spring metal and flexibly connected by arms extending from the back edge of one cup and passing into slots in the face of the next succeeding cup, the lower or inner arm being arranged to reciprocate longitudinal of the tire, and a cover detachably secured around said links, substantially as and for the purpose set forth.

606,605. ELECTRIC MOTOR. JONATHAN G. TRUMAN, Lemon City, Fla. Filed Jan. 10, 1894. Serial No. 496,394. (No model.)

Claim.—1. In a motor the combination with a movable armature of a series of connecting bars or plates attached thereto and electromagnets with which the plates are also connected, substantially as set forth.



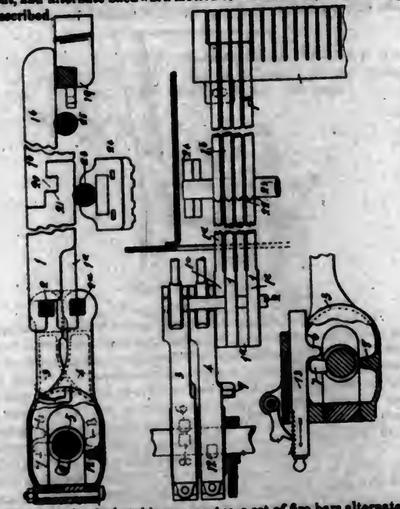
2. In a motor the combination of an armature, a series of connected plates attached to the opposite sides of the armature, magnets to which the plates are attached and means for alternately energizing the magnets substantially as set forth.

3. In an electric magnetic motor the combination with vibratory armature, electromagnets positioned on opposite sides of the same a series of plates, the plates of each series being alternately connected the opposite end plates being attached to the armature and to the magnets, a switch operated by the vibratory armature to alternately make and break circuits and an electric generator or battery, substantially as shown and for the purpose set forth.

606,606. ROTARY ENGINE. JACOB J. UEBERROTH, Syracuse, N. Y. Filed July 26, 1897. Serial No. 645,587. (No model.)

Claim.—1. The combination of the steam-cylinder, the annular steam-chambers on opposite sides of said cylinder and cylindrical valve-cages beyond said chambers all arranged axially at right angles to a straight line passing diametrically through the cylinder, the rotary piston-head having a plurality of pistons projecting from its periphery, rotary steam-induction valves in the aforesaid chambers, and each provided with an axial steam-passage, a plurality of radial steam-channels and abutments projecting from the valve between said channels, exhaust-valves in the aforesaid cages and provided with axial exhaust-channels and separate exhaust-pipes communicating directly with said axial channels, as set forth and shown.

2. The combination of the steam-cylinder, two annular steam-chambers respectively on opposite sides of said cylinder and cylindrical valve-cages beyond the said chambers all arranged axially at right angles to a straight line passing diametrically through the steam-cylinder and formed with steam-passages from the said valve-cages around opposite sides of each of the aforesaid steam-chambers and directly to the inner wall of the steam-cylinder, the rotary piston-head provided with a plurality of radially-projecting pistons, rotary steam-induction valves in the aforesaid chambers and provided with axial induction-passages and radial channels leading from said passages, abutments projecting from said valves between the radial channels and formed with convex divergent walls forming steam-tight joints with the traversing pistons, cylindrical exhaust-valves in the cages provided with axial steam-passages and radial channels extending from the axial passages to communicate with the steam-passages in the valve-chambers as set forth.

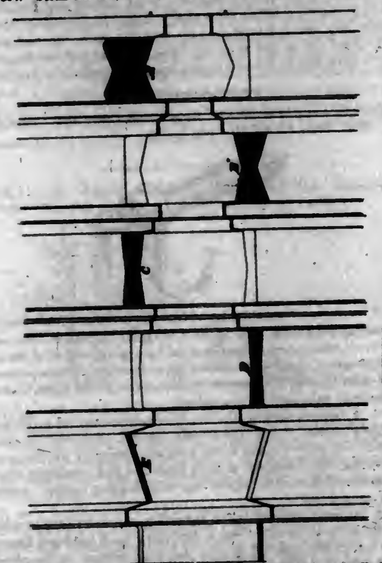


3. The combination with the engine-bed, of the steam-cylinder, two annular steam-chambers respectively on opposite sides of said cylinder and cylindrical valve-cages beyond said chambers all arranged axially at right angles to a straight line passing diametrically through the cylinder, the rotary piston-head provided with radially-projecting pistons, rotary steam-induction valves in the aforesaid chambers, steam-induction pipes journaled in the axis of said valves, and cylindrical exhaust-valves in the aforesaid cages, of pinions attached to the aforesaid induction-pipes, cranks attached to the exhaust-valves, racks engaging said pinions, a rod connecting the two cranks and a hand-lever pivoted to the engine-bed and connected to the said racks and connecting-rod substantially as set forth and shown.

606,607. MECHANICAL STOKER. JOHN VICARS, the Elder, Boot, and THOMAS VICARS and JOHN VICARS, the Younger, Liverpool, England. Filed Dec. 21, 1897. Serial No. 662,993. (No model.) Patented in England Nov. 30, 1895, No. 22,989.

Claim.—1. In a mechanical stoking apparatus, a set of fire-bars alternately connected to separate cross-bearers, a rotary shaft having actuating connections with the bearers, arranged to give a single forward, and alternate backward motion to the fire-bars, and a cam upon the shaft arranged to hold one set of bars against backward movement during a portion of the rotation; substantially as described.

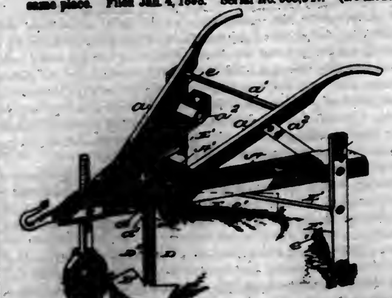
2. In mechanical stoking apparatus, the combination with a set of fire-bars, of separate cross-bearers connected to alternate fire-bars, one series of bars having keys 3 with teeth 6 and 8, a rotating shaft having projections arranged to act upon the teeth, and keys 4 having teeth acted upon by projections on the shaft, and connected with the other fire-bars, and stops upon one series of bars arranged to contact with the cam upon the shaft, to prevent backward motion of the series during a part of the revolution of the shaft; substantially as described.



3. In mechanical stoking apparatus, the combination with a rotary shaft having projections or dogs, of separate keys having projections engaged by the dogs, at least one of the key projections being located upon an adjustable bar carried in the key, and fire-bars connected alternately to cross-bearers actuated by the keys, the connection being arranged to give a single forward motion of variable extent, and alternate backward motion to the fire-bars; substantially as described.

4. In mechanical stoking apparatus, a set of fire-bars alternately connected to upper and lower cross-bars, actuating connections between the cross-bars and a rotatory shaft, the cross-bar of one set of fire-bars being arranged to move the other bars forward, and a cam upon the shaft arranged to prevent rearward movement of one set of bars during a portion of the rearward stroke of the other bars, substantially as described.

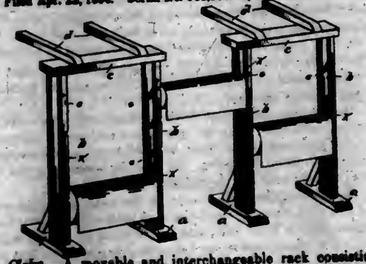
5. In mechanical stoking apparatus, a fire-bar made in two parts, one of said parts having an end groove and a vertical slot, and the other part having a lug to enter the slot, and a reduced end portion arranged to fit in the groove and prevent side movement, and a support for the bar located beneath this loose connection; substantially as described.



606,608. ROLLS. PETER M. WILSON, Munhall, Pa., assignor to The Carnegie Steel Company, Limited, Pittsburg, Pa. Filed May 22, 1897. Serial No. 637,900. (No model.)

Claim.—1. In apparatus for rolling flat sheets or bars, rolls having at the first pass registering projections arranged to form a single upper and lower registering groove in the metal and succeeding passes having symmetrical flatter and wider projections arranged to spread the metal symmetrically in a lateral direction and flatten the grooves to substantially the same amount upon each side.

2. In apparatus for rolling flat sheets or bars, rolls having at the first pass annular projections arranged to form a single upper and a single lower groove in the metal, said grooves registering with each other, intermediate passes provided with registering wider and shallower projections arranged to spread the metal symmetrically on each side, and a pass arranged to narrow the metal slightly and flatten the same.

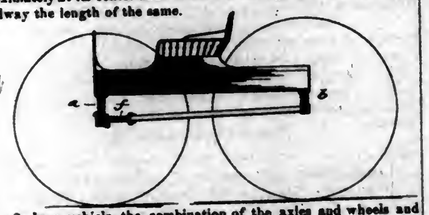


606,609. CULTIVATOR-PLOW. DEWITT C. WEED and FREDERIC ATKIN, Vickery, Ohio, assignors of one-third to Samuel M. Smart, same place. Filed Jan. 4, 1898. Serial No. 665,547. (No model.)

Claim.—1. In a cultivator of the character described the combination of the V-shaped frame provided with suitable handles, with a cutter-post secured to the middle of said frame and having on its lower end at right angles thereto a cutter-shovel, and on the rear of said frame the cutter-shovels E, E, having the cutter portions thereof at right angles and set at an angle to the direction of movement of the plow, as set forth.

2. In a cultivator of the character described a cutter-shovel located near the front of said plow and having a flaring cutting edge, and cutter-shovels, substantially as described, located near the rear of said plow-frame and having their cutting-shovels set backward at an angle to the direction of movement of the plow, substantially as and for the purpose set forth.

606,610. DISPLAY-RACK. HARLEY D. WELLS, Spencer, W. Va. Filed Apr. 22, 1896. Serial No. 588,567. (No model.)



Claim.—A movable and interchangeable rack consisting of a base the uprights provided with notches forming bearings for the carrying-pins, said uprights being united at their upper ends and provided with lateral extensions by which they are held in position when arranged in pairs, the uprights having notches or bearings on their exterior by which the racks when the location thereof is changed to be set in a straight line are adapted to carry rolls or bolts between them, thus one pair forming three racks in combination with a headed tapering pin for carrying the roll, substantially as set forth.

606,611. VEHICLE. NATHANIEL WESTON, Redmonds, Va. Filed Oct. 9, 1897. Serial No. 654,636. (No model.)

Claim.—1. In a vehicle, the combination of the axles and wheels and body, suitable means for supporting the body on the rear axle, and a coil spring supporting the front end of the body on the front axle, said spring being connected at its respective ends to the axle and to the body whereby the spring may yield vertically and torsionally, as and for the purposes set forth.

2. In a vehicle, the combination of the axles and wheels and body, suitable means for supporting the body on the rear axle, and a

coil-spring supporting the front end of the body on the front axle, said spring being connected rigidly at its upper end to the body approximately at its center and at its lower end rigidly to the axle about midway the length of the same.

3. In a vehicle, the combination of the axles and wheels and body, suitable means for supporting the body on the rear axle and a coil-spring supporting the front end of the body on the front axle, means connecting the upper end of the spring to the body, and means connecting the lower end of the spring rigidly to the axle, said means consisting of a clip clamping the axle and a short bolt having its head engaging over the lower coil of the spring and its threaded shank passing through an aperture in the clip, and a nut on said bolt lying in a recess between the axle and said clip.

4. The combination of a pair of axles and supporting-wheels, a vehicle-body, means for supporting the body on the rear axle, and a resilient support directly connecting the body to the front axle, about midway the length of the latter, said support being yieldable torsionally.

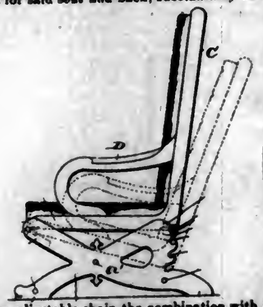
5. In a vehicle, the combination of the axles and supporting-wheels, a reach connected to the rear axle, an elastic device connecting the reach to the front axle, said device being yieldable longitudinally and torsionally.

6. The combination in a vehicle of the axles and supporting-wheels, a reach extending forward from the rear axle, a strong spiral spring connecting the forward end of the reach to the front axle, the respective ends of said spring being rigidly connected to the reach and to the axle.

7. The combination of a pair of axles and supporting-wheels and a reach extending forward from the rear axle, a coil-spring interposed between the forward end of the reach and the axle, and a connecting device connecting the reach to the axle and holding the spring compressed.

8. The combination of a pair of axles and supporting wheels, a reach extending forward from the rear axle, a flexible connecting device connecting the reach to the front axle and a compressed coil-spring interposed between the reach and the axle and adapted to yield laterally and torsionally.

9. The combination of a pair of axles and supporting-wheels, a reach extending forward from the rear axle, a swinging connecting-link connecting the reach to the axle, an eyebolt attached to the front end of the link, a clip connecting the eyebolt to the axle, an eyebolt connected to the rear end of the link and provided with a rigid nut, a plate clamping said nut to the front end of the reach, and bolts connecting the plate to the reach.



10. The combination of a pair of axles and supporting-wheels, a reach extending forward from the rear axle, a coil-spring interposed between the front end of the reach and the front axle, a swinging connecting-link within the spring, and eyebolts connecting the link respectively to the axle and the reach.

11. The combination in a vehicle, of the axles and supporting-wheels, a reach, an elastic device interposed between the forward end of the reach and the front axle, said device being yieldable longitudinally and torsionally, and means connecting the reach to said axle and holding the elastic device compressed, as and for the purpose set forth.

606,612. ADJUSTABLE CHAIR. JOSEPH J. WHITE, New Lisbon, N. J. Filed Feb. 12, 1897. Renewed Dec. 1, 1897. Serial No. 660,420. (No model.)

Claim.—1. In an adjustable chair, the combination with the base comprising the side pieces provided adjacent to their rear ends with supporting-shoulders in different horizontal planes, of a seat pivoted to said base adjacent to its front edge, and lying between said side pieces, supporting means for engaging said shoulders and directly supporting said seat adjacent to its rear end, and a back connected to said seat, whereby said seat can be adjusted vertically between said side pieces, substantially as described.

2. In an adjustable chair, the combination with the base, comprising the side pieces provided adjacent to their rear ends with supporting-shoulders in different horizontal planes, of a supporting-bar engaging said shoulders, and a combined seat and back secured together, said seat being pivoted between said side pieces adjacent to its front end and resting on said bar, between said side pieces at its rear end, whereby said seat and back may be moved vertically between said side pieces, said bar and pivotal connection forming the sole supports for said seat and back, substantially as described.

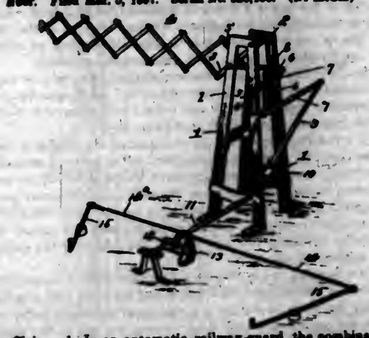
3. In an adjustable chair, the combination with the base including among its members side pieces each provided adjacent to its rear end with supporting-shoulders in different horizontal planes, of supporting means adapted to engage said shoulders and provided with devices for preventing the lateral movement of said side pieces, a seat pivotally connected adjacent to its front edge to said base and having its rear portion directly supported by said supporting means and a back rigidly connected with said seat, substantially as described.

4. In an adjustable chair, the combination with the base including among its members, side pieces each provided adjacent to its rear end with supporting-shoulders in different horizontal planes, of a supporting-bar adapted to engage said shoulders, and provided with devices for preventing the lateral movement of said side pieces, a seat pivotally connected adjacent to its front edge to said base and having its rear portion resting on said bar, a back rigidly connected with said seat and means for preventing the lateral movement of said seat and back with respect to said base, substantially as described.

5. In an adjustable chair, the combination with the base including among its members side pieces each provided adjacent to its rear end with supporting-shoulders in different horizontal planes, of a supporting-bar adapted to engage said shoulders and provided with devices for preventing the lateral movement of said side pieces, a seat pivotally connected adjacent to its front edge to said base and having its rear portion resting on said bar, a back rigidly connected with said seat, and spacing-blocks between said back and seat and the side pieces of said base, substantially as described.

6. In an adjustable chair, the combination with the base, having side pieces provided at their rear ends with plates each having a slot a series of supporting-shoulders at one side of said slot, and attaching means out of the plane of said supporting-shoulders, of a supporting-bar adapted to engage the said shoulders, the seat pivoted at its front end to said base and having its rear end resting on said bar, a back rigidly secured to said seat, substantially as described.

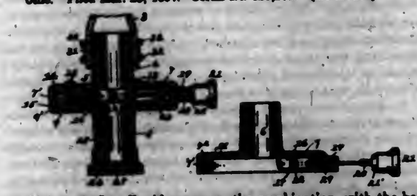
606,613. SAP-SPOUT. REES WILLIS, Colton, N. Y. Filed Apr. 8, 1898. Serial No. 676,941. (No model.)



Claim.—1. A sap-spout provided with a longitudinal channel, a depending hook from said spout, a plugging portion at the rear of said hook, bearing extensions from said plugging portion at the sides thereof and of equal width therewith, and anchoring-lugs projecting from said extensions in opposite directions and of less width than said extensions; substantially as specified.

2. A sap-spout provided with a longitudinal channel, a cylindrical plugging portion at the rear of said channel, horizontal extensions merged into and of equal width with said plugging portion, a web connecting said extensions at their inner ends, and oppositely-extending anchoring-lugs of less width than said plugging portion; substantially as specified.

3. An improved sap-spout consisting of a body portion with a depending lip at its outer end, a depending hook having a flattened inner face, a rib upon the face of said body portion in the plane of said hook, a cylindrical plugging portion, extensions extending therefrom at the sides thereof, a web connecting the inner end of said extensions, and oppositely-extending lugs carried by said web and of less width than the plugging portion; substantially as specified.



606,614. AUTOMATIC ROADWAY-GUARD. WILLIAM O. WEBB, Hooper, Nebr., assignor of one-third to Hiram A. Sturges, Omaha, Nebr. Filed Mar. 5, 1897. Serial No. 626,133. (No model.)

Claim.—1. In an automatic railway-guard, the combination of a support, upright guideways 6 thereon, said guideways being open at their upper ends, a lazy-tongs mounted in said support, the upper end of one of the levers forming the inner section of said lazy-tongs being pivotally secured to said support, a cross-bar carried by the inner, lower end of the other lever of the said inner section, said cross-bar being vertically movable in said guideways, a bell-crank lever 7 pivoted in the support below the lazy-tongs, a substantially horizontal link connecting the upward-extending arm of the bell-crank to one of the levers of said inner section of the lazy-tongs, and means connected to the other arm of said bell-crank lever and adapted to be operated by the passing vehicle whereby the lazy-tongs will be extended during the passage of the vehicle and be folded when said vehicle has passed by the guard, substantially as described.

2. In an automatic railway-guard, the combination of a support, provided with upright guideways open at their upper ends, a lazy-tongs mounted in said support, the upper end of one of the levers comprising the inner section of said lazy-tongs being pivoted to said support, a cross-bar carried by the inner, lower end of the other lever of said inner section, said cross-bar being vertically movable in the guideways and held against lateral movement therein, a substantially horizontal link connected to one of the levers of the inner section of the lazy-tongs beyond their common pivot, a bell-crank lever mounted on a support below the lazy-tongs, one arm of said lever being connected to the end of said link, a crank-shaft below the bell-crank lever, a pitman connected to the other arm of said bell-crank and also to the crank arm on said crank-shaft, another crank-arm on said shaft, and means connected to this latter crank-arm adapted to be operated by the passing vehicle, whereby the guard will be extended during the passage of the vehicle and folded when said vehicle has passed by the guard, substantially as described.

606,615. LIQUID-CONVEYER. WILLIAM J. YORK, Greenfield, Ohio. Filed Mar. 26, 1897. Serial No. 629,205. (No model.)

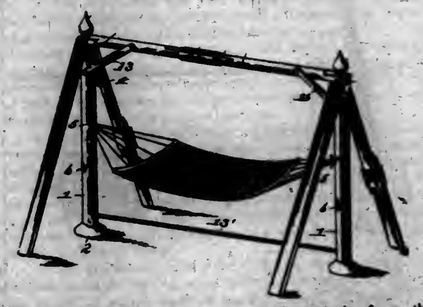
Claim.—1. In a liquid-conveyer, the combination, with the barrel and measuring-gage, of a nozzle, a flexible tube connecting said nozzle and gage, said nozzle comprising two parts, each part having a tube with an outwardly-extending flange, said flanges being secured together face to face, and a valve closing one of said tubes, substantially as set forth.

2. In a liquid-conveyer, the combination, with the barrel and measuring-gage, of a nozzle, a flexible tube connecting said nozzle and gage, said nozzle comprising two parts, one part having a tube 6 with a flange 7, the other part having a tube 8 with a flange 9, and a valve 16 closing one of said tubes, substantially as set forth.

3. In a liquid-conveyer, the combination, with the barrel and measuring-gage, of a nozzle, a flexible tube connecting said nozzle and gage, said nozzle comprising two parts, one part having a tube 6 with a flange 7, the other part having a tube 8 with a flange 9, and a valve 16 controlled by stem 20 and closing one of said tubes, substantially as set forth.

4. In a liquid-conveyer, the combination, with the barrel and measuring-gage, of a nozzle, a flexible tube connecting said nozzle and gage, said nozzle comprising two parts, one part having a tube 6 with a flange 7, the other part having a tube 8 with a flange 9, and a valve 16 controlled by thumb-screw 21 and closing said tube 6, substantially as set forth.

5. In a liquid-conveyer, the combination, with the barrel and measuring-gage, of a nozzle, a flexible tube connecting said nozzle and gage, said nozzle comprising two parts, one part having a tube 6 with a flange 7, the other part having a tube 8 with a flange 9, said flange 7 having a cylindrical projection 7', the packing 15, the valve 16, having grooves 17 and 18, the thumb-screw 21 with stem resting in groove 18, and stem-head 22 engaging groove 17, the thumb-screw being so disposed that the normal pressure of its stem against the valve forces the latter to its seat, said flanges being secured together by screws 13, substantially as set forth.



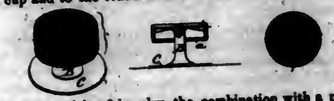
6. In a liquid-conveyer, the combination, with the barrel and measuring-gage, of a nozzle, a flexible tube connecting said nozzle and gage, said nozzle comprising two parts, one part having a tube 6 with a flange 7, the other part having a tube 8 with a flange 9, said flange 7 having a cylindrical projection 7', and a groove 7^2, said flange 9 having an outward projection 9', and a groove 9^2, the packing 15 between said projections 7' and 9', the packing 14 between said grooves 7^2 and 9^2, the lower part of said nozzle having the recess 23, the valve 16 working in said recess and closing said tube 6, said valve having grooves 17 and 18, the hollow threaded boss 19, projected from cylinder 7' and having packing 29, the thumb-screw 21 with stem 20 threaded to screw into said boss, the inner end of said stem working in groove 18, and stem-head 22 engaging groove 17, the threaded stem 20 of the thumb-screw being so disposed that its inner end normally forces the valve 16 to its seat, the tube 8 and flange 9 having the grooves 25, said flanges 7 and 9 being secured together by screws 13, substantially as set forth.

7. In a liquid-conveyer, the combination, with the nozzle inserted in a flexible tube, of a band wired at each side and clamped upon said flexible tube by twisting the free ends of the wires together, substantially as set forth.

8. In a liquid-conveyer, the combination, with the barrel and gage, of a nozzle, a flexible tube connecting said nozzle and gage, said nozzle having a cap 26', and a taper-tube 28 secured in said cap, substantially as set forth.

9. In a liquid-conveyer, the combination, with the barrel and gage, of a nozzle, a flexible tube connecting said nozzle and gage, said nozzle having a cap 26', and a taper-tube 28 secured in said cap, said taper-tube fitting in a perforation in the cap and having a flange 28' inside the cap, substantially as set forth.

606,616. HAMMOCK-FRAME. ABEL A. YOUNG, Williamsport, Ind. Filed June 14, 1897. Serial No. 640,731. (No model.)



Claim.—In a folding portable hammock-supporting frame, the combination of a post having hooks arranged thereon in various positions, and legs movably attached to the upper part of opposite sides of said posts, the legs on one side being adjustable, an upper cross-bar hinged to one of the posts and having a joint intermediate of its ends, substantially as and for the purposes specified.

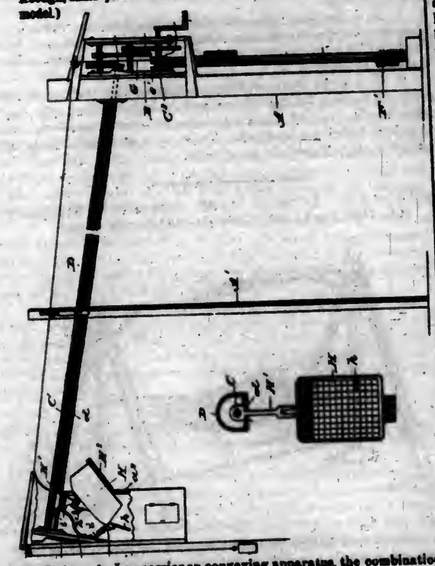
606,617. ARTICLE OF JEWELRY. FRANCIS X. EISENLOHR, Philadelphia, Pa. Filed Aug. 30, 1897. Serial No. 649,972. (No model.)

Claim.—1. In an article of jewelry, the combination with a per-

forated cup open at the top, of an ornamental center within the cup and below the upper edge thereof, a post forming the support for the cup extending through the perforation in the cup and secured both to the cup and to the ornamental center, substantially as described.

2. In an article of jewelry, the combination with a perforated cup, of a post forming the support for the cup passing through the perforation in the cup and secured thereto, with a rosette secured to the end of the post within the cup but not attached to the cup, substantially as described.

3. In an article of jewelry, the combination with a perforated cup, of a post forming the support for the cup, said post having a base at one end and passing through the perforation in the cup, and a rosette secured to the opposite end of the post within the cup but not attached to the cup, substantially as described.



4. In an article of jewelry, the combination of the perforated cup, a post extending therethrough and secured thereto and having its end split, forming fingers, with a rosette secured to the fingers of the post within the cup, substantially as described.

5. The combination, in an article of jewelry, of a cup, a notched disk mounted within the cup, and a rosette mounted above the disk and below the top of the cup, substantially as described.

6. In an article of jewelry, the combination of a cup having an ornamental inner and outer surface and edge, a post secured to the cup, and a ribbed disk having an undulating surface and a serrated edge to represent a rosette said disk being mounted within the cup and attached to the post, substantially as described.

7. In an article of jewelry, the combination of a cup having a ribbed inner and outer surface and edge, a post secured to the cup, and a ribbed disk having an undulating surface and a serrated edge to represent a rosette, said disk being mounted within the cup and below the upper edge thereof, substantially as described.

606,618. **CARRYING APPARATUS.** JOHN ANDERSON, Walla Walla, Wash., assignor of two-thirds to William O. Fallen and John Keough, same place. Filed Feb. 25, 1898. Serial No. 671,886. (No model.)

Claim.—1. In a carrier or conveying apparatus, the combination with a screw-threaded rod or shaft, a block mounted thereon, a receptacle attached to said block, means for imparting movement to the shaft in one direction and means for effecting automatically a reverse movement of the shaft, substantially as shown.

2. In a carrying apparatus, the combination with a screw-threaded shaft, a block and carrier mounted thereon, a train of gear for imparting to the shaft a rapid rotary movement in one direction and means for automatically operating the gearing and shaft in an opposite direction to effect the return of the carrier, substantially as set forth.

3. In a carrying apparatus the combination with a rigidly-mounted slotted tube, a screw-threaded shaft within the same, a block mounted upon the shaft and provided with a depending portion from which a carrier is pivotally suspended, a train of gearing for rotating the screw-threaded shaft in one direction, means for actuating the driving-shaft of the train of gearing in a direction opposite from that from which it is driven manually and a receptacle for the reception of the contents of the carrier when the carrier reaches the limit of its movement in one direction upon the shaft, substantially as shown.

4. In a carrying apparatus, the combination of a track or way, a screw-threaded shaft, a block mounted on said shaft, a carrier pivotally suspended from said block, and a fixed receptacle with which the carrier engages, substantially as shown.

5. In a carrying apparatus, the combination of a carrier, a door having an extended portion and spring for holding the same normally closed, a spring attached to the supporting means of the carrier and to the carrier to maintain the same normally in a horizontal position; together with a receptacle having a portion with which the carrier engages to effect an inclination of the same and means for automatically operating the door against the action of the spring thereof, substantially as shown.

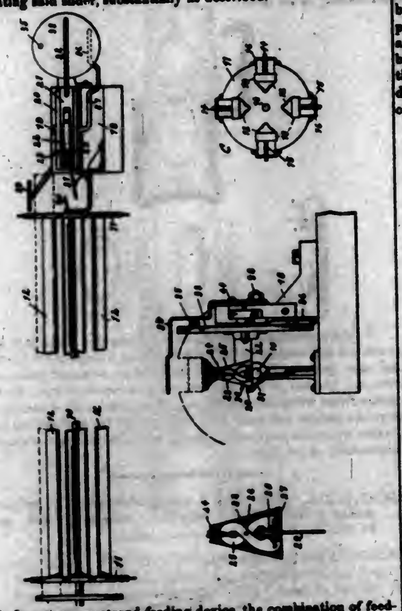
6. In a carrying apparatus, the combination with a supporting-block, a carrier pivotally attached thereto and provided with a spring for holding the carrier normally in a horizontal position, a buffer attached to the carrier so as to project beyond one end of the same, a door held normally closed by a spring, a receptacle having a portion for engagement with the buffer and a spring the terminal portions of which are in line with the block and projecting portion of the door, substantially as shown and for the purpose set forth.

7. In a carrying apparatus, the combination with a covered and slotted track or way, a screw-threaded shaft located therein, a carrier supported by a block which engages with the shaft, a train of gearing in mesh with a pinion on the shaft, the driving-shaft of the train having drums, belts attached to the drums and weights carried by said belts; together with a flexible connection which extends from one of the weights to a point adjacent to the discharge-station of the carrier, for the purpose set forth.

8. In a carrying apparatus, the combination with a covered and slotted track or way, a screw-threaded shaft which extends through the track or way, a block through which the shaft passes, a carrier suspended from the block, a train of gearing the driving-shaft thereof having a drum over which passes a belt, a weight attached to said belt, means for raising the weight manually and means for effecting a rotation of the driving-shaft, substantially as set forth.

9. In a carrying apparatus, the combination with a covered and slotted track or way, a screw-threaded shaft located therein, a carrier in engagement with said shaft, a train of gear for manually rotating the shaft in one direction, a drum mounted on one of the shafts of the train of gear, a weight connected by a belt to the drum, springs or cushions mounted above and below the weight and means for manually raising the weight from a distant station; together with a second drum, belt and weight for actuating the train of gearing and shaft in an opposite direction from what it is operated manually, substantially as shown and for the purpose set forth.

606,619. **STRAW OR STRAND FEEDING DEVICE.** FREDERICK E. ARMOUGHER, Worcester, Mass. Filed Nov. 26, 1897. Serial No. 659,755. (No model.)



Claim.—1. In a straw or strand feeding device, the combination of feed-rolls, a carrier for a bunch of straws, a gripping device, means for moving the gripping device transversely with respect to the bunch of straws to engage a straw at a distance from its end, and means for reciprocating the gripping device substantially in line with the bunch of straws to introduce the ends of successive straws into the bite of the feed-rolls, substantially as described.

2. In a straw or strand feeding device, the combination of feed-rolls, a movable carrier or cradle for a plurality of bunches of straws, a gripping device, means for moving the gripping device transversely with respect to the bunches of straws to engage a straw at a distance from its end, and means for reciprocating the gripping device substantially in line with the bunches of straws to introduce the ends of successive straws into the bite of the feed-rolls, substantially as described.

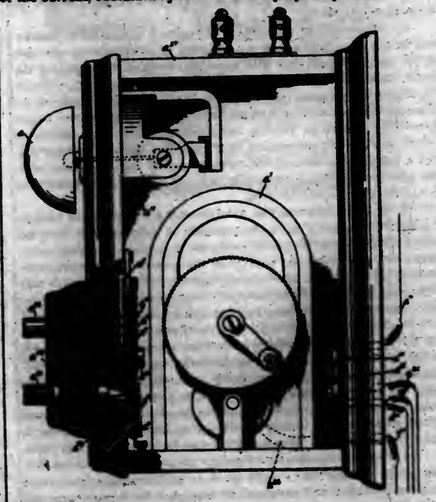
3. In a straw or strand feeding device, the combination of a slideway, means for raising and lowering the slideway, a slider mounted therein and carrying a gripping device, and means for reciprocating said gripping device, substantially as described.

4. In a straw or strand feeding device, the combination of a carrier for a bunch of straws, feed-rolls, a slideway, means for raising and lowering the slideway, a slider carrying a gripping device, and means for reciprocating said slider to introduce successive straws into the bite of the feed-rolls, substantially as described.

5. In a straw or strand feeding device, the combination of a movable carrier, or cradle for receiving a plurality of bunches of straws, a slideway, means for raising and lowering the slideway, a slider mounted therein and carrying a gripping device, and means for reciprocating said slider, substantially as described.

6. In a straw or strand feeding device, the combination of feed-rolls, a carrier for a bunch of straws, a gripping device having spring-pressed jaws, means for moving the gripping device transversely with respect to the bunch of straws, a stop or cam for closing the gripping-jaws into engagement with a straw, at a distance from its end, means for reciprocating the gripping device substantially in line with the bunch of straws to introduce the end of a straw into the bite of the feed-rolls, and a stop or cam for releasing the spring-pressed jaws, substantially as described.

7. In a straw or strand feeding device, the combination of feed-rolls 42 and 43, a cradle or carrier C for receiving a plurality of bunches of straws, a slideway 18, a slider 21 mounted therein and carrying a gripping device, means for reciprocating said slider, means for raising and lowering the slideway, a buncher 20, and means for moving the buncher in opposition to the movement of the slideway to hold the straws in position to be engaged by the gripping device, substantially as described.



606,620. **SYSTEM FOR ELECTRICAL COMMUNICATION.** ALEXANDER T. BROWN, Syracuse, N. Y., assignor to Wilbert L. Smith, trustee. Filed Apr. 9, 1898. Serial No. 676,703. (No model.)

Claim.—1. A party-line system comprising a metallic circuit, one or more stations having responsive devices in the metallic circuit, two or more stations each having a ground-tap and a responsive device therein, a source of electrical energy with an optional ground-tap, placeable in that branch of the metallic circuit which connects the junction-points of the first and last ground-taps and includes the responsive device of the station or stations first specified, and telephonic devices at each station placeable in the metallic circuit.

2. A party-line system comprising a metallic circuit, two or more stations having responsive devices in the metallic circuit, two or more stations each having a ground-tap and a responsive device therein, a source of electrical energy with an optional ground-tap, placeable in the metallic circuit between either station in the metallic circuit and the ground-tap adjacent thereto, and telephonic devices at each station placeable in the metallic circuit.

3. A party-line system comprising a metallic circuit, two or more stations each having responsive devices in the metallic circuit, one or more stations having a ground-tap and a responsive device therein, a source of electrical energy with an optional ground-tap placeable in the metallic circuit between the ground-tap having a responsive device therein and either station in the metallic circuit adjacent thereto, and telephonic devices at each station placeable in the metallic circuit.

4. A system for electrical communication comprising two line conductors, separate stations provided with signals operated by currents of different polarity and connected to the ground and to one line conductor, additional stations provided with signals operated by currents of different polarity and connected in metallic circuit to both line conductors, means for passing electric currents of different polarity over one line conductor to the stations connected thereto and to the ground and for passing currents of different polarity over both line conductors to the additional stations, means at said stations for operating the signals of any of the stations, and switching devices at said stations for controlling the passage and the polarity of the current, substantially as and for the purpose specified.

5. The combination with fixed terminals connected to conductors for the passage of an electric current; of independently-movable switch members provided with terminals for engaging the former terminals and regulating the passage of the current, and an operating-piece mechanically connected to each of said switch members for simultaneously actuating the same, substantially as described.

6. The combination with fixed terminals connected to conductors for the passage of an electric current; of independently-movable switch members provided with terminals for engaging the former terminals and regulating the passage of the current, and a plurality of operating-pieces each connected to each of said switch members for independently actuating the same, substantially as and for the purpose specified.

7. The combination with fixed terminals connected to conductors for the passage of an electric current; of independently movable switch members provided with terminals for engaging the former terminals and regulating the passage of the current, an electrically-operated device normally connected to one of said movable switch members, and a plurality of operating-pieces each connected to each of said switch members for independently actuating the same, substantially as and for the purpose described.

8. The combination with fixed terminals connected to conductors for the passage of an electric current; of independently-movable switch members provided with terminals for engaging the former terminals and regulating the passage of the current, a source of electric energy normally connected to said movable switch members, and a plurality of operating-pieces each connected to each of said switch members for independently actuating the same, substantially as and for the purpose set forth.

9. The combination with a circuit having signals or responsive devices connected thereto, a generator; and terminals connected to the circuit; of switch members movable independently in opposite directions and provided with terminals connected to the poles of the generator and movable into engagement with the former terminals for regulating the passage of the current from the generator to the circuit, and an operating-piece for moving one switch member in one direction and engaging its terminal with one of the former terminals, and for moving the other switch member in the opposite direction and engaging its terminal with another of the former terminals during the engagement of the terminal on the first switch member with said one of the former terminals engaged therewith, substantially as and for the purpose described.

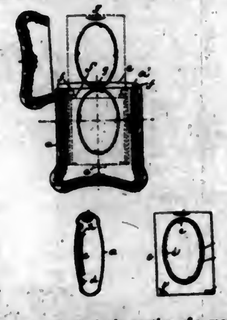
10. The combination with a circuit having signals or responsive devices connected thereto, a generator, and terminals connected to the circuit; of independently-movable switch members provided with terminals connected to the poles of the generator and movable into engagement with the former terminals for regulating the passage of the current from the generator to the circuit, and an operating-piece for moving one switch member in one direction and engaging its terminal with one of the former terminals, and for moving the other switch member a less distance than the first switch member and engaging its terminal with another of the former terminals during the engagement of the terminal on the first switch member with said one of the former terminals engaged therewith, substantially as and for the purpose set forth.

11. The combination with fixed terminals connected to conductors for the passage of an electric current; of independently-movable switch members provided with movable terminals for engaging the former terminals and regulating the passage of the current, a plurality of operating-pieces each connected to said switch members for independently actuating the same, local conductors connected to the former conductors, an electric communicating device, an additional switch member for connecting said device to the local conductors, and a support for the electric communicating device connected to the additional switch member for operating the same, substantially as and for the purpose set forth.

12. The combination with fixed terminals connected to conductors for the passage of an electric current; of independently-movable switch members provided with terminals for engaging the former terminals and regulating the passage of the current, said switch members being formed with apertures arranged out of alinement with each other, and operating-pieces movable into the apertures for actuating said switch members, substantially as and for the purpose described.

13. The combination with fixed terminals connected to conductors for the passage of an electric current; of independently-movable switch members provided with terminals for engaging the former terminals and regulating the passage of the current, said switch members being provided with apertures arranged out of alinement with each other, operating-pieces movable into the apertures for actuating said switch members, and springs for returning said switch members to their normal position, substantially as and for the purpose set forth.

14. The combination with fixed terminals connected to conductors for the passage of an electric current; of independently-movable members provided with terminals for engaging the former terminals and regulating the passage of the current, said members being provided with apertures arranged out of alinement with each other, operating-pieces movable into the apertures for actuating said members, and means for holding said members in their normal position, substantially as and for the purpose specified.



15. The combination with fixed terminals connected to conductors for the passage of an electric current; of reversely-rocking switch members provided with terminals for engaging the former terminals and regulating the passage of the current, said switch members being provided with apertures arranged out of alinement with each other, and reciprocating operating-pieces movable into the apertures for actuating said switch members, substantially as and for the purpose described.

16. The combination with a circuit having signals or responsive devices connected thereto, a generator, and terminals connected to the circuit; of movable switch members provided with terminals connected to the poles of the generator and movable into engagement with the former terminals for regulating the passage of the current from the generator to the circuit, and an operating-piece movable in a plane disposed at an angle with the plane of movement of the switch members, for moving said switch members and engaging their terminals with the former terminals, substantially as and for the purpose set forth.

17. The combination of a subscriber's circuit having responsive devices connected thereto, a generator, a switch, said switch being provided with terminals connected to the circuit, independently-movable switch members provided with terminals connected to the poles of the generator and movable into engagement with the former terminals, a plurality of operating-pieces suitably connected to the switch members for actuating the same, and means for automatically returning the switch members to their normal position, substantially as and for the purpose set forth.

606,621. COMBINED PICTURE-FRAME AND MATCH SAFE OR RECEPTACLE. JOSEPH V. CHESEK, Newark, N. J., assignor to Alling & Co., same place. Filed Oct. 9, 1897. Serial No. 654,695. (No model.)

Claim.—1. The improved picture-frame and match box or receptacle, comprising the box-body open at one end, and provided at said open end with a hinged cover, said body having formed on the inside thereof slideways and stops, a picture-frame arranged within said box-body on said slideways and limited in its sliding movement by said stops, the upper edge of said frame extending to the upper edge of the box-body at the open end and thereat provided with a nail-slot, and the center of said frame being open to receive a picture, substantially as set forth.

2. The combination with the body portion of a match-safe, open at one end and having interior slideways and a hinge-cover to cover said end opening, of a sliding picture-frame arranged within said body and adapted to be withdrawn when the cover is open, the said picture-frame being centrally open and provided with a bezel to receive the picture and hold the picture against the inside of the body portion, where the pictured surface will not be injured by the matches, substantially as set forth.

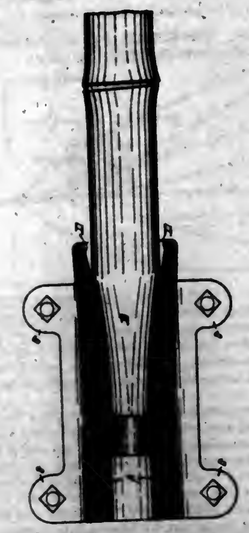
606,622. KITE. JOHN F. COOLEY, Rochester, N. Y., assignor of one-half to William R. Gray, same place. Filed Sept. 4, 1897. Serial No. 650,670. (No model.)

Claim.—1. The combination in a kite of a horizontal wing, having front and rear bars and slack air-resisting material between said bars and a smaller vertical guiding-wing intersecting said horizontal wing at right angles, and a steering device behind said wings.

2. The combination in a kite of two horizontal wings, each having front and rear bars and slack air-resisting material between said bars and a smaller vertical guiding-wing intersecting said horizontal wing at right angles, each system being connected to the other system by a longitudinal spar and the rear system having smaller wings than the other.

3. The combination in a kite of a horizontal wing, having the front edges bowed upwardly at the extremities and the rear edge straight, and the slack air-resisting material between said edges, and a smaller guiding-wing set in a plane intersecting the horizontal wing at right angles, and a steering device behind said wings.

4. The combination in a kite of two horizontal wings, each having the front edge bowed upwardly at the extremities and the rear edge straight, and each having slack air-resisting material between said edges, and a vertical guiding-wing set in a plane intersecting each horizontal member at right angles, and each system being connected to the other by suitable means, as a longitudinal spar.



5. The combination of a main spar having two longitudinal slots in each end, at right angles to each other and horizontal and vertical wings set in said slots and intersecting each other at right angles, and a fastening at the ends of the spar, and means for bowing the front edges of the horizontal wings upwardly at the extremities.

606,623. PROCESS OF REDUCING AND SHAPING BAMBOO RODS. WALTER H. DURAND and WELLS H. PRICHARD, Milwaukee, Wis. Filed Jan. 7, 1897. Serial No. 618,906. (No model.)

Claim.—1. The process of reducing the size of bamboo stalks, consisting in subjecting the stalk to a degree of heat sufficient to soften the silicious coating, and simultaneously compressing the stalk to collapse the cell-walls of the fibers, and cause the silicious coating to fill the interstices and solder the fibers together, substantially as described.

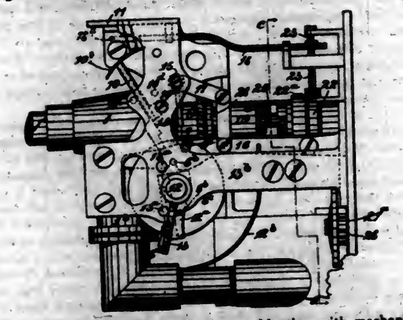
2. The process for reducing bamboo stalks, consisting in forcing the stalks longitudinally into a tapering heated metallic die, substantially as described.

3. The process for reducing bamboo stalks, consisting in forcing the stalks longitudinally into a tapering metallic die, with the latter at a gray heat, whereby the silicious coating of the stalk and its fibers is melted to a plastic state, and the cells collapsed, substantially as described.

606,624. FOOD COMPOUND AND METHOD OF MAKING SAME. WILLIAM GERHARDT, San Antonio, Tex., assignor of one-half to Albert Krumbeck, same place. Filed July 20, 1897. Serial No. 645,550. (No specimens.)

Claim.—1. A dry powdered condiment comprising a dried and ground mixture of chilli-pepper and garlic impregnated with black pepper and origanum; together with powdered flavorants, in substantially the proportions specified.

2. A dry powdered condiment comprising a dried and ground mixture of chilli-pepper and garlic impregnated with black pepper and origanum; and powdered cumin-seed and origanum, in substantially the proportions specified.



3. The herein-described process of preparing a chilli-pepper compound for use as a condiment, the same consisting in saturating a mixture of chilli-pepper hulls and garlic in a solution, in water and alcohol, of black pepper and origanum; then grinding and pressing the moist mass to form thin sheets or strips; then drying said sheets or strips; subsequently grinding the dried sheets or strips; and finally adding cumin and origanum, all being combined substantially as and in the proportions specified.

4. The herein-described process of preparing a chilli-pepper compound for use as a condiment, the same consisting in obtaining a solution of black pepper and origanum, grinding and mixing chilli-pepper and garlic, saturating the mixture with the solution, drying and granulating the saturated mixture, and adding to it powdered flavorants, substantially as and in the proportions specified.

606,625. PREPAYMENT FLUID-METER. HENRY GREER, Preston, England, assignor to himself, and Alexander G. Humphreys and Arthur Graham Glasgow, New York, N. Y. Filed June 28, 1897. Serial No. 642,217. (No model.) Patented in England Aug. 26, 1893, No. 19,067.

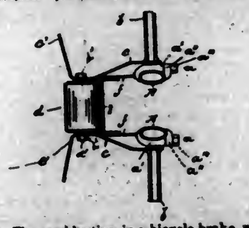
Claim.—1. In a prepayment-meter, the combination with mechanism adapted to be worked by fluid-pressure and mechanism adapted to be worked by hand, of a compound cock adapted to control the flow of fluid through the meter and comprising two plugs one of which is adapted to be turned by the said hand-worked mechanism into a position in which it will open a passage through said cock and the other of which is adapted to be turned by the mechanism worked by the fluid-pressure into a position in which it will close the said passage, the hand-worked mechanism and the corresponding plug being inoperative until a proper coin has been inserted in such apparatus.

2. In a prepayment-meter, a compound cock comprising two hollow plugs arranged concentrically within a barrel or shell and adapted to control the flow of fluid through said meter, mechanism whereby one of said plugs can be operated by hand, coin-operated mechanism controlling said mechanism, mechanism in driving connection with the other of the two plugs and with the measuring apparatus of the meter, and means for preventing the hand-operated plug from overrunning the fluid-operated plug.

3. In a prepayment-meter, the combination with mechanism adapted to be worked by fluid-pressure, and mechanism adapted to be worked by hand but constructed to be inoperative except when a proper coin is inserted therein, of a compound cock comprising a barrel or shell and two hollow plugs arranged concentrically one within the other, shaped to fit one another at the ends and to form an intermediate circumferential chamber between the plugs and a similar chamber between the outer plug and the barrel or shell, each of said plugs being mounted to turn independently of the other and formed with a fluid-passage, and one of them being provided with a closing part adapted by rotation of one plug to close the fluid-passage in the other plug, means connecting one plug with the hand-worked mechanism whereby it can be turned to a position in which it will open a passage through the cock, and means connecting the other plug with the mechanism worked by the fluid-pressure, whereby it is turned to a position to close said passage.

4. A prepayment-meter comprising a meter proper with measuring mechanism, a compound cock adapted to control the flow of fluid through said meter and having two hollow plugs arranged concentrically within a barrel or shell and each provided at its outer end with a driving-wheel, mechanism in driving connection with one of said wheels and its plug and with the measuring apparatus of the meter, a shaft provided with means for engaging and rotating the other wheel and its plug and with a driving disk or plate, a locking device for said driving disk or plate, a rotary coin-holder adapted to support a coin in position to operate said locking device to release said driving disk or plate, and to partly rotate said disk or plate when the same is unlocked, substantially as described.

5. In a prepayment-meter, the combination of a compound cock comprising concentrically-arranged plugs adapted to control the flow of gas through said meter and provided with separate driving-wheels 7 and 9 at their outer ends, driving mechanism in connection with said wheel 9 and with the measuring apparatus of the meter, a shaft provided with means for engaging and driving said wheel 7 and with a plate having locking-pins 6^b, and driving-pins 6^a a rotary shaft with coin-holder 12^a and operating-handle, a locking device comprising a slotted lever adapted to normally engage one or other of said pins 6^b and a lever-arm connected to said slotted lever and arranged in the path of a coin carried by said coin-holder, said driving-pins 6^a being also arranged in the path of said coin, a guard-plate 13^a arranged below said coin-holder, a slotted plate 11, a pivoted coin-chute 10 arranged below said plate and adapted to be brought in line with the slot therein and above the receptacle in the coin-holder when the same is turned upward, and a closing device 10^a adapted to close the slot in said plate when said coin-holder is moved in a direction to unlock said disk, substantially as described and for the purposes specified.



6. In a prepayment-meter, the combination with a compound cock comprising concentrically-arranged plugs adapted to control the flow of gas through said meter, coin-operated mechanism whereby one of said plugs can be turned by hand after the insertion in said mechanism of a proper coin, mechanism whereby the other of said plugs can be turned by the measuring apparatus of the meter, and a plate with a coin-slot, of a tubular extension 19 connected to one of said plugs and formed with a slot 19^a having a part of its length at right angles to said extension, and another part inclined thereto, a spindle fixed to the other plug and connected by a pin-and-slot connection to a sleeve adapted to move lengthwise upon but not to turn about said spindle, a pin fixed to said sleeve and extending through said slot, a collar mounted to slide on said extension and fixed to said

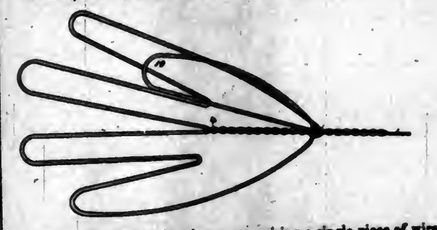
pin, a lever arranged to be operated by said collar, and a bar adapted to be moved by said lever across the slot in said plate, substantially as described and for the purpose specified.

7. A prepayment-meter comprising a meter proper with measuring apparatus, a compound cock having two concentrically-arranged hollow plugs adapted to control the flow of fluid through said meter, actuating mechanism arranged in connection with one of said plugs and worked by pressure of fluid flowing through the meter and two sets of coin-controlled hand-operated apparatus adapted to be independently connected to the other plug, whereby the combined apparatus is adapted for delivering different quantities of fluid in exchange for coins of different values, substantially as described.

8. A prepayment-meter comprising a meter proper with measuring apparatus, a compound cock having two concentrically-arranged hollow plugs adapted to control the flow of fluid through said meter and provided with driving-wheels 7 and 9 respectively, actuating mechanism arranged in driving connection with said wheel 9 and with the measuring apparatus of the meter, two sets of coin-freed mechanism each comprising a coin-chute, a rotary coin-holder arranged below said chute, a shaft provided with a mutilated toothed wheel adapted to gear with said wheel 7 and provided with a slotted or recessed plate and capable of being rotated, when released, through said coin-holder, a locking-lever having a detent or tooth that normally holds said plate with the corresponding mutilated wheel out of engagement with said wheel 7, and a lever-arm arranged in the path of a coin held by the coin-holder and connected with said locking-lever, the mutilated wheel of one coin-freed mechanism having a greater number of teeth than that of the other coin-freed mechanism, a detent arranged to prevent backward rotation of said wheel 7, a pawl that normally prevents said wheel 7 rotating in the opposite direction, and means connected with said pawl and adapted to be operated by each locking-lever so that said pawl will be moved out of engagement with said wheel when either locking-lever is operated to release its corresponding slotted or recessed plate, substantially as described for the purpose specified.

606,626. BICYCLE-BRAKE. JOHN HIGSON, London, England, assignor of one-half to William Evans, Kearny, N. J. Filed Oct. 5, 1896. Serial No. 607,879. (No model.) Patented in England Aug. 14, 1896, No. 15,908.

Claim.—1. The combination, in a bicycle-brake, with the clamps *a*, having foot-supports *b*, which serve as pivots for forwardly-projecting arms *c*, *c*, of said arms *c*, *c*, pivoted upon said foot-supports and extending forward therefrom and at their extremities bent oppositely outward to form a second pair of foot-supports *d' d'*, a brake-shoe arranged between said arms and having bearings thereon, substantially as set forth.



2. The improved brake device for bicycles comprising clamps *a*, *a*, having foot-supports *b*, *b*, extending laterally from said clamps and serving as pivots, arms *c*, *c*, pivoted on said laterally-extending supports bent toward one another and providing bearings for a brake-shoe and forward of said brake-shoe, being bent oppositely away from one another and forming foot-supports *d'*, *d'*, a brake-shoe secured between said arms *c*, *c*, springs *f*, and a connection *g*, for said arms, substantially as set forth.

606,627. BUCKLE. DANIEL B. HIPWELL, London, England, assignor of one-half to Samuel Carter, same place. Filed May 6, 1897. Serial No. 635,910. (No model.) Patented in England July 17, 1895, No. 13,673.

Claim.—In a buckle, the frame provided with two cross-pieces which form integral parts of the frame, the outer one of which is provided with a pocket to receive the front end of the tongue, combined with the forked operating-lever which is pivoted to the frame at its rear end, and is provided with the clips at its outer end, the two outer ends being adapted to be pressed inwardly so as to release the clips; the pivotal rod upon which the lever is pivoted and the tongue which is pivoted to the lever, and which has its free end to catch in the pocket when the buckle is closed, substantially as shown.

606,628. GLOVE-DRIER. JOHN W. HULL, Dayton, Ohio. Filed Nov. 18, 1897. Serial No. 658,518. (No model.)

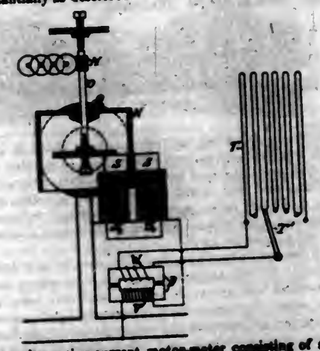
Claim.—1. A drier for gloves, comprising a single piece of wire twisted upon itself to form a handle, the end of said wire on one side of said handle, forming the second and third digits, and the end of said wire on the other side of said handle, forming the fourth and fifth digits, and the thumb; and the extreme ends of said wire being clenched to an intermediate part of said handle, as herein shown and described.

2. As a new article of manufacture, a glove-drier consisting of a single piece of wire twisted to form a handle with a loop in the end and in the intermediate part thereof, and one end of said wire continuing from the twisted portion and forming the second and third digits, and having its extreme end clenched in the loop in the intermediate part of the handle, the other end of said wire continuing from said twisted handle, forming the fourth and fifth digits, and passing through the loop in the intermediate portion of the handle and forming the thumb or first digit, with the extreme end clenched in said loop, as herein shown and described.

606,629. BUCKLE. GEORGE B. LAWRENCE, Creston, Iowa, assignor of one-half to Joseph J. Mumford, same place. Filed Mar. 13, 1897. Serial No. 627,345. (No model.)

Claim.—1. A buckle composed of a fixed casing having an open side and a vertical slot in its rear part and a groove in its front part, a movable plate having a flange to cover said open side and a fastening-stud working in said groove, as set forth.

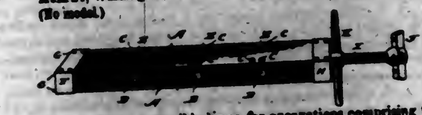
2. A buckle consisting of a fixed casing, having an open side and a central vertical slot in its rear part, and an adjustable and removable plate having a flange to cover said open side, and a retaining-stud working in said vertical slot, as set forth.



3. A buckle composed of a fixed casing having a vertical groove in part of its front and a slot in its rear part, a movable plate having a fastening-pin working in said groove and slot, as set forth.

4. A buckle composed of a fixed casing having a vertical groove in its front and a slot in its rear part respectively and a movable plate having a fastening device working in said groove and slot, as set forth.

606,630. ALTERNATING-CURRENT MOTOR-METER. JULIUS A. MÖLLINGER and KARL KUMBA, Nuremberg, Germany. Filed Dec. 27, 1897. Serial No. 663,457. (No model.)



Claim.—1. An alternating-current motor-meter having a shunt-field consisting of two inductive-resistance coils placed in series with the coil of a choking device, the core or cores of the shunt-field magnet being constructed of thick sheet-iron, cast-iron plate, steel-plate or solid iron, and the core of the choking device of thin subdivided well-insulated sheet-iron, substantially as described.

2. An alternating-current motor meter having a shunt-field consisting of two inductive-resistance coils placed in series with the coil of a choking device, the core or cores of said shunt-field magnet being constructed of thick sheet-iron, cast-iron plate, steel-plate or solid iron, and the core of the choking device consisting of thin subdivided and well-insulated sheet-iron, in combination with a secondary short-circuited coil included in circuit with a variable resistance and having a magnetic core located adjacent to the core of the choking device, substantially as described.

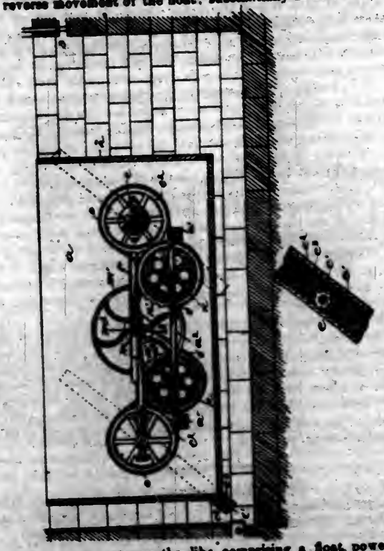
3. An alternating-current motor-meter consisting of a coreless solenoid located in the circuit to be measured, a rotary metallic armature operatively connected with a train of gearing, a shunt-field magnet consisting of two coils, in combination with a choking device having its coil located in series with said coils, together with a secondary short-circuited coil included in circuit with a variable resistance, the cores of the secondary coil and the choking device being located in close proximity to each other and constructed of thin subdivided and well-insulated sheet-iron, while the cores of the shunt-field magnet are constructed of thick sheet-iron, cast-iron plate, steel-plate or solid iron, substantially as described.

606,631. EXTENSION-BRACE FOR EXCAVATIONS. JAMES K. MURPHY, Washington, D. C. Filed Sept. 4, 1897. Serial No. 650,647. (No model.)

Claim.—1. An extensible brace for excavations comprising two wooden side beams separated by pack-blocks at each end and at points intermediate of the ends, said pack-blocks secured in position by bolts and nuts as shown, a shoe F at one end and a casting H, screw I and nut K at the opposite end, substantially as and for the purpose set forth.

2. An excavation-brace comprising two wooden side beams A, A confined at one end by a metal shoe F and at the opposite end by a casting H a screw I and nut K, pack-blocks between the ends of the side timbers, and intermediate pack-blocks B of greater length than the end blocks the blocks being secured by bolts and nuts, whereby a double camber is produced, substantially as and for the purpose set forth.

606,632. WAVE-MOTOR. ROBERT J. ROBERTS and WILLIAM A. NELSON, Salt Lake City, Utah. Filed Sept. 3, 1897. Serial No. 650,512. (No model.)

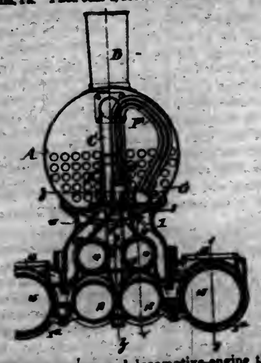


Claim.—1. A wave-motor or the like comprising a stationary rack, a second stationary rack, a float adapted to reciprocate along the racks, a power-shaft upon said float, and a pinion upon said shaft adapted to engage one of the racks in one movement of the float and to engage the other rack in the reverse movement of said float; substantially as described.

2. A wave-motor or the like comprising a frame, a power-shaft upon said frame, a pinion upon said shaft, and an obliquely-set rack adapted to mesh with the pinion for rotating the shaft, one of the members, the rack or the frame, being vertically and horizontally movable along the other; substantially as described.

3. A wave-motor or the like comprising a frame, a power-shaft upon said frame, a pinion upon said shaft, and an obliquely-set double rack with which the pinion is adapted to mesh, one of the members, the rack or the frame having vertical and horizontal reciprocation along the other; substantially as described.

4. A wave-motor or the like comprising a frame, a power-shaft upon said frame, a pinion upon said shaft, and an obliquely-set double rack having the teeth of one rack facing the teeth of the other, the pinion being adapted to engage the racks, and one of the members, the frame or the rack, having vertical and horizontal reciprocation along the other; substantially as described.



5. A wave-motor or the like comprising an obliquely-set stationary double rack, a reciprocating float, a power-shaft upon said float, and a pinion upon said shaft adapted to engage one set of teeth in the rack in one movement of the float, and the other set of teeth in the reverse movement of the float; substantially as described.

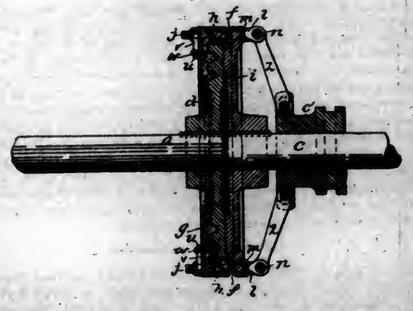
6. A wave-motor or the like comprising a float, power-shafts upon said float, a driving-shaft upon the float between said power-shafts, cross-beams between the side walls of said float, sets of longitudinal beams between the cross-beams, a counter-shaft journaled upon each set of longitudinal beams, connections between the power-shafts and the counter-shafts and between the counter-shafts and the driving-shaft, stationary members at the sides of the float, and means between the stationary members and the power-shafts for rotating the latter in the reciprocation of the float; substantially as described.

7. In a mechanism of the character indicated, an obliquely-set rack, and a pinion adapted to mesh therewith, the teeth of said rack inclining in a direction opposite to the path of travel of the pinion, and the teeth of the pinion being correspondingly oblique to the radii of the pinion; substantially as described.

606,688. COMPOUND LOCOMOTIVE-ENGINE. GEORGE S. STRONG, New York, N. Y., assignor, by mesne assignments, to Clayton E. Platt, Philadelphia, Pa. Filed Jan. 4, 1895. Serial No. 533,574. (No model.)

Claim.—1. In a compound locomotive-engine the combination of two pairs of high and low pressure cylinders, one pair arranged on each side of the engine with pistons and piston-rods working in said cylinders the weight of which is substantially equal in all the cylinders, a main driving-shaft having connected with it four cranks at ninety degrees apart, the cranks for each pair of high and low pressure cylinders set at one hundred and eighty degrees, and coun-

terweights for each crank arranged as nearly as possible in its plane of rotation, and with their center of mass revolving substantially in the same circle as that of the mass of the crank and its attachments.



2. In a compound locomotive-engine the combination of two pairs each consisting of a high and low pressure cylinder and one pair arranged on each side of the engine, cranks for each pair of cylinders set at one hundred and eighty degrees apart on the same axle, a double valve-actuating link P *p* independently-actuated link-slides R *r* one in each part of the double link and the valves of the high and low pressure cylinders connected respectively to the slides *r* and R.

3. In a compound locomotive-engine having two pairs each consisting of a high and low pressure cylinder and one pair secured on each side of the engine, steam-passages leading from the exhaust of the high-pressure cylinders and from the admission of the low-pressure cylinders to the smoke-box, and a reheater connecting said steam-passages and consisting of a series of U-shaped pipes.

4. In a compound locomotive-engine having two pairs each consisting of a high and low pressure cylinder and one pair secured on each side of the engine, steam-passages leading from the exhaust of the high-pressure cylinders and from the admission of the low-pressure cylinders to the smoke-box, cast-iron tube-heads 8 and 10 fastened to the mouths of the steam-passages with ground joints and a series of U-shaped tubes connecting said boxes as described, and forming a reheater.

5. In a compound locomotive-engine having two pairs of high and low pressure cylinders one pair on each side, cranks for each pair of cylinders set at one hundred and eighty degrees to each other, piston-rods I′ I′ connected to said cranks, and to pistons I I² the piston-rod of one or both pistons being hollow and having an enlarged hollow head I² to which the plates of the piston are secured and the material of the two pistons and their rods being so arranged as to be substantially equal in weight.

606,684. FRICTION-CLUTCH. THOMAS H. WORRALL and ALEXANDER LEMPERANCE, Lacouia, N. H.; said Lemperance assignor to said Worrall. Filed Mar. 18, 1898. Serial No. 494,586. (No model.)

Claim.—1. In a friction-clutch, the combination of confronting clutch-disks carried by the rotary members to be connected, a ring bearing against one of said disks on its side opposite the other disk, bolts passing through the latter and the ring, cam-levers pivoted to said bolts, flat bowed springs interposed between the cam-levers and the clutch-disk, and means for operating the cam-levers.

2. In a friction-clutch, the combination of confronting clutch-disks carried by the rotary members to be connected, a ring bearing against one of said disks on its side opposite the other disk, bolts passing through the latter and the ring, nuts on said bolts and bearing against the ring, slotted locking-plates for engaging said nuts, screws supporting said plates by engagement with their slots, and means applied to the bolts and the disks they engage for drawing the disks together.

3. In a friction-clutch, the combination of confronting clutch-disks carried by the rotary members to be connected, a ring bearing against one of said disks on its side opposite the other disk, connections between the latter and the ring, cam-levers applied to said connections, means for actuating said cam-levers, and weighted levers coacting with the cam-levers to counteract centrifugal effect, substantially as described.

4. In a friction-clutch, the combination of confronting clutch-disks carried by the rotary members to be connected, a ring bearing against one of said disks on its side opposite the other disk, bolts passing through the latter and the ring, cam-levers pivoted to said bolts, means for actuating said cam-levers, and weighted levers pivoted to certain of the bolts and coacting with the cam-levers to counteract centrifugal effect, substantially as in the manner described

606,685. ROLLER-BEARING FOR VEHICLES. HENRY TIMKEN and REINHALD HEINEMAN, St. Louis, Mo., assignors of one-half to William R. Timken and Henry H. Timken, same place. Filed Aug. 27, 1897. Serial No. 649,738. (No model.)

Claim.—1. A bearing comprising a sleeve fitting on the axle and movable longitudinally thereon and having an annular rib, rollers around said sleeve provided with a groove fitting over said rib, and a box fitting over said rollers, and means for adjusting said sleeve whereby all of said rollers may be advanced and retracted evenly and in operation are without friction on their ends, substantially as and for the purpose set forth.

2. A bearing comprising a sleeve fitting on the axle and movable longitudinally thereon and having annular ribs, rollers around said sleeve provided with grooves fitting over said ribs, and a box fitting over said rollers, and means for adjusting said sleeve whereby all of said rollers may be advanced and retracted evenly and in operation are without friction on their ends, substantially as and for the purpose set forth.

3. A bearing comprising a sleeve fitting on the axle and movable longitudinally thereon and having an annular rib or ribs, rollers around said sleeve provided with a groove or grooves fitting over said rib or ribs, and a box fitting over said rollers, said axle having its end reduced and threaded, and a nut on said threaded end having an enlarged annular projection adapted to bear against said sleeve, and thin washers interposed between said nut and the shoulder of said axle, whereby all of said rollers may be advanced and retracted evenly and in operation are without friction on their ends, substantially as and for the purpose set forth.

4. A bearing comprising a bearing-cone, conical rollers thereon and a conical box fitting over said rollers, each of said rollers having a plurality of grooves, and ribs on one of the bearing-surfaces to cooperate therewith, substantially as and for the purpose set forth.

5. A vehicle-bearing comprising a conical shell fitting on the axle, conical rollers on said shell and a conical box fixed to the hub of the wheel and bearing on said rollers, said shell having a plurality of annular ribs and said rollers each having a plurality of grooves to cooperate therewith, substantially as and for the purpose set forth.

6. A vehicle-bearing comprising two conical shells fitting on the axle and tapering toward each other, conical rollers around said shells, and conical boxes in the hub of the wheel and fitting around said rollers, each of said rollers having a plurality of grooves therein and one of said bearing-surfaces having ribs projecting into said grooves, substantially as and for the purpose set forth.

7. A vehicle-bearing comprising two relatively-adjustable conical shells fitting on the axle and tapering toward each other, conical rollers around said shells, and conical boxes in the hub of the wheel and fitting around said rollers, said shells having one or more annular ribs and said rollers having grooves to receive said ribs, whereby all of said rollers may be advanced and retracted evenly and in operation are free from friction on their ends, substantially as and for the purpose set forth.

8. A vehicle-bearing comprising two conical shells fitting on the axle and tapering toward each other, conical rollers around said shells, and conical boxes in the hub of the wheel and fitting around said rollers, said shells having a plurality of annular ribs and said rollers having grooves adapted to receive said ribs, and means for adjusting said shells simultaneously, substantially as and for the purpose set forth.

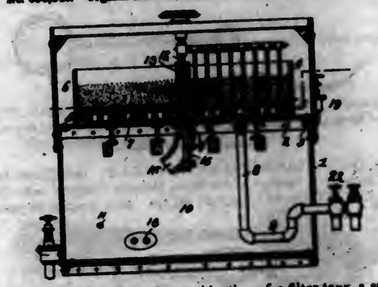
9. A vehicle-bearing comprising two conical shells longitudinally movable on the axle and tapering toward each other, each provided with a groove or grooves to cooperate with said rib or ribs, conical rollers around said shells, and conical boxes fixed to the hub of the wheel, said axle having a shoulder against which one of said shells abuts and having a threaded end and a nut thereon, said nut being arranged to bear against the other shell, whereby, when said nut is tightened, all of said rollers may be advanced evenly and in operation are free from friction on their ends, substantially as and for the purpose set forth.

606,686. ROLLER-BEARING. HENRY TIMKEN and REINHALD HEINEMAN, St. Louis, Mo., assignors of one-half to William R. Timken and Henry H. Timken, same place. Filed Feb. 19, 1898. Serial No. 670,987. (No model.)

Claim.—1. A bearing comprising an inner bearing-piece and an outer bearing-piece and rollers fitting between the bearing-surfaces thereof, one of said pieces having one or more annular ribs thereon and one of said pieces having reversely-turned parts at its ends constituting grooves at said ends, and said rollers having narrow projections at their ends adapted to enter said grooves, substantially as and for the purpose set forth.

2. A bearing comprising an inner bearing-piece and an outer bearing-piece and rollers between the same, one of said pieces having reversely-turned end portions fixed thereon or integral therewith constituting grooves, one of said end portions being notched and said rollers having projecting end portions in said grooves, substantially as and for the purpose set forth.

3. A bearing comprising a conical sleeve with a rib or ribs thereon and having its ends enlarged and provided with grooves in their inner sides, conical rollers bearing on said sleeve and having grooves corresponding with said ribs and having narrow projections at their ends extending into said side grooves, substantially as and for the purpose set forth.



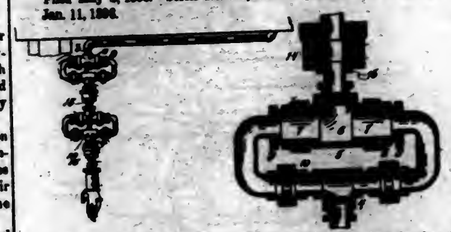
4. A bearing comprising a conical sleeve having its ends enlarged and provided with annular grooves and a notch in the back-turned portion thereof, and conical rollers around said sleeve having projections at their ends within said grooves, substantially as and for the purpose set forth.

5. A bearing comprising a conical sleeve having its ends enlarged and provided with annular grooves therein, conical rollers around said sleeve having projections at their ends within said grooves, a box around said rollers, said sleeve having raised annular surfaces, and smaller conical rollers arranged alternately with the first-mentioned rollers and upon said raised surfaces and clear of the main bearing-surfaces of the box and the sleeve, substantially as and for the purpose set forth.

6. A bearing comprising a conical sleeve, a box, and grooved conical rollers between the same, said sleeve having an annular rib or ribs cooperating with the grooves of the rollers and having grooves formed at its ends for projections at the ends of said rollers, and having raised annular surfaces in said grooves, and smaller conical rollers bearing on said raised surfaces and arranged alternately with said first-mentioned rollers and clear of the box and the main bearing-surface of the sleeve substantially as and for the purpose set forth.

REISSUES.

11,672. FILTER. OSCAR E. JEWELL, Chicago, Ill., assignor to the O. E. Jewell Filter Company, of Illinois. Filed Sept. 7, 1897. Serial No. 650,846. Original No. 563,736, dated Sept. 24, 1896.



Claim.—1. In a filter, the combination of a filter-tank, a subsiding-tank, and a filter-material-holding tank, formed as described, with a central communicating passage or opening between said tanks, an agitator for said filter, the shaft of which passes through said central opening, and projects into said subsiding-chamber, and a pipe-elbow rigidly secured to said shaft, and adapted to be rotated thereby, to give force and direction to the water passing down through said central opening and elbow, for flushing out and removing the sediment from said subsiding-chamber, substantially as set forth.

2. A filter consisting of a filter-tank, a pure-water pipe communicating with the lower portion thereof, a granular filter-bed in said tank, the lower portion of said filter-bed being compacted more closely than the upper portion thereof, means for maintaining a partial vacuum in said filter-bed during filtration, and means for reversing the flow of water through said filter-bed, substantially as described.

3. A filter consisting of a filter-tank, a pure-water pipe communicating with the lower portion thereof, a granular filter-bed in said tank, means for maintaining a partial vacuum in said filter-bed during filtration, and agitators adapted to agitate the upper portion of the bed, substantially as described

11,673. BRAKE-PIPE CONNECTION. CHARLES W. VAUGHAN, Hillsdale, Mich., assignor of one-fourth to John R. Sutton, same place. Filed May 5, 1898. Serial No. 679,571. Original No. 597,049, dated Jan. 11, 1898.

Claim.—1. A connection for fluid pressure brake-pipes, having a plurality of longitudinal link members connected at their contiguous ends by an interposed axially-transverse swivel, and also having other longitudinal link members respectively connected with the first named longitudinal link members by axially-longitudinal swivels, one of the terminal longitudinal link members being provided with a coupling member for engagement with a corresponding coupling member of a cooperating connection, substantially as described.

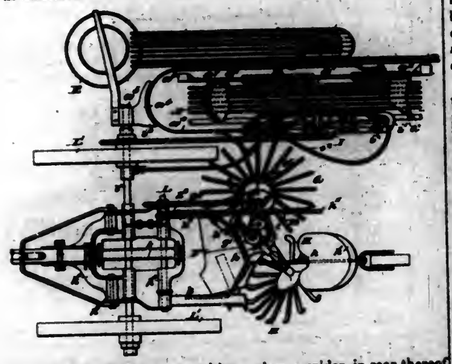
2. A connection for fluid-pressure brake-pipes, having a plurality of links connected at their adjoining ends by an axially-longitudinal swivel each link having longitudinal tubular members connected by an axially-transverse swivel, substantially as specified.

3. A connection for railway fluid-pressure pipes comprising a plurality of links connected at their ends by an axially-longitudinal swivel, each link having longitudinal tubular members connected by an axially-transverse swivel, and a terminal coupling member (for engagement with a complementary coupler member on a cooperating connection) said coupler member being connected to a link member in such a way as to permit a rotary movement of the coupler around its axis.

4. A connection for fluid-pressure brake-pipes, comprising a plurality of links having longitudinal tubular link members, one of which is provided with an axially-transverse barrel or sleeve 6, thimbles, 7, fitted for rotary and axial movement in said barrel or sleeve, and the other link member being provided with branches detachably connected by unions with said thimbles whereby the latter may be dismounted axially and said second link member terminating in an axially-longitudinal swivel and a coupler connected to said swivel.

5. A connection for fluid-pressure brake-pipes, comprising a plurality of links connected by a longitudinal swivel, each link including a transverse swivel, and a coupler at the end of the connection.

6. A connection for fluid-pressure brake-pipes, comprising swivels, each of which comprises a barrel 14 carried by one of the connecting members, a thimble 15 in said barrel and carried by the other connecting member, the thimble being shouldered to engage a partly-closed end of the barrel and being fitted with a packing-nut and a sleeve fitted in the bore of the thimble terminally in contact with the shoulder of the same and having an enlargement to close the opposite end of the barrel to form the connection between the barrel and the member by which it is carried, substantially as described.



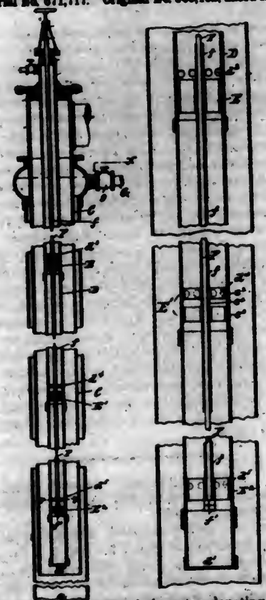
7. In a metallic pipe connection, the combination of link members joined together by swivel-joints, there being two transverse swivels and two longitudinal swivels, the longitudinal swivels being in the line of the length of the pipe, the section being provided at its end with a coupler.

11,674. POTATO-HARVESTER. JOSEPH H. COCHER, West Devonport, Tasmania. Filed Feb. 19, 1898. Serial No. 670,966. Original No. 583,511, dated Jun. 26, 1896.

Claim.—1. In a potato-harvester, a frame, a plowshare supported thereby, and a pair of spiders for collecting the potatoes, said spiders being located in rear of the share and having their meeting edges substantially at the center line of the plow, the said spiders inclining upwardly and outwardly from each other toward opposite sides of the machine, substantially as described.

2. In combination in a potato-harvester, a frame, a plow carried thereby, a spider having its inner edge back of the plow and arranged on a shaft inclined in a plane transversely of the machine, a second spider having its inner edge adjacent to the edge of the first spider, the said second spider inclining outwardly and backwardly and being on a shaft inclined in a plane extending at an angle to the transverse plane of the first shaft, the said spiders being adapted

to collect the potatoes dug by the plow the share of which presents a broad digging edge extending in front of the spiders, substantially as described.



3. A potato-digger comprising a plow, a spider in rear thereof adapted to receive the potatoes from the plow and a series of curved arms on the hub of said spider for separating the tops from the tubers, substantially as described.

4. In a potato harvester an elevator, a plow, a wheel, spiders G, H, delivering said potatoes to said wheel, and a third spider I located in the entrance to said elevator-wheel, substantially as described.

5. In a potato-harvester, a plow, an elevator-wheel, spiders delivering the potatoes to the said wheel, a trough to receive the potatoes and a third spider I within the said wheel, substantially as described.

11,675. APPARATUS FOR USING COMPRESSED AIR TO ELEVATE WATER. SILAS W. TITUS, New York, N. Y., assignor to the Pneumatic Engineering Company, of West Virginia. Filed Feb 25, 1898. Serial No. 671,717. Original No. 568,102, dated Aug. 18, 1896.

Claim.—1. In a compressed air water-elevating apparatus, the combination with a water-eduction tube, of a compressed-air-supply pipe provided with lateral apertures at several different points throughout its height, whereby air may be injected into said eduction-tube at different depths, together with a series of cut-offs or valves adapted to open and close said apertures at one or more of said different points, and means for operating said cut-offs or valves; substantially as and for the purpose set forth.

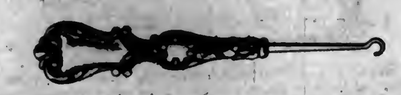
2. In a compressed-air water-elevating apparatus, the combination with a water-eduction tube, of a compressed-air-supply pipe within said tube and provided with lateral apertures at several different points throughout its height, said apertures at each such point being on opposite sides of said air pipe, and a series of hollow cylindrical cut-offs within said air-pipe adapted to open and close said apertures at one or more of said different points, and means for operating said cut-offs; substantially as and for the purpose set forth.

3. In a compressed-air, water-elevating apparatus, the combination with a water-eduction tube, of a compressed-air-supply pipe within said tube and provided with lateral apertures at several different points throughout its height, and a series of cut offs or valves, within said air-pipe adapted to successively open said apertures in said air-pipe, beginning at the point nearest the discharge end of said inclosing eduction-tube, and, while each of said apertures is thus open to maintain the other apertures closed, and means for operating said cut-offs or valves; substantially as and for the purpose set forth.

4. In a compressed-air water-elevating apparatus, the combination with a water-eduction tube, of a compressed-air-supply pipe within said tube and provided with lateral apertures at several different points throughout its height, and a series of cut-offs, or valves, within said pipe, composed of hollow cylinders, the uppermost of which is of a length to maintain the uppermost apertures closed while the lower apertures are open, the lowermost of which is of a length to maintain the lowermost apertures closed until the apertures above are closed, and the intermediate of which is formed of sections adapted to successively close the intermediate apertures, and means for operating said cut-offs or valves; substantially as and for the purpose set forth.

DESIGNS.

28,917. STUD MEMBER FOR DETACHABLE FASTENERS. GEORGE H. ADAMS, New Britain, Conn. Filed May 27, 1898. Serial No. 681,068. Term of patent 3½ years.



Claim.—The design for a stud member of a detachable fastener herein shown and described.

28,918. COLLAR-BUTTONER. CHARLES PATRICK MULHERIN, Augusta, Ga. Filed June 3, 1898. Serial No. 682,494. Term of patent 14 years.

Claim.—The design for a buttoner herein shown and described.

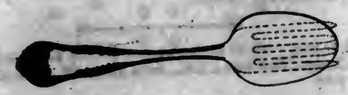
28,919. HANDLE FOR BUTTON-HOOKS, &c. LOUIS KRAHL, Providence, R. I., assignor to the Waite, Thrasher Company, same place. Filed May 23, 1898. Serial No. 681,519. Term of patent 3½ years.

Claim.—The design for the handle of a button-hook or other similar article as herein shown and described.

28,920. HANDLE FOR BUTTON-HOOKS, &c. LOUIS KRAHL, Providence, R. I., assignor to the Waite, Thrasher Company, same place. Filed Mar. 23, 1898. Serial No. 681,520. Term of patent 3½ years.

Claim.—The design for a handle for a button-hook or similar article as herein shown and described.

28,921. HANDLE FOR BUTTON-HOOKS, &c. BENJAMIN CREED and CHARLES E. COREY, Providence, R. I., assignors to the Waite, Thrasher Company, same place. Filed Mar. 18, 1898. Serial No. 681,066. Term of patent 3½ years.



Claim.—The design for a handle for a button-hook or similar article, as herein shown and described.

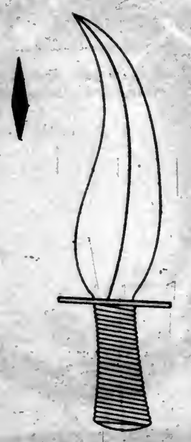
28,922. BACK FOR BRUSHES, MIRRORS, OR SIMILAR ARTICLES. JOSEPH FR. LAUER, Attleborough, Mass., assignor to the James R. Blake & Company, same place. Filed June 3, 1898. Serial No. 682,493. Term of patent 7 years.

Claim.—The design for the back of a brush, mirror or similar article herein shown and described.

28,923. HANDLE FOR SPOONS, FORKS, &c. GUSTAV STRONHAKER, Wallingford, Conn., assignor to the Watrous Manufacturing Company, same place. Filed May 23, 1898. Serial No. 681,512. Term of patent 7 years.

Claim.—The design for a handle for spoons, forks or similar articles as herein shown and described.

28,924. SPOON, FORK, OR SIMILAR ARTICLE. GEORGE P. TILTON, Newburyport, Mass. Filed May 20, 1898. Serial No. 681,268. Term of patent 7 years.

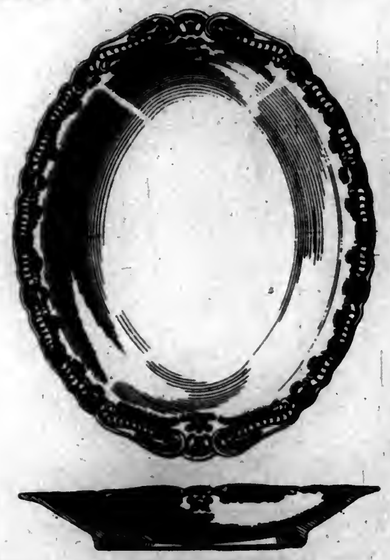


Claim.—1. In the design for a spoon, fork or similar article, the obverse as herein shown and described.

2. In the design for a spoon, fork or similar article, the reverse as herein shown and described.

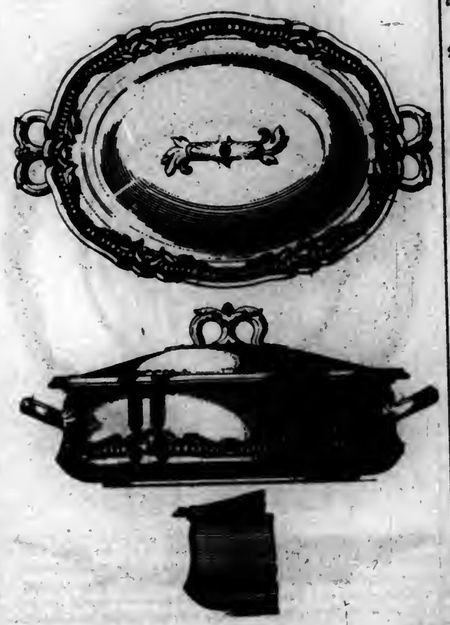
3. The design for a spoon, fork, or similar article, as herein shown and described.

28,925. KNIFE. BYRON R. PECK, Bridgeport, Conn. Filed May 18, 1898. Serial No. 681,085. Term of patent 3½ years.



Claim.—The design for a knife, substantially as shown in the accompanying drawings.

28,926. PLATE OR DISH. CHARLES EDWARD HAVILAND, Limoges, France. Filed June 1, 1898. Serial No. 682,301. Term of patent 7 years.



Claim.—The design for a plate or dish or similar article, substantially as shown and described.

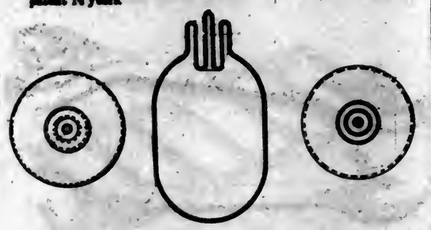
28,927. DISH. CHARLES EDWARD HAVILAND, Limoges, France. Filed June 1, 1898. Serial No. 682,302. Term of patent 7 years.

Claim.—The design for a dish or similar article, substantially as shown and described.

28,928. COVER-DISH. CHARLES EDWARD HAVILAND, Limoges, France. Filed June 1, 1898. Serial No. 682,305. Term of patent 7 years.

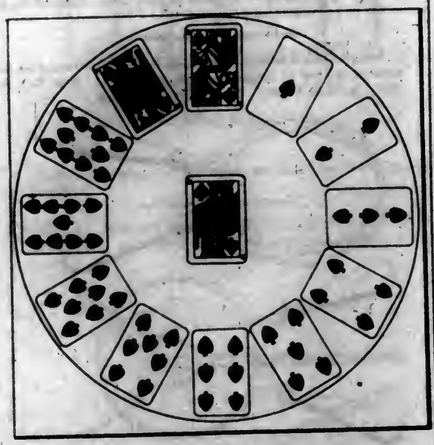
Claim.—The design for a cover-dish or similar article, substantially as shown and described.

28,929. COVER-DISH. CHARLES EDWARD HAVILAND, Limoges, France. Filed June 1, 1898. Serial No. 682,306. Term of patent 7 years.



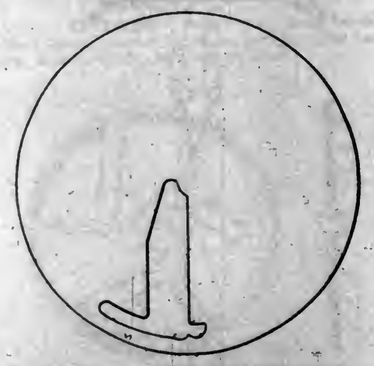
Claim.—The design for a cover-dish or similar article, substantially as shown and described.

28,930. CUP OR BOWL. CHARLES EDWARD HAVILAND, Limoges, France. Filed June 1, 1898. Serial No. 682,308. Term of patent 7 years.



Claim.—The design for a cup or bowl or similar article, substantially as shown and described.

28,931. INCANDESCENT-LAMP BULB. JOHN THOMAS LISTER, Cleveland, Ohio. Filed Apr. 28, 1898. Serial No. 679,148. Term of patent 14 years.

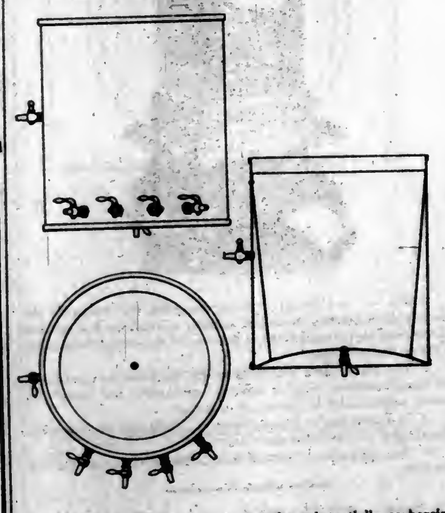


Claim.—The design for an incandescent-lamp bulb, as herein shown and described.

28,932. CLOCK-DIAL. CHARLES GOSSLAW, Tryon, N. C. Filed Apr. 16, 1898. Serial No. 677,895. Term of patent 3½ years.

Claim.—The design for a dial for a clock, substantially as herein shown and described.

28,933. INDICATOR FACE-PLATE. ORANGE O. OHAS, Dayton, Ohio. Filed Sept. 13, 1897. Serial No. 651,549. Term of patent 14 years.



Claim.—The design for an indicator face-plate, substantially as herein shown and described.

28,934. DENTAL SEPARATOR. HENRY W. GILLETT, Newport, R. I. Filed May 28, 1897. Serial No. 638,631. Term of patent 14 years.

Claim.—The design for a dental separator, as herein shown and described.

28,935. BEER-COOLER. EMIL STAHL, Hoboken, N. J. Filed June 2, 1898. Serial No. 682,603. Term of patent 7 years.

Claim.—The design for a beer-cooler substantially as herein shown and described.

28,936. STOVE. ALPHEUS M. BLAKESLEY, Rock Island, Ill. Filed Apr. 4, 1898. Serial No. 676,470. Term of patent 3½ years.

Claim.—1. The design for a stove herein described and shown.

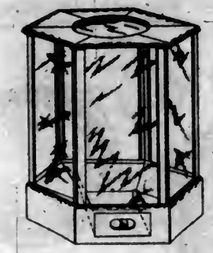
2. In the design for a stove the design for a base herein described and shown.

3. In the design for a stove the design for a skirt herein described and shown.

4. In the design for a stove the design for a top herein described and shown.

5. In the design for a stove the design of the door D herein described and shown.

28,937. HEATING-STOVE. EDWARD G. GERMER, Erie, Pa. Filed May 24, 1898. Serial No. 681,643. Term of patent 7 years.



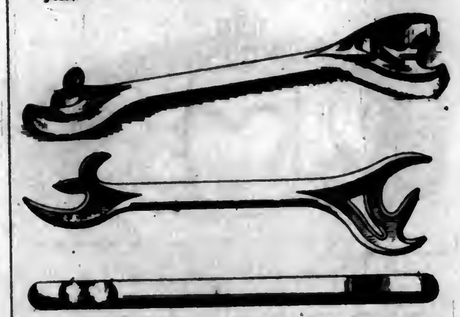
Claim.—1. In a design for a heating-stove, the design for the downwardly-depending curtain or skirting around the fire-pot and the foot-rails supported thereby at the sides of the stove, substantially as shown and described.

2. In a design for a heating-stove, the design of the stove-body, and the ornamental ledge or molding surrounding the lower part thereof, substantially as shown and described.

3. In a design for a heating-stove, the design for the stove-top, substantially as shown and described.

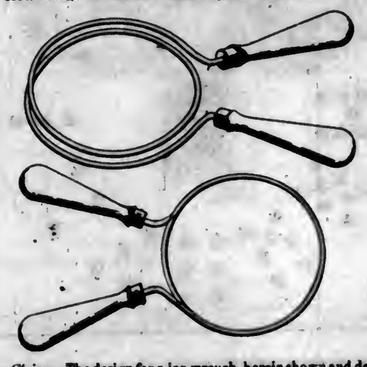
4. The design for a heating-stove, substantially as shown and described.

28,938. GROCER'S CABINET. WILLIAM E. HEWIT, David City, Nebr. Filed May 24, 1898. Serial No. 681,644. Term of patent 7 years.



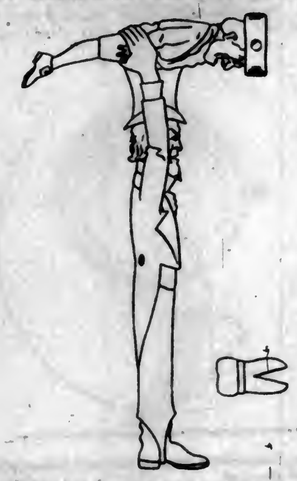
Claim.—The design for a grocer's cabinet substantially as herein shown and described.

28,939. PUNCH. JOHN H. HUMER, St. Louis, Mo. Filed May 21, 1898. Serial No. 681,380. Term of patent 7 years.



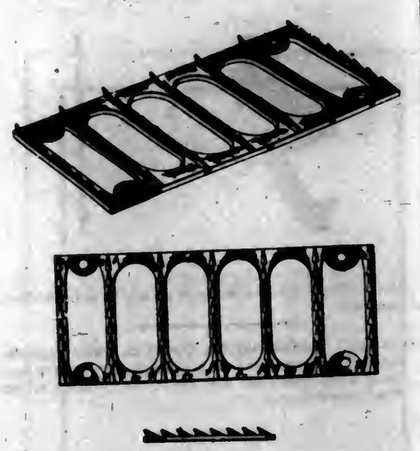
Claim.—The design for a punch, substantially as herein shown and described.

28,940. STOVE-LID AND PAN LIFTER. IRA O. MILLER, Topeka, Kans. Filed May 28, 1898. Serial No. 682,070. Term of patent 3½ years.



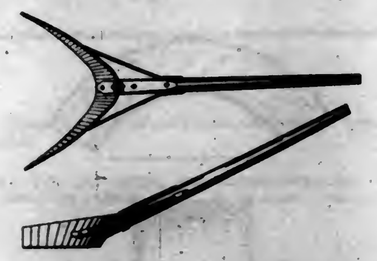
Claim.—The design for a stove-lid and pan lifter, substantially as herein shown and described.

28,941. JAR-WRENCH. ADOLPH A. FAIST, Des Moines, Iowa, assignor of one-half to Nathan B. Lentz, same place. Filed Sept. 29, 1897. Serial No. 653,531. Term of patent 14 years.



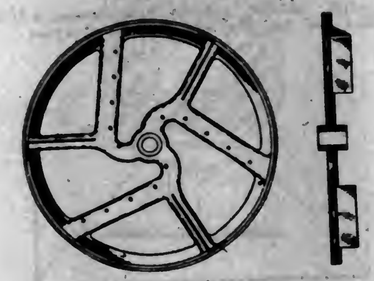
Claim.—The design for a jar-wrench, herein shown and described.

28,942. HAMMER. AUGUST W. HUTAF, Hoboken, N. J. Filed May 6, 1898. Serial No. 679,963. Term of patent 3½ years.



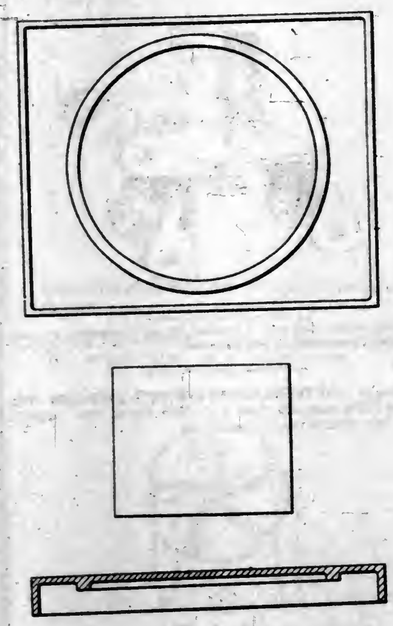
Claim.—The design for a hammer herein shown and described.

28,943. CARPET-STRETCHER PLATE. JOHN F. MARTIN, Corunna, and JULIUS W. CHEVE, Coldwater, Mich. Filed May 31, 1898. Serial No. 682,215. Term of patent 14 years.



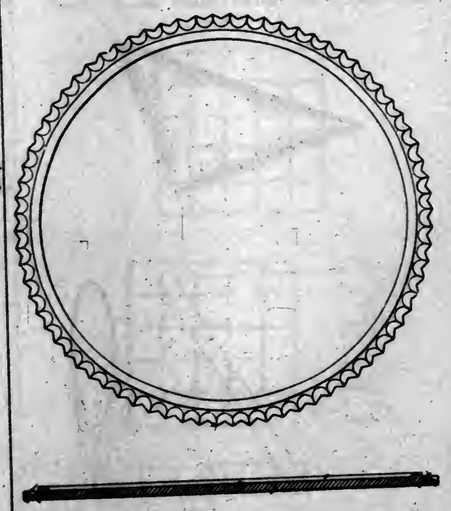
Claim.—The design for the carpet-stretcher plate herein shown and described.

28,944. DUST-SCRAPER. DARIUS FAY, Binghamton, N. Y. Filed Mar. 5, 1898. Serial No. 672,796. Term of patent 7 years.



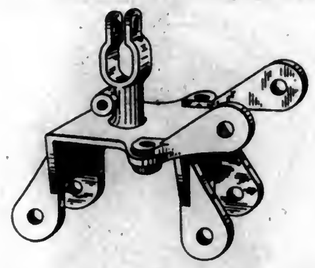
Claim.—The design for a dust-scraper, substantially as herein described and shown.

28,945. KNIFE-WHEEL. OSCAR E. BRAY, Toronto, Canada, assignor of one-half to Edward G. E. Pfalzer, same place. Filed Feb. 14, 1898. Serial No. 670,332. Term of patent 7 years.



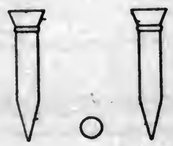
Claim.—The design for a knife-wheel, as herein shown and described.

28,946. SCALE BASE-PLATE. ORANGE O. OSIAS, Dayton, Ohio. Filed June 6, 1898. Serial No. 682,788. Term of patent 14 years.



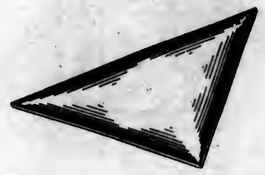
Claim.—The design for a scale base-plate, substantially as shown and described.

28,947. SCALE BASE-PLATE. ORANGE O. OSIAS, Dayton, Ohio. Filed June 6, 1898. Serial No. 682,789. Term of patent 14 years.

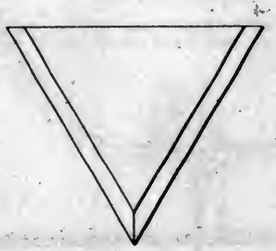


Claim.—The design for a scale base-plate substantially as herein shown and described.

28,948. BRACKET FOR PLANTERS. GEORGE W. WOOLEY, St. Paul, Minn. Filed Jan. 10, 1898. Serial No. 666,261. Term of patent 7 years.



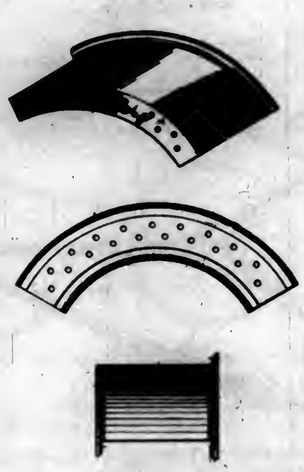
Claim.—The design for a bracket for use in planters, &c., substantially as herein shown and described.



28,949. CAP FOR EXPLODING DYNAMITE-CARTRIDGES. WILLIAM P. FERGUSON, New York, N. Y. Filed May 23, 1898. Serial No. 681,513. Term of patent 14 years.

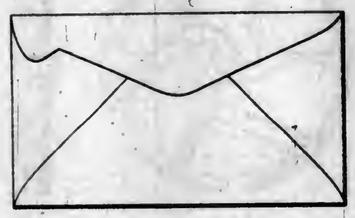
Claim.—The design for a cap for exploding dynamite-cartridges, substantially as herein shown and described.

28,950. THERMOSTATIC CHAMBER. JAMES K. GILMORE, Des Moines, Iowa, assignor to the Des Moines Incubator Company, same place. Filed Feb. 17, 1898. Serial No. 670,711. Term of patent 7 years.



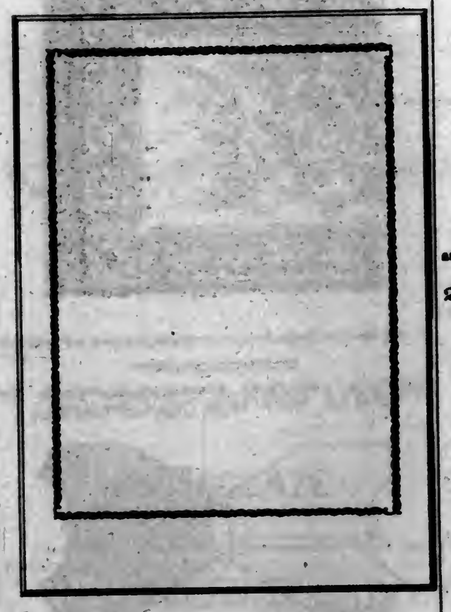
Claim.—The design for a thermostatic chamber or cell, substantially as herein shown and described.

28,951. WASHER FOR NUT-LOCKS. EDWARD THOMAS CORNER, Illiopolis, Ill. Filed Feb. 3, 1898. Serial No. 669,095. Term of patent 14 years.



Claim.—The design for a washer for a nut-lock, as herein shown and described.

28,952. CHANNEL-BAR FOR TUNNEL OR SIMILAR CASINGS. ALBERT WELLS BUSH, New York, N. Y., assignor of one-half to David Leavitt Hough, same place. Filed Apr. 14, 1898. Serial No. 677,690. Term of patent 14 years.

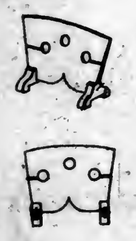


Claim.—The design for a channel-bar for tunnel and similar casings, substantially as herein shown and described.

28,953. ENVELOP. ROBERT M. JOHNSON, Hainesport, N. J. Filed May 3, 1898. Serial No. 679,632. Term of patent 14 years.

Claim.—The design for an envelop herein shown and described.

28,954. CARD-MOUNT. JOHN P. GREENE, Philadelphia, Pa., assignor to the A. H. Collins Manufacturing Company, same place. Filed May 17, 1898. Serial No. 680,980. Term of patent 7 years.

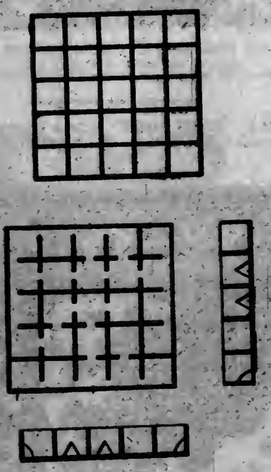


Claim.—The design for a card-mount, substantially as shown and described.

28,955. SIGN-LETTER. FRANK HAMMER, Columbus, Ohio. Filed Mar. 5, 1898. Serial No. 672,751. Term of patent 14 years.

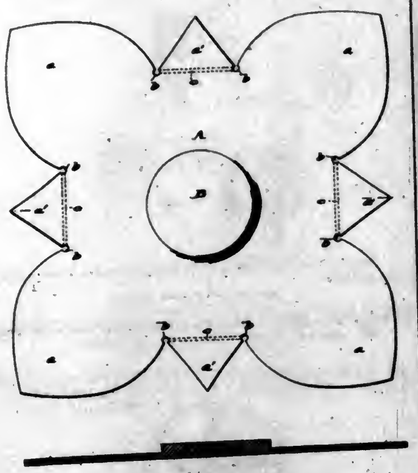
Claim.—The design for a sign-letter, substantially as herein shown and described.

28,956. VIOLIN OR BANJO BRIDGE. JOHN REHL, French Camp, Miss. Filed May 18, 1898. Serial No. 681,087. Term of patent 14 years.



Claim.—The design for a violin or banjo bridge as herein shown and described.

28,957. CONFECTION. JOSEPH SIMON, Chicago, Ill. Filed Jan. 31, 1898. Serial No. 668,661. Term of patent 3½ years.

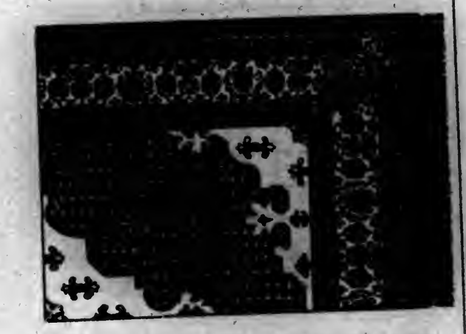


Claim.—The design for a confection, substantially as herein shown and described.

28,958. PUZZLE-BOX. JOSEPH H. MCCARVILLE, Armah, Iowa. Filed May 24, 1898. Serial No. 681,845. Term of patent 3½ years.

Claim.—The design for a puzzle-box, as herein shown and described.

28,959. DUPLICATE-WHIST BOARD. FRANK B. CRANE and EDGAR P. REMFIELD, New York, N. Y. Filed Jan. 11, 1898. Serial No. 666,349. Term of patent 14 years.

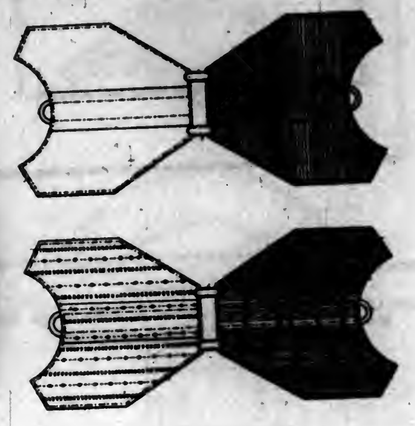


Claim.—The design for a duplicate whist board, as herein shown and described.

28,960. WOVEN FABRIC. WILLIAM T. SMITH, Philadelphia, Pa. Filed June 1, 1898. Serial No. 682,998. Term of patent 3½ years.

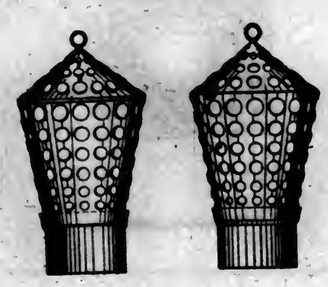
Claim.—The design for a woven fabric, as shown and described.

28,961. WOVEN FABRIC. WILLIAM T. SMITH, Philadelphia, Pa. Filed June 1, 1898. Serial No. 682,999. Term of patent 3½ years.



Claim.—The design for a woven fabric, as shown and described.

28,962. WOVEN FABRIC. WILLIAM T. SMITH, Philadelphia, Pa. Filed June 1, 1898. Serial No. 683,000. Term of patent 3½ years.



Claim.—The design for a woven fabric, as shown and described.

28,968. SHIRT-FRONT. HOWARD B. GOSSARD, Altoona, Pa. Filed July 20, 1897. Serial No. 645,266. Term of patent 3½ years.

Claim.—The design for a shirt-front herein shown and described.

28,964. STRAINER FOR CATCH-BASINS. HENRY H. WIEBER, Kingston, N. Y. Filed June 3, 1898. Serial No. 682,486. Term of patent 7 years.

Claim.—The design for a strainer for catch-basins, as herein shown and described.

TRADE-MARKS

REGISTERED JUNE 28, 1898.

81,739. AUTOHARPS, CITHERNS, AND GUITARS. FERDINAND STRAUSS, New York, N. Y. Filed May 6, 1898.

QUEEN

Essential feature.—The word "QUEEN." Used since May 2, 1898.

81,740. WRITING-PAPER AND ENVELOPES. S. & W. M. CRANE, Dalton, Mass. Filed Apr. 14, 1898.

UNDERGLAZE

Essential feature.—The word "UNDERGLAZE." Used since March 1, 1898.

81,741. CERTAIN NAMED DRY GOODS. Dreyer & Pink, New York, N. Y. Filed Mar. 4, 1898.

DARBFORDS

Essential feature.—The word "DARBFORDS." Used since January 30, 1898.

81,742. CORSETS. Bell, Schwenkens, New York, N. Y. Filed Apr. 27, 1898.

MODESCA

Essential feature.—The word "MODESCA." Used since November 15, 1897.

81,743. CORSETS. Bell, Schwenkens, New York, N. Y. Filed Apr. 27, 1898.

CLYTIE

Essential feature.—The word "CLYTIE." Used since September 1, 1897.

81,744. BOOTS AND SHOES. HURLEY & CASSIDAY, Lynn, Mass. Filed May 10, 1898.

TRIONFA.

Essential feature.—The word "TRIONFA." Used since April 12, 1898.

81,745. CERTAIN NAMED SHOE-LEATHER. HERMAN HEMLAFT LEATHER COMPANY, Milwaukee, Wis., and Boston, Mass. Filed Mar. 11, 1898.

Wisco.

Essential feature.—The word "WISCO." Used since October 1897.

81,746. CHROME-TANNED SHOE-LEATHER IN BLACK. HERMAN HEMLAFT LEATHER COMPANY, Milwaukee, Wis., and Boston, Mass. Filed Mar. 11, 1898.

Dargai.

Essential feature.—The word "DARGAI." Used since October, 1897.

81,747. BRISTLES, WOOL, FUR, HAIR, SKINS, AND HIDES. E. BRAUN & Co., New York, N. Y. Filed Apr. 18, 1898.

Essential feature.—The representation of a butterfly. Used since November, 1895.

81,748. SOFT CLEANERS FOR WALL-PAPER. JAMES DUNCOMB, Cleveland, Ohio. Filed May 9, 1898.

PAPERENE.

Essential feature.—The word "PAPERENE." Used since March 1, 1897.

81,749. LEASHES FOR LOOM-HEDDLES. NICOLAS CHAIZE and JACQUES CHAIZE, St. Etienne, France. Filed Mar. 29, 1898.

Essential feature.—The representation of two eyes or mails for the leash of a loom-heddle, each eye oblong in shape lengthwise of the leash and each colored so as to contrast with the remainder of the leash, one eye being colored red and the other blue. Used since 1883.

81,750. EXTRACTS IN TABLET OR SOLID FORM AND TINCTURES AND SPIRITS IN LIQUID FORM. ADOL. MEISSLER, Philadelphia, Pa. Filed Mar. 28, 1898.

BONDONA

Essential feature.—The word "BONDONA." Used since September 17, 1896.

81,751. CERTAIN NAMED BREWERS' SUPPLIES. RUDOLPH SCHNEIDER, New York, N. Y. Filed Apr. 20, 1898.

Essential feature.—The representation of a helmet surmounting breast and shoulder plates inclosed in a band bearing the abbreviation and words "RUD. SCHNEIDER, NEW YORK." Used since March 15, 1898.

81,752. CONDENSED MILK, CONDENSED COFFEE, CONDENSED COCOA, AND COFFEE EXTRACT. NEW YORK CONDENSED MILK COMPANY, New York, N. Y. Filed Mar. 10, 1898.

PIONEER

Essential feature.—The word "PIONEER." Used since February, 1898.

81,753. MINERAL WATERS. WHITE ROCK MINERAL SPRING COMPANY, Waukesha, Wis. Filed Mar. 16, 1898.

Essential feature.—The representation of a woman kneeling on a rock, the words "WHITE ROCK" appearing on the rock, and the words "WHITE ROCK OZONATE LITHIA." Used since October 16, 1893.

81,754. REMEDY FOR SKIN AND BLOOD DISORDERS. SULPHUR COMPANY, Chicago, Ill. Filed Oct. 26, 1897.

Essential feature.—The representation of a half-figure of a woman in the act of pouring drops or particles from a receptacle. Used since November, 1893.

81,755. MEDICAL COMPOUND FOR THE CURE OF RHEUMATISM. WALTER R. ELLIS, Maywood, N. J. Filed Feb. 7, 1898.

CIMIC

Essential feature.—The word "CIMIC." Used since October 1, 1897.

81,756. PILE REMEDY. CHARLES L. DOSS, Malvern, Ark. Filed Apr. 22, 1898.

Essential feature.—The representation of a cross, the two bars standing exactly at right angles to each other, having in the center of the cross a triangle, one apex of the triangle standing vertical to the base, in the left-hand end of the horizontal bar the letters "C. L.," in the center of the triangle "D., S.," and in the right-hand end of the horizontal bar "P. R." Used since December 1, 1897.

81,757. REMEDY FOR HOG CHOLERA. CARL BILLSTEIN, Ottoville, Ohio. Filed May 11, 1898.

Carl Billstein

Essential feature.—The signature of the registrant. Used since September 15, 1893.

81,758. DISINFECTANTS, GERMICIDES, OR DEODORIZING COMPOUNDS. HENRY S. BLACKMORE, Mount Vernon, N. Y., and Philadelphia, Pa. Filed Apr. 27, 1898.

SULPHOZYL.

Essential feature.—The word "SULPHOZYL." Used since April 10, 1898.

81,759. ANTISEPTIC MEDICATED SOAP. CHARLES I. HOOD, Lowell, Mass. Filed Feb. 11, 1898.

HOOD'S Medicated Z SOAP

Essential feature.—The words "HOOD'S MEDICATED SOAP" on a "Z" formation in white upon a deep-blue ground, in which "Z" the word "MEDICATED," in blue type, is printed in the bar sinister and the words "HOOD'S" and "SOAP," in heavier blue type, in the upper and lower horizontal bars, respectively. Used since August 11, 1897.

81,760. PORTLAND CEMENT. THE FRANK H. MOSES COMPANY, Newark, N. J., and New York, N. Y. Filed May 3, 1898.

CHIEFTAIN

Essential feature.—The word "CHIEFTAIN." Used since April 27, 1898.

81,761. PORTLAND CEMENT. THE FRANK H. MOSES COMPANY, Newark, N. J., and New York, N. Y. Filed May 3, 1898.

FEARLESS

Essential feature.—The word "FEARLESS." Used since April 27, 1898.

81,762. LUMBER. THE H. L. BERRY COMPANY, Whitfield, Fla. Filed Mar. 19, 1898.

B

Essential feature.—An octagonal figure formed of straight lines and the capital letter "B." Used since December 1, 1894.

81,763. TYPE-WRITING MACHINES. AMERICAN WRITING MACHINE COMPANY, Ilion and New York, N. Y. Filed Apr. 27, 1898.

Century

Essential feature.—The word "CENTURY." Used since October, 1897.

81,764. TYPE-WRITING MACHINES. COMMERCIAL TYPEWRITER COMPANY, New York, N. Y. Filed May 12, 1898.

EAGLE

Essential feature.—The word "EAGLE." Used since November, 1897.

81,765. PAPER-FILES, BOOKS, CABINETS, AND OTHER RECEPTACLES FOR PAPERS AND DOCUMENTS. Brown & Bigelow, Incorporated, Chicago, Ill. Filed Apr. 11, 1898.

Essential feature.—A symbolic device of substantially circular form, wherein are represented the sun and the eight planets—Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune—of the solar system, three comets, and numerous stars, said device having across its face a scroll differing in color to that of the design in chief. Used since April 1, 1897.

81,766. FLOUR-SIFTERS. The National Manufacturing Company, Worcester, Mass. Filed May 12, 1898.

VICTOR

Essential feature.—The word "Victor." Used since September, 1864.

81,767. CERTAIN NAMED BICYCLE-TIRES. Clark Cycle Tire Company, Boston, Mass. Filed Mar. 15, 1898.

Essential feature.—The representation of a foreground or landscape, with a background of sky and clouds, a game-cock standing erect against the background, and the words above the game-cock, "The Corker," all surrounded by a frame in shape like a cross-section of a bicycle-tire, in which the tread portion appears as separated from the air-tube portion. Used since September 1, 1897.

81,768. SCYTHES, GRASS-HOOKS, AND HAY-KNIVES. North Wayne Tool Company, North Wayne and Hallowell, Me. Filed Jan. 10, 1898.

LITTLE GIANT

Essential feature.—The words "Little Giant." Used since March, 1897.

THE NORRIS PETERS CO.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

AUSTIN v. WINSLOW.

Decided April 9, 1898.

1. INTERFERENCE—TESTIMONY—COMPETENCY OF INVENTOR TO TESTIFY IN HIS OWN BEHALF.

Winslow took no testimony to prove his case, but rested on his record date. Austin testified that he disclosed the invention to Winslow, who was then in his employ and who made no claim to the invention. Austin's testimony is uncorroborated. *Held* that in interference proceedings where the fact is one that is not solely within the personal knowledge of the party to the interference his testimony cannot be ignored simply because it is uncorroborated and that Austin is a competent witness to testify as to a claimed disclosure of the subject-matter of the interference to his adversary.

2. SAME—SAME—SAME—BURDEN OF PROOF.

Held, further, that when Austin testified that he had disclosed the invention to Winslow the burden of proof was shifted and Winslow could no longer safely rely upon his record date. Where a claimed fact must be equally within the knowledge of two parties and one asserts it and the other fails to deny it, the latter cannot complain if the asserted fact is found by the tribunal called upon to pass on it to be true.

3. SAME—THE QUESTION TO BE CONSIDERED IN INTERFERENCE PROCEEDINGS—ESTOPPEL—REISSUE.

Where Austin contended that Winslow is estopped from asserting his right to the subject-matter of the issue, as claims covering the matter were presented in an original application and after rejection on references were canceled, *Held* that while it is well settled that claims contained in the reissue patent which were asserted in the original application, but were rejected and canceled, will not be sustained by the courts, and therefore should not be allowed by the Office, yet this question is one between the public and the applicant making the claims. This question of estoppel has no bearing upon the question of priority, the question for consideration in an interference proceeding, and therefore will not be considered here. (*Hoeveler et al.* v. *Verner et al.*, 43 MS. Dec., 444, 448.)

APPEAL from Examiners-in-Chief.

PLATFORM-SCALES.

Application of Stephen J. Austin filed January 12, 1895, No. 534,608. Application (reissue) of Marion H. Winslow filed June 24, 1895, No. 553,234.

Messrs. Knight Brothers for Austin.

Mr. W. S. Duvall for Winslow.

DUELL, *Commissioner:*

This is an appeal from the decision of the Examiners-in-Chief awarding priority of invention to Austin on the following issue:

In a platform-scale, the combination of twist-shafts, a rear lever, a multiplying-lever, a short lever, carried by one of said twist-shafts and connected to said multiplying-lever, one or more eveners, and short levers, a cross-beam, and connections between the several levers.

The record in this case is very meager and unsatisfactory. Had the record contained the alleged facts set forth in the briefs of counsel the solution of the questions involved in this proceeding might have been easier.

Winslow, the senior party, has taken no testimony to prove his case, but rests on his record date. Had he seen fit to go upon the witness-stand and submit to cross-examination he might have removed the cloud which rests upon his case as presented in the record. He chose, however, to remain silent when he should have spoken and must take the consequences. It appears that on June 1, 1893, he filed an application, on which Patent No. 524,271 was granted August 7, 1894. On June 24, 1895, he filed an application for a reissue of this patent, which was put in interference with the application of Austin, the junior party, filed January 12, 1895. The date of Winslow's reduction to practice is the date of his original application, June 1, 1893, (*Smith* v. *The Goodyear Company*, 11 O. G., 246,) and it is incumbent on Austin to overcome this date in order to be awarded priority.

Before considering the proofs filed on behalf of Austin his contention that Winslow is estopped from asserting his right to the subject-matter of the issue, as claims covering this matter were presented in the original application and after rejection on references were canceled, will be disposed of.

While it is well settled that claims contained in the reissue patent which were asserted in the original application, but were rejected and canceled, will not be sustained by the courts, and therefore should not be allowed by the Office, yet this question is one between the public and the applicant making the claims. This question of estoppel has no bearing upon the question of priority, the question for consideration in an interference proceeding, and therefore will not be considered here. (*Hoeveler et al.* v. *Verner et al.*, 43 MS. Dec., 444, 448.)

Austin sets up in his preliminary statement conception in May, 1890, and an explanation to others at the same time; that he made drawings as early as December, 1890, and that he embodied the invention in full-sized scales in the spring of 1894, the patterns from which the scales were produced being made as early as November, 1893. Three drawings are offered in evidence by Austin. The drawing "Exhibit A" illustrates the invention in issue, and Austin claims that he made it in December, 1890. The drawing "Exhibit C," said to have been made

by him July 4, 1892, shows all of the machine except the rear lever. The drawing "Exhibit B" shows the rear lever, and it is claimed that it was made in January, 1893, for the purpose of making a pattern. The patterns that are said to have been made and the complete scales are not produced, and no witnesses are called to corroborate Austin as to the making of the pattern or the scales. His testimony as to the disclosure is to the effect that he described the invention to Winslow, to Licht, and, he thinks, to Keeny, in the winter of 1892–93, by drawings made on the sand floor of his shop and by sketches on pieces of dressed lumber in the shop. He also testifies that he fully explained the invention to Winslow during this winter from the drawings offered as exhibits, and that Winslow never denied that the invention was Austin's, but told him he thought, as it had been discarded by Austin as not being good enough for him, he (Winslow) would patent it.

Licht was examined as a witness for Austin; but he was asked nothing about the drawings Austin claims to have made on the sand floor and dressed lumber. When asked when Austin explained the invention to him, he said:

A. I cannot say. It has been a good many years ago; I cannot recollect the date.
Q. 8. Could you tell the year? A. I don't really think I can.

In reply to a leading question he stated that he saw Austin's drawing and Austin explained the invention to him prior to June 1, 1893, the time when Winslow filed his application. He also testifies that he was associated with Winslow in business in getting up a scale; but he never heard Winslow lay claim to the invention in controversy.

Keeny, the only other witness called on behalf of Austin, was not questioned as to any disclosure made to him by Austin. He states merely that he had seen the drawing "Exhibit A;" but when asked whether it was prior to June, 1893, he stated that he could not say—he did not know the exact date. But he states that he knew that Austin had made drawings before the application of Winslow was sent in to the Patent Office.

The whole testimony in reference to drawings and explanation offered on behalf of Austin is unsatisfactory, and the testimony of Licht and Keeny, in my opinion, falls short of corroborating Austin as to the dates when the drawings were made.

The fact of conception by an inventor, for the purpose of establishing priority, cannot be proved by his mere allegation nor by his unsupported testimony where there has been no disclosure to others or embodiment of the invention in some clearly-perceptible form, such as drawings or model, with sufficient proof of identity in point of time, for otherwise such facile means of establishing priority of invention would in many cases offer great temptation to perjury and would have the effect of virtually precluding the adverse party from the possibility of rebutting such evidence. Hence it has been ruled in many cases that the mere unsupported evidence of the alleged inventor on an issue of priority as to the fact of conception and the time thereof cannot be received as sufficient proof of the fact of prior conception. (*Mergenthaler* v. *Scudder*, 81 O. G., 1417, 1420.)

In *Young* v. *Donnelly* (82 O. G., 1417) it was held that Young's testimony alone was insufficient to prove in a proceeding like the present that he made the drawing at the time stated, especially when the onus of proof was upon him.

Austin testified that in the winter of 1892–93 he fully described the invention to Winslow, who was then in his employ. It is true that Austin's testimony is uncorroborated; but I see no reason why on that account it should be disregarded. I take it that in interference proceedings where the fact is one that is not solely within the personal knowledge of the party to the interference his testimony cannot be ignored simply because it is uncorroborated. Austin is certainly a competent witness to testify as to a claimed disclosure of the subject-matter of the interference to his adversary, Winslow. As well might it be claimed that in a suit brought on a contract where the answer denied that the plaintiff had complied with all of the terms of the contract his testimony on that point would not, if uncontradicted, be sufficient to prove that fact, or at least be sufficient proof on which to submit the question to the jury for determination.

No attempt is made to impeach Austin or to cast discredit on his testimony, save in the brief of Winslow's counsel. If Austin testified falsely as to his disclosure to Winslow, how easily the latter could have contradicted him. Winslow chose, however, to rest his case upon a technicality. His failure to contradict Austin's testimony as to the latter's disclosure to him of the invention forbids any escape from the conclusion that he could not truthfully deny the same. It would not have involved any great expense of time or money for Winslow to have gone upon the witness-stand and denied that Austin had ever disclosed the invention to him.

In my opinion when Austin testified that he had disclosed the invention to Winslow the burden of proof was shifted and Winslow could no longer safely rely upon his record date. Where a claimed fact must be equally within the knowledge of two parties and one asserts it and the other fails to deny it, the latter cannot complain if the asserted fact is found by the tribunal called upon to pass on it to be true.

In the absence of proof showing a disclosure of the invention by Austin to Winslow I should be inclined to hold that Austin's proofs were not sufficient to overcome Winslow's *prima facie* date of invention; but I cannot disregard the uncontradicted testimony as to the disclosure, nor can I lose sight of the other facts showing that Winslow never made before his co-employees any claim to the invention involved in this controversy and that he had access to Austin's office, whereby he could gain a knowledge of any steps being taken by Austin looking toward improvements in scales, of which Austin was a manufacturer.

I am therefore constrained to affirm the decision of the Examiners-in-Chief awarding priority to Austin.

EX PARTE F. H. GILSON COMPANY.

Decided June 16, 1898.

1. TRADE-MARK—"GILSON"—SURNAME—SALIENT FEATURE OF CORPORATE NAME.

The word "Gilson," being the salient feature of applicant's corporate name, refused registration as a trade-mark under the general rule that an ordinary surname cannot be appropriated as a trade-mark by any one person against others of the same name who are using it for a legitimate purpose.

2. SAME—SAME—SAME—NAME OF PATENTED DEVICE.

The word "Gilson," being the name of a patented album known as the "Gilson Album," refused registration as a trade-mark for photograph-albums and photographic exposure-tables on the ground that the name of an inventor which has become the generic name of the thing patented passes to the public when the monopoly created by the patent expires.

ON petition.

TRADE-MARK FOR BOOKS.

Application of F. H. Gilson Company for registration filed March 19, 1898, No. 55,415.

Messrs. Wright, Brown & Quinby for the applicant.

DUELL, *Commissioner:*

Applicant seeks to register the word "Gilson," the salient feature of its corporate name, as a trade-mark for photograph-albums and photographic exposure-tables and seeks by petition to review the action of the Examiner refusing its registration.

The general rule is well settled that an ordinary surname cannot be appropriated as a trade-mark by any one person against others of the same name who are using it for a legitimate purpose. (*Brown Chemical Co.* v. *Meyer*, 55 O. G., 287; 139 U. S., 540.) In that case the Court said:

It is hardly necessary to say that an ordinary surname cannot be appropriated as a trade-mark by any one person as against others of the same name, who are using it for a legitimate purpose.

In *Columbia Mill Co.* v. *Alcorn* (65 O. G., 1916; 15 U. S., 460) the Court said:

In the leading case of *Amoskeag Mfg. Co.* v. *Spear* (2 Sandf., 599) it is laid down that no one has a right to appropriate a sign or symbol which, from the nature of the fact it is used to signify, others may employ with equal truth, and, therefore, have an equal right to employ for the same purpose.

It is upon these principles that a person may put his own name upon his own goods, notwithstanding another person of the same name may, in that name, manufacture and sell the same or similar articles.

It is true that the courts have often restrained the use of surnames even by those born to such names; but in all such cases it will be found that such use has been enjoined only where "fraud upon another is manifestly intended or where he has assigned or parted with his right to use it." (*Brown Chemical Co.* v. *Meyer*, *supra.*)

That the word here sought to be registered is a part of applicant's corporate name does not change the rule of law applicable to the subject from what it would be were the applicant an individual seeking to register his own name as a trade-mark. In other words, as was said by Judge Bradley in *Celluloid Mfg. Co.* v. *Cellonite Mfg. Co.*, (41 O. G., 693; 32 Fed. Rep., 94, 97,) a suit brought to restrain the use of a corporate name:

The fact that both are corporate names is of no consequence in this connection. They are the business names by which the parties are known, and are to be dealt with precisely as if they were the names of private firms or partnerships.

The trade-mark act under which registry is sought distinctly states that no trade-mark shall be registered which is merely the name of the applicant. This would seem to be controlling, for the trade-mark here sought to be registered is the essential feature of applicant's name. The fact that the word "Gilson" is not the full name of the corporation, but only a portion of it, is to my mind immaterial.

In *ex parte Adriance, Platt & Co.*, (20 O. G., 1830,) where applicant sought to register as a trade-mark the word "Adriance," registry was refused, even when the name was used together with a symbolic representation.

Another ground for refusing the registration in this case is found in the fact stated at the hearing that the name was used in connection with a patented album. This album is known as the "Gilson album," and is so advertised, as shown by a circular to which my attention was called at the hearing. It has been held by the United States Supreme Court that where the name of the inventor has become the generic name of the thing patented this name passes to the public when the monopoly created by the patent expires. (*Singer Mfg. Co.* v. *June Mfg. Co.*, 75 O. G., 1703.) A patent is granted for a limited term, while a trade-mark once registered may be reregistered without limit. Manifestly this Office should not register the generic name of a patented thing as a trade-mark.

In this case, as I understand it, the right to use the mark on photograph-albums would expire before the first term for which the trade-mark might issue would end. In the case last cited the Court said:

It equally follows from the cessation of the monopoly and the falling of the patented device into the domain of things public, that along with the public ownership of the device there must also necessarily pass to the public the generic designation of the thing which has arisen during the monopoly, in consequence of the designation having been acquiesced in by the owner, either tacitly, by accepting the benefits of the monopoly, or expressly by his having so connected the name with the machine as to lend countenance to the resulting dedication. To say otherwise would be to hold that although the public had acquired the device covered by the patent, yet the owner of the patent or the manufacturer of the patented thing had retained the designated name which was essentially necessary to vest the public with the full enjoyment of that which had become theirs by the disappearance of the monopoly. In other words, that the patentee or manufacturer could take the benefit and advantage of the patent upon the condition that at its termination the monopoly should cease, and yet when the end was reached disregard the public dedication and practically perpetuate indefinitely an exclusive right.

However this may be, I prefer to base my decision upon the broad ground that the mere name (or part of a name) of a corporation which is a surname is no more registrable by a corporation than is the individual name by the one entitled to the use, though not exclusive thereof.

The decision of the Examiner is therefore affirmed.

EX PARTE KAPP.

Decided June 16, 1898.

DESIGN—LIMITING DESIGN TO ONE MEMBER OF A DEVICE.

Where applicant shows and describes a pair of tongs consisting of two members of the same shape or configuration pivoted together, *Held* that if applicant has invented and produced anything that is novel it is not a pair of tongs, but the shape or configuration of a member or jaw of a pair of tongs, and the description and claims should be limited accordingly.

ON petition.

DESIGN FOR DEVICES FOR REMOVING CLOTHES FROM WASHBOILERS.

Application of Levi M. Kapp and John L. Kapp filed March 26, 1897, No. 629,446.

Messrs. Louis Bagger & Co. for the applicants.

DUELL, *Commissioner:*

This is a petition from the action of the Examiner of May 24, 1898, that—

if applicant should revise his application to set up the design as residing in one of the members of the tongs, in order that the claim be for the design for the shape and configuration of an article of manufacture, and not of an organized apparatus, as is now the case, further consideration will be given the application.

Applicants show and describe a pair of tongs consisting of two members of the same shape or configuration pivoted together. In one figure of the drawing the tongs are shown with the jaws open, and the other figure shows the jaws closed. This pair of tongs seems to be an operative apparatus the form or contour of which as a whole is changed as the tongs are opened or closed. It is not the intent of the design law to cover designs of this character, and it is contrary to the practice of the Office to allow such case. (*Ex parte Smith*, 81 O. G., 969; *ex parte Tallman*, 82 O. G., 337.) If applicants have invented and produced anything that is novel, it is not a pair of tongs, but the shape or configuration of a member or jaw of a pair of tongs. Their description and claim should be limited to this. In requiring this limitation applicants have not been deprived of any of their rights. I have reached this conclusion after a careful consideration of applicants' brief and the design patents to which they refer in their petition.

The requirement of the Examiner is sustained and the petition denied.

EX PARTE ADAMS.

Decided June 11, 1898.

1. DESIGNS—ILLUSTRATION—ESSENTIAL FEATURES.
   In design patents it is permissible to show the essential features in full lines and the remaining parts of the design in dotted lines.
2. SAME—SAME.
   Design patents should disclose all and nothing more than the design which the patent is intended to cover, and the specification should recognize the fact that the entire thing disclosed constitutes the design.
3. SAME—INSTRUMENT "PRODUCED."
   The law requires that the inventor shall have "produced" a design, and this cannot be done without producing some instrument embodying the peculiar shape or configuration constituting the design. It is the instrument which has actually been produced and not the bare idea of shape which is patentable.
4. SAME—GENUS AND SPECIES.
   Modifications of designs do not exist, and there is no such distinction as genus and species as applied to design patents. (*Ex parte Eldon*, 83 O. G., 748; *Ex parte Jenks*, 83 O. G., 1513.)

ON petition.

DESIGN FOR BEDSTEADS.

Application of John M. Adams filed October 9, 1897, No. 654,726.

Mr. Geo. E. Waldo for the applicant.

GREELEY, *Assistant Commissioner:*

This is a petition from the action of the Primary Examiner making certain formal objections to the above-entitled application.

The applicant shows and describes rods of peculiar shape or configuration arranged in a particular relation to each other and said in the specification to constitute a—

panel for the head or foot of a bedstead or similar article.

The head or foot of a bed is shown in dotted lines to illustrate the embodiment of the design therein. The Examiner insists that the entire head of the bedstead should be shown in full lines and that the description and claim should cover it as a complete article of manufacture.

The applicant has disclosed the complete thing which he has produced and has merely made a distinction in the drawing between the essential features and other parts of the design. All applicants for design patents are permitted to state in the specification what constitutes the essential features of the design, and there appears to be no good reason why they should not be permitted to make the same distinction in the drawing. It is therefore held that the applicant's illustration is sufficient.

It must be held, however, that the parts shown in dotted lines constitute part of the design and that this fact should be recognized in the specification. It has been held that the drawing should illustrate the entire design and not merely a part thereof, (*ex parte Parker*, 80 O. G., 1892,) and it seems equally obvious that an applicant should not be permitted to disclose in his drawing anything more than the design upon which he wishes a patent. To disclose other features or inventions is unnecessary and is apt to lead to confusion as to what the patent covers. Since the test of infringement of design patents is the similarity of appearance, it follows that such patent should disclose all and nothing more than the design which the patent is intended to cover. It is apparent, therefore, that if the parts shown in dotted lines have any proper place in the drawing they constitute part of the design. The applicant appears to recognize the fact that these parts are necessary to properly illustrate the design.

If the parts shown in dotted lines were omitted, all that would remain would be the several separate and unconnected rods. In other words, the design would not be limited to a single article of manufacture, as provided in section 4929 of the Revised Statutes, but would cover five independent and unconnected articles.

The following quotation from *ex parte Brand* (83 O. G., 747) is pertinent on this question:

> The fact that two articles are used together does not make them, when so used, constitute a unitary design, but the result is merely an aggregation of the two designs. (*Ex parte Fatiz*, 35 O. G., 980; *ex parte Haggard*, 80 O. G., 1196.) A design must be a single unchangeable article of manufacture and must not be made up of independent detachable parts. As stated in *ex parte Brower*, (C. D., 1872, 151:)
>
> "It is arbitrary and unchangeable, either by the separation or the rearrangement of its features."

It is obvious that so long as the several rods are unconnected with each other they do not constitute a unitary design arbitrary and unchangeable either by the separation or rearrangement of these rods.

This application could not properly, and is not intended to, cover the shape or configuration of each of the rods separately, but is intended to cover their arrangement with reference to each other. Leaving out of consideration the dotted lines there is disclosed merely the idea of arrangement without any tangible embodiment of it. The law requires that the inventor shall have "produced" a design, and this cannot be done without producing some instrument embodying the peculiar shape or configuration constituting the design. It is this instrument and not the bare idea of shape which is patentable, and therefore the application should cover the instrument which has actually been produced, leaving to the courts to determine what are equivalents of it.

The applicant does not seem to recognize the fact that modifications of designs do not exist and that there is no such distinction of generic and specific design patents as there is in mechanical patents, for in the last paragraph of the specification it is said:

> * * * My invention contemplates any variation from the specific lines shown which will not impair the general effect thereof.

Such statements are not permissible in design patents. (*Ex parte Eldon*, 83 O. G., 748; *ex parte Jenks*, 83 O. G., 1513.)

The petition is granted in so far as the illustration is concerned, but as to other matters it is denied.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

MESSINGER *v.* THE COMMISSIONER OF PATENTS.

Decided May 3, 1898.

1. APPEAL TO THE COURT OF APPEALS OF THE DISTRICT OF COLUMBIA—REFUSAL OF COMMISSIONER TO GRANT REHEARING—APPEAL DISMISSED.
   A decision was rendered by the Commissioner on February 28, 1891, rejecting the claims. There were no other or further steps taken in the case until October 23, 1896, when appellant moved for a rehearing and for leave to amend by canceling certain claims embraced by the original patent and to insert in lieu thereof modified claims filed with the motion for rehearing. This motion was on March 13, 1897, denied by the Commissioner. On appeal to the Court of Appeals from this ruling of the Commissioner refusing to rehear the case *Held* that the appeal cannot be maintained, as an appeal will not lie from a ruling refusing a rehearing or an application for leave to amend the original claims.
2. SAME—LIMIT OF APPEAL.
   Held, further, that the appeal cannot be maintained, as it was not taken from the original decision of the Commissioner of February 28, 1891, refusing the reissue of the patent, either to the Supreme Court of the District of Columbia or to the Court of Appeals of the District of Columbia, within the limits prescribed by the rule of the Court of Appeals after the rule was adopted.
3. SAME—REISSUE, DELAY IN APPLYING FOR—INADVERTENCE, ACCIDENT, OR MISTAKE.
   The original patent was issued on September 15, 1885, and an application for reissue was not filed in the Patent Office until November 6, 1888. *Held* that the application for reissue of the patent was not made within a reasonable time and that there was no sufficient evidence of inadvertence, accident, or mistake to entitle appellant to a reissue of the patent under the statute, according to the rule laid down in the case of *Topliff v. Topliff*, (59 O. G., 1357; 145 U. S., 156.)
4. REISSUE—DILIGENCE IN DISCOVERING MISTAKE IN ORIGINAL PATENT, IN APPLYING FOR REISSUE, AND IN THE PROSECUTION OF THE APPLICATION.
   From the well-settled principles of the law of reissues, as expressed by the Supreme Court, not only must the application for reissue be founded upon the same invention as that covered by the original patent and as shown by the original specification and claims, but there must be due diligence shown in discovering the mistake or inadvertence and in the application for reissue and in the prosecution of such application.

Mr. Julian C. Dowell for the appellant.

Mr. W. A. Megrath for the Commissioner of Patents.

ALVEY, *J.:*

This appeal is brought into this court from the Patent Office, and it is from a ruling or rulings in that Office refusing a reissue patent upon a patent granted to the appellant on the 15th of September, 1885, for an improvement in grain and harvester binders. The case was brought into this court by an appeal entered on the 21st of April, 1897, the record of which was filed in this court on the 22d of April, 1897.

It appears from the record produced that the original patent issued to the appellant on the 15th of September, 1885, and that on November 6, 1888, more than three years afterward, the appellant filed in the Patent Office an application for the reissue of the patent granted to him, upon the allegation that the original patent, No. 326,443, was inoperative and invalid by reason of a defective and insufficient specification, resulting from an error arising through inadvertence, accident, or mistake and without any fraudulent or deceptive intention, the said defects and insufficiencies consisting in the omission in the patent to clearly, fully, and accurately describe and claim the invention described and shown therein. This allegation was made to bring the case within the terms of section 4916, Revised Statutes of the United States. It is also shown by the record that this application for reissue was fully and fairly examined by the officials of the Patent Office, and, not finding sufficient ground for the reissue, the application was rejected. It was rejected first by the Primary Examiner, and upon appeal it was rejected by the Examiners-in-Chief, and, finally, upon appeal to the Commissioner in person, the preceding rulings by the Examiners were affirmed and the application was denied. This latter decision was rendered by the Assistant Commissioner on the 28th of February, 1891. After this decision of February 28, 1891, there was no other or further step taken in the matter until October 23, 1896, nearly six years after the final ruling refusing the application for reissue, when the appellant moved for a rehearing and for leave to amend by canceling claims 4, 5, and 6, embraced by the original patent, and inserting in lieu thereof modified claims filed with the motion for rehearing. This motion for rehearing was heard by the Commissioner, and he denied the application on March 13, 1897. There were several grounds stated by the officials in the Patent Office for the denial of the application for reissue, any one of which was sufficient to defeat the application of the appellant. The Commissioner in overruling the motion for rehearing, in referring to the principle as settled by the Supreme Court of the United States in regard to the question of the time within which an application for reissue of a patent should be made, said:

I need not refer in detail to these cases; but it was held that the application for reissue must be made seasonably and as soon as the defect is discovered, and that there is no fixed right to wait two years before applying. No countenance is given to the claim that reissues may be applied for as often as desired. The ground for these decisions appears to be that where the patentee holds a grant which covers more than he has a right to claim, he should be prompt to disaffirm that to which he has no right, and that the public should know from the patent precisely what they may do and what they may not do, and ought to be informed that there is something in the patent to which the public is entitled, and that this information should reach them at as early a day as practicable. The reason likewise holds with equal force in cases where the patentee has informed the public of his claim in the original issue of the patent, but intends further on to broaden his claim. On these grounds I am of the opinion that *ex parte Galusha* has come to be in conflict with the later Supreme Court decisions; that it is not the law, and that reissue cases are abandoned after two years of inactivity, like other cases, by operation of section 4894.

The Commissioner did not name the cases in the Supreme Court to which he alluded; but we may suppose that he had reference, among others, to the recent cases of *Parker & Whipple Co.* v. *Yale Clock Co.* (123 U. S., 87) and *Topliff* v. *Topliff*, (59 O. G., 1257; 145 U. S., 156,) where the question of time and the circumstances under which applications for reissue of patents may be made is fully discussed and the rules, with their proper limitations, are stated as the result of a full review of the preceding cases upon the subject. In the last of these cases, that of *Topliff* v. *Topliff*, *supra*, the rules deduced from the cases are thus stated, the italics being ours:

First. That it shall be for the same invention as the original patent, *as such invention appears from the specification and claims of such original.*

Second. That *due diligence must be exercised in discovering the mistake* in the original patent, and that, if it be sought for the purpose of enlarging the claim, *the lapse of two years will ordinarily, though not always,* be treated *as evidence of an abandonment of the new matter to the public* to the same extent that a failure by the inventor to apply for a patent within two years from the public use or sale of his invention is regarded by the statute as conclusive evidence of an abandonment of the patent to the public.

Third. That this Court will not review the decision of the Commissioner upon the question of inadvertence, accident or mistake, *unless the matter is manifest from the record*; but that the question whether the application was made *within a reasonable time* is, in most, if not in all such cases, *a question of law* for the Court.

It is manifest from these well-settled principles by the Supreme Court that not only must the application for reissue be founded upon the same invention as that covered by the original patent and as shown by the original specification and claims, but that there must be due diligence shown in discovering the mistake or inadvertence and in the application for reissue and in the prosecution of such application. In this case all these essentials would seem to be wanting.

The case was brought here upon appeal from the order of the Commissioner refusing to reopen the case and allow the amendment proposed to be made in respect to claims 4, 5, and 6 of the original patent, and when the case was called for argument in this court it was found that there had been a motion entered on behalf of the Patent Office to dismiss the appeal, and it being apparent that the case was not properly here and was in no condition to be heard on its merits, whatever they might be, it was suggested that possibly the Commissioner of Patents might make a ruling upon the proposed substituted claims that would open the case and present the question that it was sought to have decided upon the appeal, and the case was held over to give the appellant an opportunity to apply to the Patent Office in that behalf. The application was made, but the condition of the case has been in no respect changed. The application to reopen the case was again denied; but at the same time, with a view of placing upon the record fully the grounds upon which the application was denied, the files and contents of the case were sent to the Primary Examiner, with directions to report as to whether the claims of the proposed amendments are patentable over the state of the art, whether said claims are broader than those in the patent, and whether the applicant is entitled to a reissue patent. The Primary Examiner reported upon the questions thus submitted to him, and his report was adverse to the claims of the appellant. In the conclusion of his report he says:

> After considering the circumstances of the case, the Examiner is of the opinion that the applicant is not entitled to a reissue for the reasons that the claims are unduly enlarged; that there is no sufficient evidence of inadvertence, accident, or mistake, and the delay of more than three years is not satisfactorily accounted for.

We have stated the position of the case both in the Patent Office and in this court more fully, perhaps, than is really necessary; but we deem it proper that the real status of the case may fully appear, in view of the conclusion to which we are necessarily led. The appeal cannot be maintained, first, because an appeal will not lie from a ruling refusing a rehearing or an application for leave to amend the original claims; second, because the appeal was not taken from the original order refusing the reissue of the patent either to the Supreme Court of the District of Columbia or to this court within the limit prescribed by the rule of this court after the rule was adopted, and, third, because the application for reissue of the patent was not made until after the lapse of more than three years after the date of the original patent and because there is no sufficient evidence of the inadvertence, accident, or mistake to entitle the applicant to a reissue of the patent under the statute, according to the rules laid down in the case of *Topliff* v. *Topliff*, *supra*. It therefore follows that the appeal must be dismissed, and it is so ordered.

No. 13.]

INDEX TO DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS

IN THE MATTER OF

PATENTS, TRADE-MARKS, ETC.

OFFICIAL GAZETTE—APRIL–JUNE, 1898.

VOL. 83 O G—2

I need not refer in detail to these cases; but it was held that the application for reissue must be made seasonably and as soon as the defect is discovered, and that there is no fixed right to wait two years before applying. No countenance is given to the claim that reissues may be applied for as often as desired. The ground for these decisions appears to be that where the patentee holds a grant which covers more than he has a right to claim, he should be prompt to disaffirm that to which he has no right, and that the public should know from the patent precisely what they may do and what they may not do, and ought to be informed that there is something in the patent to which the public is entitled, and that this information should reach them at as early a day as practicable. The reason likewise holds with equal force in cases where the patentee has informed the public of his claim in the original issue of the patent, but intends further on to broaden his claim. On these grounds I am of the opinion that *ex parte Galusha* has come to be in conflict with the later Supreme Court decisions; that it is not the law, and that reissue cases are abandoned after two years of inactivity, like other cases, by operation of section 4894.

The Commissioner did not name the cases in the Supreme Court to which he alluded; but we may suppose that he had reference, among others, to the recent cases of *Parker & Whipple Co.* v. *Yale Clock Co.* (123 U. S., 87) and *Topliff* v. *Topliff*, (59 O. G., 1257; 145 U. S., 156,) where the question of time and the circumstances under which applications for reissue of patents may be made is fully discussed and the rules, with their proper limitations, are stated as the result of a full review of the preceding cases upon the subject. In the last of these cases, that of *Topliff* v. *Topliff*, *supra*, the rules deduced from the cases are thus stated, the italics being ours:

'First. That it shall be for the same invention as the original patent, *as such invention appears from the specification and claims of such original.*

Second. That *due diligence must be exercised in discovering the mistake* in the original patent, and that, if it be sought for the purpose of enlarging the claim, *the lapse of two years will ordinarily, though not always,* be treated *as evidence of an abandonment of the new matter to the public* to the same extent that a failure by the inventor to apply for a patent within two years from the public use or sale of his invention is regarded by the statute as conclusive evidence of an abandonment of the patent to the public.

Third. That this Court will not review the decision of the Commissioner upon the question of inadvertence, accident or mistake, *unless the matter is manifest from the record;* but that the question whether the application was made *within a reasonable time* is, in most, if not in all such cases, *a question of law* for the Court.

It is manifest from these well-settled principles by the Supreme Court that not only must the application for reissue be founded upon the same invention as that covered by the original patent and as shown by the original specification and claims, but that there must be due diligence shown in discovering the mistake or inadvertence and in the application for reissue and in the prosecution of such application. In this case all these essentials would seem to be wanting.

The case was brought here upon appeal from the order of the Commissioner refusing to reopen the case and allow the amendment proposed to be made in respect to claims 4, 5, and 6 of the original patent, and when the case was called for argument in this court it was found that there had been a motion entered on behalf of the Patent Office to dismiss the appeal, and it being apparent that the case was not properly here and was in no condition to be heard on its merits, whatever they might be, it was suggested that possibly the Commissioner of Patents might make a ruling upon the proposed substituted claims that would open the case and present the question that it was sought to have decided upon the appeal, and the case was held over to give the appellant an opportunity to apply to the Patent Office in that behalf. The application was made, but the condition of the case has been in no respect changed. The application to reopen the case was again denied; but at the same time, with a view of placing upon the record fully the grounds upon which the application was denied, the files and contents of the case were sent to the Primary Examiner, with directions to report as to whether the claims of the proposed amendments are patentable over the state of the art, whether said claims are broader than those in the patent, and whether the applicant is entitled to a reissue patent. The Primary Examiner reported upon the questions thus submitted to him, and his report was adverse to the claims of the appellant. In the conclusion of his report he says:

> After considering the circumstances of the case, the Examiner is of the opinion that the applicant is not entitled to a reissue for the reasons that the claims are unduly enlarged; that there is no sufficient evidence of inadvertence, accident, or mistake, and the delay of more than three years is not satisfactorily accounted for.

We have stated the position of the case both in the Patent Office and in this court more fully, perhaps, than is really necessary; but we deem it proper that the real status of the case may fully appear, in view of the conclusion to which we are necessarily led. The appeal cannot be maintained, first, because an appeal will not lie from a ruling refusing a rehearing or an application for leave to amend the original claims; second, because the appeal was not taken from the original order refusing the reissue of the patent either to the Supreme Court of the District of Columbia or to this court within the limit prescribed by the rule of this court after the rule was adopted, and, third, because the application for reissue of the patent was not made until after the lapse of more than three years after the date of the original patent and because there is no sufficient evidence of the inadvertence, accident, or mistake to entitle the applicant to a reissue of the patent under the statute, according to the rules laid down in the case of *Topliff* v. *Topliff*, *supra*. It therefore follows that the appeal must be dismissed, and it is so ordered.

DIGEST OF DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS

IN THE MATTER OF

PATENTS, TRADE-MARKS, ETC.

OFFICIAL GAZETTE—APRIL–JUNE, 1898.

DIGEST OF DECISIONS.

[Decisions of the United States courts are indicated by an asterisk (*).]

ABANDONED APPLICATIONS.

(See Applications, 5, 6.)

SECOND APPLICATION—ABANDONMENT.

Park filed an application May 6, 1895, which disclosed but did not claim the subject-matter of the issue and which was passed to issue November 16, 1895. The application in the interference was filed July 30, 1896, containing and claiming the subject-matter of the first application, and in addition thereto new matter. The first application became abandoned after the second application was filed. *Held* that the subject-matter of the first application being a part of the second application, any idea that Park intended to abandon the subject-matter of the application is negatived.

[Park *v.* Cain, 1345.

ABANDONED CLAIMS.

(See Reissues, 2.)

ABANDONED INVENTIONS.

(See Abandoned Applications; Reissues, 1.)

ADJUDICATION.

(See Appeal from the Court of Claims.)

AMENDMENTS.

(See Interference, 26, 27, 28.)

APPEAL—EX PARTE.

(See Appeal to the Examiners-in-Chief, 5; Motion to Dissolve Interference, 5.)

APPEAL FROM THE COURT OF CLAIMS.

SECOND SUIT—RES ADJUDICATA—ESTOPPEL.

Claimant filed a petition in the Court of Claims for royalty upon cartridges and primers alleged to have been manufactured by the United States under his patent. The petition was dismissed. A motion for new trial was filed by claimant and was also dismissed. Application for appeal was filed; but appeal was not allowed. A second petition was filed after the first petition had been dismissed and was based upon the same patent involved in the first petition. This petition was also dismissed by the Court of Claims. Appeal from this judgment was taken to the Supreme Court. The defense was that of *res adjudicata*. *Held* that even if a somewhat different theory or state of facts were developed upon the trial of the second petition the judgment in the former petition would not operate the less as an estoppel, since the patentee cannot bring suit against an infringer upon a certain state of facts and after a dismissal of his action bring another suit against the same party upon the same state of facts and recover upon a different theory. The judgment in the first action is a complete estoppel in favor of the successful party in a subsequent action upon the same state of facts. (Walk. on Pats., sec. 468; *Dubois* v. *Railway Co.*, 5 Fish., 200; *Bradley Mfg. Co.* v. *Eagle Mfg. Co.*, 58 O. G., 315; 97 Fed. Rep., 982.)

[*Hubbell *v.* United States, 1661.

APPEAL TO THE COMMISSIONER OF PATENTS.

LIMIT OF—INTERFERENCE—DECISION OF LOWER TRIBUNAL IN INTERLOCUTORY MATTERS BINDING.

Appeals upon interlocutory matters should not be accepted after the expiration of the limit of appeal. The decision of a lower tribunal in such matters should not be set aside except upon a clear showing of error.

[Orias *v.* Stimpson, 293.

APPEAL TO THE COURT OF APPEALS OF THE DISTRICT OF COLUMBIA.

(See Reissues, 3.)

1. INTERFERENCE—WEIGHT TO BE GIVEN TO DECISIONS OF PATENT OFFICE.

Where the several tribunals of the Patent Office concur in findings in respect to a mere matter of fact about which testimony is conflicting, *Held* there is no reasonable ground for supposing that the Court of Appeals of the District of Columbia will reverse those findings unless it be shown clearly and beyond reasonable doubt that there had been error committed in comparing and weighing the evidence.

[*Glenn *et al. v.* Adams, 156.

2. SAME—PRIORITY—DECISION OF COMMISSIONER AFFIRMED.

The decision of the Commissioner of Patents in awarding priority of invention to Adams affirmed. [*Id.

3. REFUSAL OF COMMISSIONER TO GRANT REHEARING—APPEAL DISMISSED.

A decision was rendered by the Commissioner on February 28, 1891, rejecting the claims. There were no other or further steps taken in the case until October 23, 1896, when appellant moved for a rehearing and for leave to amend by canceling certain claims embraced by the original patent and to insert in lieu thereof modified claims filed with the motion for rehearing. This motion was on March 12, 1897, denied by the Commissioner. On appeal to the Court of Appeals from this ruling of the Commissioner refusing to rehear the case *Held* that the appeal cannot be maintained, as an appeal will not lie from a ruling refusing a rehearing or an application for leave to amend the original claims.

[*Messinger *v.* Commissioner of Patents, 1995.

4. LIMIT OF APPEAL.

Held, further, that the appeal cannot be maintained, as it was not taken from the original decision of the Commissioner of February 28, 1891, refusing the reissue of the patent, either to the Supreme Court of the District of Columbia or to the Court of Appeals of the District of Columbia, within the limits prescribed by the rule of the Court of Appeals after the rule was adopted. [*Id.

APPEAL TO THE EXAMINERS-IN-CHIEF.

(See Motion to Dissolve Interference, 6; Reopening of Rejected Cases.)

1. DISCRETION OF THE EXAMINERS-IN-CHIEF.

On an appeal from the decision of the Primary Examiner on a motion involving the right of an applicant to make a claim it is doubtful whether the adverse party should be heard, even as a matter of courtesy. This matter should, however, be left to the discretion of the Examiners-in-Chief.

[Painter *v.* Hall, 1808.

2. RIGHT OF MOVING PARTY TO BE HEARD BEFORE APPELLATE TRIBUNAL.

The party bringing such motion, so far as an appeal is concerned, is no more entitled to be heard as of right, whatever may be decided by the Office as regards his appearing before an appellate tribunal as a matter of policy, than any person not before the Office whose rights to freely manufacture the invention covered by the claim might be curtailed by the issuance of a patent. [Id.

3. RIGHT OF PARTIES TO BE HEARD—RIGHT OF APPEAL.

Such motion is heard *inter partes* by the Primary Examiner as a matter of Office policy, in order that the facts and reasons which in the opinion of the moving party negative the patentability of the claim or show that his opponent is not entitled to make the claim may be clearly presented; but the Office does not and cannot recognize the moving party as a party in interest entitled to contest the patentability of another's claims. He has no right of appeal from a decision denying his motion. [Id.

4. SAME.

The same reasons which justify the rule which refuses the right of appeal from the decision of the Primary Examiner affirming patentability or the right of the respective parties to make the claim justify the Office in refusing to permit the appeal taken by the party whose claims are affected to be made a contest *inter partes* before the appellate tribunal.

[Id.

5. SAME.
Whether or not the adverse party is to be heard upon the appeal upon the question raised by the motion to dissolve, it is clear that he cannot be heard before the appellate tribunal as to the validity of the appeal of the party against whom the question of patentability or right to make the claim has been decided by the Primary Examiner. As to questions involving validity, the appeal is *ex parte* purely. [Id.

6. TIME OF TAKING APPEAL—ESTOPPEL—RIGHT OF ADVERSE PARTIES TO BE HEARD—EX PARTE QUESTION.
The question of the time of taking appeal and the question of estoppel of a party by his adoption of a course deemed to be inconsistent with an appeal are *ex parte* questions, and an adverse party has no right to be heard as a matter of course by the Examiners-in-Chief on appeal on these questions. [Id.

7. SETTING LIMIT OF APPEAL.
On a motion to dissolve on the ground of non-patentability or of no right to make a claim the Examiner should not set a limit of appeal, as the party who is affected adversely by such decision has the full statutory limit of two years within which to appeal. [Id.

8. RELIEF OF PARTY WHEN HIS OPPONENT FAILS TO TAKE AN APPEAL.
An applicant has his remedy in case his opponent fails to take an appeal from a decision of the Primary Examiner granting the motion to dissolve an interference upon the question of non-patentability or no right to make the claim. He may ask that his own application be passed to issue unless his opponent exercises his right of appeal within a reasonable time. Failure on the part of the opponent to take an appeal within such time may perhaps be held to work an estoppel, but consideration of such questions should be *ex parte*. (Citing *Abel and Dewar* v. *Maxim* v. *Nobel*, 56 O. G., 189, and *ex parte Lombard*, 43 O. G., 1347.) [Id.

APPLICANT AND PATENTEE.

(See Interference, 1, 8, 9, 10, 19, 25, 27, 28.)

APPLICATIONS.

(See Abandoned Applications; Division of Application.)

1. INCOMPLETE APPLICATION—NO DRAWING.
The rules of the Office require that in order to constitute a complete application a drawing must be filed whenever the nature of the case admits. Until a drawing is filed the application is not complete. Until an application is completed by filing all the necessary papers and the payment of the fee it cannot be examined, nor can it be placed in interference.
[Palmer and Thompson *v.* Bailey, 1207.

2. IRREGULAR PAPERS—FILING DATE OF APPLICATION.
Applicant filed a drawing and the first fee of an application on December 31, 1897. At the same time he filed an unsigned paper describing and claiming the device shown by the drawing. On January 3, 1898, he filed a petition, specification and claims, and an oath properly signed, executed, and witnessed. The application was given a filing date as a complete application, January 3, 1898. *Held* that the paper filed December 31, 1897, cannot be treated as a specification, and a petition to change the date of filing the application from January 3, 1898, to December 31, 1897, denied.
[*Ex parte* Hallberg, 1208.

3. REQUISITES OF A COMPLETE APPLICATION.
The Rules of Practice and the statutes require that the specification shall be signed by the applicant, and a complete application must comprise, in addition to the drawing and fee, a petition, specification, and oath, and an application will not be considered as complete until all its parts have been filed in this Office. [Id.

4. REFUNDING FEE—INCOMPLETE APPLICATION.
Where an applicant filed an incomplete application and first fee on December 31, 1897, and on January 3, 1898, he completed the application, with the understanding that if it were possible it would be given the earlier date, and upon consideration it was decided that the application could not be given the earlier date, *Held* that the first fee could not be refunded, as it was not paid by actual mistake, but in paying it and completing his application the applicant took his chances as to the earlier date being given to the application, and, further, the application has had a full examination on the merits. [Id.

5. CONTINUING APPLICATION.
Held, further, that while, strictly speaking, the second application for all purposes may not be susceptible of being treated as a continuation of the first application, yet for many purposes it can be so treated.
[Park *v.* Cain, 1345.

6. SAME—INTERFERENCE—CONSTRUCTIVE REDUCTION TO PRACTICE—PRIORITY.
Held, further, that the second application is, for the purpose of showing a constructive reduction to practice, a continuation of the first application, and that Park, having disclosed the subject-matter of the issue in his first application at a date prior to any date that can be given to Cain, is entitled to an award of priority. [Id.

ATTORNEYS.

1. ATTORNEYS PRACTICING BEFORE PATENT OFFICE—DISBARMENT—COMMISSIONER OF PATENTS HEARING CHARGES—SECTION 487, REVISED STATUTES, CONSTRUED.
Section 487, Revised Statutes, remits to the Commissioner of Patents the entire cognizance of cases of malpractice occurring before his Bureau and under it the hearing of such cases is to be by him and not by the Secretary of the Interior. It is eminently fitting that this should be so in view of the character of the duties, judicial or quasi-judicial, which are vested in him.
[*United States, *ex rel.* Wedderburn, *v.* Bliss, Secretary of the Interior, 206.

2. SAME—SAME—SUPERVISORY POWER OF THE SECRETARY OF THE INTERIOR OVER THE COMMISSIONER OF PATENTS IN DISBARMENT PROCEEDINGS—"SUBJECT TO THE APPROVAL OF THE SECRETARY OF THE INTERIOR" CONSTRUED.
By section 487, Revised Statutes, there is reserved to the Secretary of the Interior a supervising power over the action of the Commissioner of Patents; but this is no more than an executive or administrative proceeding. The provision that the judgment of the Commissioner shall "be subject to the approval of the Secretary of the Interior" does not make the Secretary a court for the trial of the case, nor does it make him in any proper sense an appellate tribunal before which it would be proper for a party in interest to demand and to be accorded a hearing. [*Id.

3. SAME—SAME—SAME—SAME.
The meaning of such supervisory power is not that the Secretary must try or hear the cause, but that the judgment of the Commissioner is not to be carried into effect until it receives the approval of the Secretary, and in order to give it this approval, or conversely and by implication his disapproval, the Secretary is necessitated to go over the record of the proceedings that is made up for him according to law or regulation. This, as we have said, is a judicial or quasi-judicial duty on his part; but it is not the equivalent in any sense of the hearing of a cause. [*Id.

4. SAME—SAME—OFFICER BEFORE WHOM CHARGES ARE TO BE HEARD—SECTION 487, REVISED STATUTES, AND ACT JULY 4, 1884, CONSTRUED.
When the act of July 4, 1884, and section 487, Revised Statutes, are compared and construed together, it is clear that it was not the intention of Congress to repeal section 487 by the enactment of the latter law, and if such was not the intention of Congress then the only reasonable construction of the act of 1884 was that the hearing therein provided to be given to the persons charged with malpractice was the hearing implied to be by section 487 of the Revised Statutes. So far, at least, as the Patent Office was concerned the act of 1884 made no substantial change in the law. [*Id.

5. SAME—SAME—SAME—"AFTER NOTICE AND OPPORTUNITY FOR HEARING" IN ACT JULY 4, 1884, CONSTRUED.
The provision of the act of July 4, 1884, is not that the Secretary might exclude from practice after notice and hearing of the party charged, which would be the more natural form of expression if it was the intention that the hearing should be before the Secretary in person, but that he might exclude "after notice and opportunity for a hearing," meaning plainly a hearing before some proper officer in such reasonable mode as should be provided by regulation of the Department.
[*Id.

6. SAME—SAME—SAME—SAME.
The word "hearing" in law and in this statute means something more than oral argument. It means, also, the right to adduce testimony. If the sole hearing contemplated by the statute was to be had before the Secretary, the Commissioner of Patents could not hear it at all, and the only duty that could reasonably be imposed upon that officer was that of taking the testimony and reporting it to the Secretary; but this conclusion would be in direct contravention of section 487 of the Revised Statutes, which explicitly provides that the Commissioner shall determine the matter, subject only to the approval of his action by the Secretary of the Interior.
[*Id.

7. SAME—SAME—SAME—WEIGHT TO BE GIVEN TO DEPARTMENT'S CONSTRUCTION OF STATUTE.
The construction placed by an executive department of the Government upon a statute enacted for its guidance and the regulation of its business must, unless it be plainly erroneous, receive due weight and consideration and should not be disregarded, except for cogent reasons. When, therefore, the Department, which was called upon to administer the act of 1884 and construe that act in connection with section 487 of the Revised Statutes, did so construe it that the notice and an opportunity for a hearing therein provided to be given should be given by the head of the proper Bureau and that the investigation should be conducted by such Bureau officer, subject to the approval of his findings by the Secretary of the Interior, it is not apparent that there was error in that construction.
[*Id.

8. SAME—SAME—MANDAMUS TO COMPEL THE SECRETARY TO GIVE A HEARING—JURISDICTION OF COURT TO ISSUE WRIT DOUBTFUL.
Assuming that mandamus is proper whenever an inferior court or a judicial officer charged with the exercise of discretionary or judicial functions either assumes to exercise jurisdiction when none exists or refuses to entertain jurisdiction

with which he is by law invested, without regard to the question whether there is any appeal from his judgment when rendered and when he has acted, *Held* that it is doubtful whether the refusal of the Secretary to accord to the relator the opportunity to make an argument, especially when it is not shown or in any manner intimated how or wherein the Secretary erred or was mistaken or misled, is to be regarded as a jurisdictional matter for which the writ of mandamus would be proper. [*Id.

BILL IN EQUITY.

(See Suits Under Section 4915, Revised Statutes.)

BURDEN OF PROOF.

(See Interference, 12, 37.)

CAVEATS.

1. STATUTE CONSTRUED—RIGHT OF PERSONAL REPRESENTATIVE TO FILE.
Section 4902 of the Revised Statutes of the United States, under the terms of which caveats may be filed, does not give the right to file a caveat to any one other than the inventor, and in the absence of any expressed right being vested under the statute in the personal representative of an inventor to file a caveat no such right exists, nor can it be implied.
[*Ex parte* Conklin, 1660.

2. STATUTE AND RULE CONSTRUED—RENEWAL.
Section 4902 of the Revised Statutes does not provide for the renewal of a caveat, and although the rules of the Patent Office provide for such renewal yet in the absence of any express language in the statutes giving the right of renewal in order to validate the rule the word "renewal," as employed in the rule, must be taken to mean not an extension of the caveat originally filed, but rather considered as referring to and making the so-called renewal a new caveat, based upon the papers originally filed. [Id.

3. SAME—RIGHT OF PERSONAL REPRESENTATIVE TO RENEW A CAVEAT.
If the so-called renewal must be considered in effect as a new filing of the original caveat, an executor cannot renew the caveat filed by a deceased inventor, for the reason that the executor, under the statutes, could not have filed the caveat in the first instance. [Id.

4. SAME—SAME.
An executor or an administrator of a deceased inventor is not deprived of any substantial right if he be not allowed to renew a caveat; but even if he were the remedy cannot be found in the Patent Office, but rather should be the subject of legislation by Congress. If at the time of the death of a caveator an invention had not been perfected, his executor could not file an application for patent in his representative capacity. If the invention had been perfected, then the executor could file an application for a patent, and in either case no injury that would flow from the denial of a right to renew the caveat would follow. [Id.

CHANGE OF FORM.

(See Infringement, 2.)

COMMISSIONER OF PATENTS.

(See Appeal to the Court of Appeals of the District of Columbia, 2, 3, 4; Attorneys; Copies of Patents, Exhibits, etc.; Examiners; Interference, 17, 24; Reopening of Rejected Cases.)

CONSTRUCTION OF RULES.

(See Interference, 4, 5, 6; Motion to Dissolve Interference, 6.)

CONSTRUCTION OF SPECIFICATIONS AND PATENTS.

(See Designs, 1, 2, 3, 4; Infringement, 1, 8; Invention; Particular Patents; Pioneer Invention; Process.)

"SUBSTANTIALLY AS SET FORTH."
The words "substantially as set forth" have been uniformly held by the Supreme Court to import into a claim the particulars of the specification. A claim, therefore, which might otherwise be bad, as covering a function or result, when containing these words should be construed in connection with the specification, and when so construed may be held to be valid. (Citing *Seymour* v. *Osborne*, 11 Wall., 516, and *The Corn Planter Patent*, 6 O. G., 893; 23 Wall., 181.)
[*Boyden Power Brake Company *et al.* v. Westinghouse *et al.*, 1067.

CONSTRUCTION OF STATUTES.

(See Attorneys; Caveats, 1, 2.)

CONTINUOUS APPLICATIONS.

(See Applications, 5, 6.)

COPIES OF PAPERS, EXHIBITS, ETC.

INTERFERENCE—PAPER EXHIBITS, REPRODUCTION OF—DISCRETIONARY POWER OF THE COMMISSIONER TO REQUIRE.
The rules of the Patent Office do not require that paper exhibits should be reproduced, so that copies may be furnished for the convenience of the various tribunals of the Office and for the counsel for the adverse parties. In the absence of such rule it is not within the discretion of the Commissioner of Patents to make such requirement.
[Freeman *v.* Bernstein *et al.*, 155.

DESIGNS.

1. DIVISION.
The requirement of the Examiner that applicant restrict the application to one or the other design for castings for a bedstead rail-joint affirmed.
[*Ex parte* Brand, 747.

2. SAME—ARTICLES USED TOGETHER—UNITARY DESIGN—AGGREGATION.
The fact that two articles are used together does not make them, when so used, constitute a unitary design, but the result is merely an aggregation of the two designs. (*Ex parte Potts*, 82 O. G., 980; *ex parte Haggard*, 80 O. G., 1126.) [Id.

3. SAME—SAME.
From the fact that the parts are specially designed for detachment it cannot be held that the two together constitute a unitary design merely because they may be used together. [Id.

4. SAME—DETACHABLE PARTS.
A design must be a single unchangeable article of manufacture and must not be made up of independent detachable parts. [Id.

5. MISLEADING STATEMENT IN SPECIFICATION AS TO MODIFICATIONS.
The specification contained this paragraph: "While the drawings illustrate the cylindrical body of the grip as being provided with circular rows of the perforations or holes and continuous circular ribs or beads alternating with the rows of perforations or holes, it will be understood that this specific

arrangement may be modified to some extent without departing from the spirit or principle of the present invention, the essential feature of which is a cylindrical body provided with annular rows of perforations, and exterior circumferential ribs arranged between the rows of such exterior perforations." On appeal from the requirement of the Examiner that this statement be canceled *Held* that this statement was evidently intended to make the application cover some other form or modification of design than that shown in the drawing; that it either has this effect or is unnecessary and misleading and should be canceled.
[*Ex parte* Eldon, 748.

6. SAME—EFFECT OF BROADENING CLAIM.
Held, further, that such statement does not and cannot have the effect of broadening the claim so as to cover other modifications not shown, as it purports to do, and it is therefore misleading and should be canceled. [Id.

7. SAME—TESTING MODIFICATIONS BY INFRINGEMENT.
Held, further, that, while under the test laid down by the Supreme Court in the case of *Gorham Co.* v. *White* (14 Wall., 511) as to modifications, the modifications which applicant had in mind in introducing such statement may be held infringements, yet neither the applicant nor the Office can settle this question in advance, and therefore the statement purporting to do so is misleading and should be canceled. [Id.

8. SAME—MODIFICATIONS NOT SHOWN.
If a party cannot cover two modifications by disclosing them, he should not be permitted to do so by a bare statement that his application is intended to cover them, although they are not shown. [Id.

9. DESCRIBING PREFERRED FORMS OR MODIFICATIONS.
Words or phrases referring to or describing preferred forms or modifications of designs should not be permitted in an application for a design. Modifications of designs do not exist, and applicants should restrict their drawing and description to one design.
[*Ex parte* Jenks, 1513.

10. LIMITING DESIGN TO ONE MEMBER OF A DEVICE.
Where applicant shows and describes a pair of tongs consisting of two members of the same shape or configuration pivoted together, *Held* that if applicant has invented and produced anything that is novel it is not a pair of tongs, but the shape or configuration of a member or jaw of a pair of tongs, and the description and claims should be limited accordingly.
[*Ex parte* Kapp, 1903.

11. ILLUSTRATION—ESSENTIAL FEATURES.
In design patents it is permissible to show the essential features in full lines and the remaining parts of the design in dotted lines.
[*Ex parte* Adams, 1994.

12. SAME.
Design patents should disclose all and nothing more than the design which the patent is intended to cover, and the specification should recognize the fact that the entire thing disclosed constitutes the design. [Id.

13. INSTRUMENT "PRODUCED."
The law requires that the inventor shall have "produced" a design, and this cannot be done without producing some instrument embodying the peculiar shape or configuration constituting the design. It is the instrument which has actually been produced and not the bare idea of shape which is patentable. [Id.

14. GENUS AND SPECIES.
Modifications of designs do not exist, and there is no such distinction as genus and species as applied to design patents. (*Ex parte Eldon*, 88 O. G., 748; *Ex parte Jenks*, 88 O. G., 1513.) [Id.

DILIGENCE.

(See Interference, 28; Reissues, 4.)

REDUCTION TO PRACTICE.
The question of diligence cannot be determined by any general rule applicable to all cases, but necessarily depends upon the special circumstances of each case as it arises.
[*McCormick *v.* Cleal, 1514.

DISBARMENT OF ATTORNEYS.

(See Attorneys.)

DISCLAIMERS.

(See Interference, 17.)

DIVISION OF APPLICATION.

(See Designs, 1, 2, 3.)

1. DIFFERENT PROCESSES—AGGREGATION.
Where the Examiner required division between a set of claims stated to be for the process of producing woven fabric and another set for the process of winding yarn and some of the claims of the first set included the step of winding yarn, *Held* that if the claims for producing the fabric, including the step of winding yarn, are for a legitimate combination division should not be required. If they are not for such a combination, they should be rejected for aggregation, leaving the question of division to be settled after the final determination of the question of aggregation. The practice announced in *ex parte Willcox and Borton*, (45 O. G., 458,) *ex parte Bullard*, (45 O. G., 1569,) and *ex parte Carter* (46 O. G., 1201) followed.
[*Ex parte* Tymeson and Borland, 808.

2. PROCESS—PRODUCT—APPARATUS.
A woven fabric, a process of producing the fabric and winding yarn, an apparatus for winding yarn on the spool, and a yarn-spool or bank-spool are each separate and independent inventions and should form the subject of separate applications. [Id.

3. ADDITIONAL FUNCTION.
In a divisional application a mere enlargement or extension of a certain feature whereby an additional function or capability is given the apparatus may be permitted.
[*Ex parte* Keyser, 915.

4. INDEPENDENT DEVICES.
Where two devices are independent of each other and they do not mutually contribute to produce a single result and the action of one does not in any manner modify or affect the action of the other, *Held* that division should be required.
[*Ex parte* Williams, 1346.

DOCUMENTARY EVIDENCE.

(See Interference, 22.)

DRAWINGS.

(See Applications, 1, 2, 3, 4; Designs, 5, 9; Interference, 4, 12; Reduction to Practice.)

STATUTORY REQUIREMENT OF—TINTYPE.
The statutes require that whenever the nature of the case admits of drawings one copy signed by the inventor or his attorney in fact and attested by two witnesses shall be filed in the Patent Office. A tintype not signed by the inventor or his attorney and not attested by two witnesses cannot be considered a drawing within the statutes.
[Palmer and Thompson *v.* Bailey, 1207.

(See Applications, 1, 2, 3, 4.)

INFRINGEMENT.

(See Injunction; Particular Patents, 1, 5; Use and Sale of Patented Articles.)

1. DEFENDANT WITHIN THE LETTER OF THE CLAIMS OF COMPLAINANT.
If it be conceded that Boyden's device corresponds with the letter of Westinghouse's claims 1 and 4, that does not settle conclusively the question of infringement. A charge of infringement is sometimes made out, though the letter of the claims be avoided. The converse is equally true. The patentee may bring the defendant within the letter of his claims, but if the latter has so far changed the principle of the device that the claims of the patent, literally construed, have ceased to represent his actual invention he is as little subject to be adjudged an infringer as one who has violated the letter of a statute is to be convicted when he has done nothing in conflict with its spirit and intent.
[*Boyden Power Brake Company *et al. v.* Westinghouse *et al.*, 1067.

2. PIONEER INVENTION—FUNCTION OF MACHINE.
If the patent for a machine be a pioneer, the alleged infringer must have done something more than reach the same result. He must have reached it by substantially the same or similar means, or the rule that the function of a machine cannot be patented is of no particular value. To say that the patentee of a pioneer invention for a new mechanism is entitled to every mechanical device which produces the same result is to hold that he is entitled to patent his function. Mere variations of form may be disregarded, but the substance of the invention must be there. [*Id.

3. FUNCTIONAL INVENTION—DIFFERENCE IN FORM ONLY.
The ruling of the Supreme Court that where the invention is functional and the defendant's device differs from that of the patentee only in form or in rearrangement of the same elements of a combination he would be adjudged an infringer, even if in certain particulars his device be an improvement upon that of the patentee, is in no way qualified. [*Id.

4. DISSENTING OPINION.
Mr. Justice Shiras, Mr. Justice Brewer, Mr. Justice Gray, and Mr. Justice McKenna dissented from the opinion and from the decision of the Court. [*Id.

INJUNCTION.

PRELIMINARY INJUNCTION—ARTICLES IMPORTED FROM ABROAD.
Preliminary injunction granted where a party purchases abroad articles covered by a United States patent and imports them for sale in this country.
[*Dickerson *v.* Tinling, 1663.

INTERFERENCE.

(See Appeal to the Commissioner of Patents; Appeal to the Court of Appeals of the District of Columbia, 1; Applications, 1; Copies of Patents, Exhibits, etc.; Diligence; Drawings; Examiners; Motion to Dissolve Interference; Reduction to Practice.

1. REDUCTION TO PRACTICE—LACHES IN APPLYING FOR PATENT—RIVAL INVENTORS—ESTOPPEL.
Where an inventor is guilty of laches in putting aside a machine for eleven years after it was perfected and tested, he is estopped by such laches from receiving a patent by reason of the entrance into the same field of a rival inventor who reduced the invention to practice, obtained a patent, placed the invention on the market, and gave to the world the knowledge and use of such invention.
[Mower *v.* Crisp and Copeland, 155.

2. PRIORITY—ESTOPPEL—RIGHT TO A PATENT.
While M was the first to reduce to practice and therefore entitled to an award of priority, yet on account of laches in applying for a patent he is not entitled to a patent, and the Examiner directed to reject the claims of M involved in the interference after final award of priority. [Id.

3. MOTION TO DISSOLVE—RES ADJUDICATA—PRIOR SUIT IN COURT, EFFECT OF, ON OFFICE PROCEEDINGS.
Where it was moved to dissolve an interference for the reason that the question of the interference is *res adjudicata* as between the parties, that the question of priority having been determined by a court of competent jurisdiction could not be retried by the same parties in the Patent Office, and that one of the parties was estopped from asserting his right to the invention, *Held* that these questions should not be passed upon on an interlocutory motion, as they are such questions as relate to the merits of the interference and would more properly form the basis of a judgment of priority of invention than for the dissolution of the interference.
[Roth *v.* Brown and Stillman, 503.

4. CONSTRUCTION OF RULE 96.
Rule 96 means that when the formal requirements of an application—such, for example, as the requirement for a new drawing or for an amended oath or for further action upon rejected claims which are not involved in the interference or for analogous changes—have not been complied with the interference shall be declared, so that the party whose application is in proper form shall not be unnecessarily delayed in the further prosecution of his application.
[Hammond *v.* Hart, 743.

5. RULES 93, 94, 95, AND 96.
Rule 96 does not mean that the Examiner declaring the interference can ignore the requirement that the *claims* of the party in fault must be put in such condition that they will not require alteration. If Rule 96 means that, then Rule 93 means nothing. The two rules should be construed in connection with Rules 93 and 94, so as to give vitality to all. [Id.

6. INTERFERENCE BETWEEN ALLOWED AND REJECTED CLAIMS.
Under a proper interpretation of the rules there is no justification for the declaration of an interference between the *allowed claims* of one application and the *rejected claims* of another application. Two applications do not interfere in such a case. [Id.

7. GENERIC AND SPECIFIC CLAIMS.
A generic and a specific claim do not interfere, and it does not conflict with public interest to send a generic claim to issue after a specific claim has been patented. (*Drawbaugh* v. *Blake*, 88 O. G., 1261; *Reed* v. *Landman*, 55 O. G., 1275, cited.) [Id.

8. SCOPE OF CLAIMS—EX PARTE UPTON.
So far as the case of *ex parte Upton* (87 O. G., 99) holds that an interference should be declared between two applications or between an application and a prior patent whose claims are not substantially identical in tenor and scope it is not well founded in law, and this decision is overruled. [Id.

9. INTERFERENCE IN FACT—APPLICATIONS—APPLICATION AND PATENT.
There is no different rule of law applicable to an interference when it is declared between two applications than when it is declared between an application and an unexpired patent. The same principles which determine whether there would be an actual interference must apply alike in each of the conditions in which the cases are when before the Patent Office to determine whether they would interfere. (*Keagon* v. *Carter*, 86 O. G., 513, overruled.) [Id.

10. SAME.
An interference can only be instituted for the purpose of determining the question of priority of invention between two or more parties *claiming* substantially the same patentable invention; that of necessity there must be allowed claims to all parties before an interference can be declared, and that not only a patent and an application must claim in whole or in part the same invention, but also two applications must claim in whole or in part the same invention before an interference can be declared. [Id.

11. EXAMINER SUGGESTING CLAIMS TO APPLICANTS.
Where two applications are concurrently pending having claims of different scope drawn on the same structure, there is no good reason why the Examiner should not give the applicant making the specific or narrow claim an opportunity, by suggestion, if necessary, to make the broader claim. If the suggestion is followed, then the parties would be making a claim identical in tenor and scope, and an interference will properly and naturally follow. To this extent *ex parte Weeden* (60 O. G., 1191) overruled. [Id.

12. BURDEN OF PROOF—NO DRAWING—INCOMPLETE APPLICATION.
No statutory drawing having been filed by Palmer and Thompson until after the complete application of Bailey was filed, the burden of proof in the interference is upon Palmer and Thompson.
[Palmer and Thompson *v.* Bailey, 1207.

13. INTERFERENCE IN FACT—BROAD AND NARROW CLAIMS.
Where Grimm has made a broad claim and Dolan a narrow claim, *Held* that both parties are not claiming substantially the same invention, and under *Hammond* v. *Hart* (83 O. G., 743) an interference does not properly arise.
[Grimm *v.* Dolan, 1209.

14. SAME—SAME—MAKING BROAD CLAIM.
If Dolan is the inventor of the broad invention, he should make the broad claim of the issue. As the claims now stand there is no interference in fact, as an interference should not be declared between dominated and dominating claims. (Citing *Hammond* v. *Hart*, 83 O. G., 743.) [Id.

15. PATENTABILITY OF A CLAIM IN THE INTERFERENCE.
The question of patentability of the claim in interference is not involved in the interference. (*Hisey* v. *Peters*, 71 O. G., 892; *Doyle* v. *McRoberts*, 79 O. G., 1039.) After the interference shall have been finally determined the question of patentability may be raised against the successful party.
[*Hill *v.* Hodge, 1211.

16. SAME—PARTY TO THE QUESTION OF PATENTABILITY.
When the interference has been determined and the question of patentability is before the Primary Examiner, the defeated party to the interference has no other interest in the decision on patentability than as one of the general public whose interests are under the protection of the Commissioner of Patents. [*Id.

17. DISCLAIMER—ESTOPPEL—COMMISSIONER'S DECISION AFFIRMED.
Hodge's evidence in respect of his conception of the invention does not show an intention to disclaim and is not of a nature to estop him from claiming an invention as broad as the issue. The decision of the Commissioner of Patents awarding priority to Hodge affirmed. [*Id.

18. PRODUCING SPECIES—RIGHT TO BROAD CLAIM.
As a general proposition an inventor making any generic invention necessarily produces some species of it, and the fact that he has never thought of other specific forms cannot deprive him of his right to a broad claim. The inventor may not regard his invention at the time it is produced as any broader than his specific form; but the question for consideration is not as to his opinion, but is one of fact. [*Id.

19. PRIORITY.
After reviewing the testimony, *Held* that the explanation of Dickey as to delay in applying for a patent, while plausible, was not satisfactory; but the proofs show that he was the first inventor, and priority awarded to him over the patentee, Fleming. [*Dickey *v.* Fleming, 1348.

20. FOREIGN PATENT—DATE OF REDUCTION TO PRACTICE—PRIORITY.
Appert took no testimony, but relied upon a French patent dated October 19, 1868, which was issued and published on January 13, 1894. Schmertz proved conception on January 10, 1894, and reduction to practice on January 17, 1894. *Held* that Appert's date of invention is January 13, 1894, the date of the publication of his foreign patent, and as there was no delay on Schmertz's part between the date of his conception and the date of his reduction to practice priority is awarded to Schmertz.
[Schmertz *v.* Appert, 1511.

21. SAME—SAME.
It is the settled rule of the Office that it is the date of the publication of the foreign patent and not the date of the application therefor that controls in interference proceedings. (*De Ferranti* v. *Westinghouse, Jr.*, 68 O. G., 457; *Appert* v. *Parker*, 74 O. G., 1867.) This is also the rule of the courts. (*Am. Bell Telephone Co.* v. *Cushman et al.*, 65 O. G., 135.) The case of *Hawkes* v. *E. H. Godshalk Company* (79 O. G., 510) seems to hold the contrary; but the weight of authority is clearly as first above stated. [Id.

22. PROVING DATES—REFRESHING MEMORY BY DOCUMENTS—PRODUCING DOCUMENTS.
It is not necessary that documents from which a witness may have refreshed his memory as to dates be produced at the examination; but the failure to do so would often cause the facts to be regarded as of little weight. When produced and used to assist the memory, they need not be offered as evidence, and in a majority of instances they would be inadmissible if offered. [*McCormick *v.* Cleal, 1514.

23. DILIGENCE—PRIORITY.
Cleal's conception and reduction to practice is the date of his application, July 6, 1894. McCormick prepared two applications for patent in February, 1894. One he filed on March 5, 1894, for what is called "machine No. 4." The other application, the one involved in this interference, under which "machine No. 3" had been begun but laid aside for No. 4, was not filed until October 6, 1894. On April 8, 1894, he began "machine No. 5," which contained the locking mechanism of No. 4 and differs from the mechanism of the issue merely in the time of the operation of the two sets of keys, in the issue the department-key being first pressed and the cash-key thereby unlocked, while in machines Nos. 4 and 5 the cash-keys are first pressed and the department-keys thereby unlocked. *Held* that machine No. 3 fell short of being a reduction to practice; but as, judging by McCormick's actions, he neither saw the superiority of one mode of operation over the other at the time he was working on the machines nor apprehended that there was a substantial difference between the functions of the mechanism in merely reversing the time of the locking action upon the distinct sets of keys, the locking device being the important improvement, and he appreciating its value, though he may have been mistaken as to the most advantageous mode of its operation and may also for a time have supposed that it was the same invention when operated reversely, also *Held* that under such circumstances what McCormick was doing during the eight months from the date of preparing his application to the filing of it in the Patent Office was not unreasonable delay, and priority awarded to him over Cleal. [*Id.

24. RESTRAINING AN EXAMINER FROM DECLARING AN INTERFERENCE—JURISDICTION OF THE COMMISSIONER.
The Commissioner is warranted in taking jurisdiction of and granting a petition to restrain an Examiner from declaring an interference when it clearly appears that the Examiner's intended action is contrary to the practice of the Office as indicated by the decisions of the Commissioner. (Citing *ex parte Baker*, 64 MS. Dec., 71.)
[*Ex parte* Whitney, 1630.

25. PATENT AND APPLICATION—PROTECTING RIGHTS OF PATENTEE.
The Office is not bound to declare an interference between a patent and an application in order to give the patentee the opportunity of contesting the grant of a patent to the applicant because in its judgment the patentee's rights would be infringed or abridged by granting a patent on a pending application. [Id.

26. MAKING THE INTERFERENCE ISSUE.
The Examiner should not make an issue for the purpose of bringing about an interference. The applicants should make the issues by their claims. If an Examiner desires the issue to be different, he should arrive at that result by requiring the claims to be amended by the applicants. (Citing *Hammond* v. *Hart*, 83 O. G., 743.) [Id.

27. SAME—PATENTEE AND APPLICANT.
The Office has no control over a patentee to require him to amend his claims. Unless an applicant make substantially the same claim as the patentee no interference can be declared. [Id.

28. SAME—SAME—CONSTRUING CLAIMS OF THE PATENT.
For the purpose of declaring an interference the claims of a patent must be taken as they read. The Office has no authority to say that any of the limitations contained in the claims of a patent are immaterial and unessential. Presumably the patentee did not put any unnecessary limitations in his claims. [Id.

29. DISSOLUTION—PATENTABILITY OF CLAIMS OVER THE ISSUE—SUGGESTION BY THE EXAMINER AS TO REJECTION OF CLAIMS INVOLVED IN THE ISSUE.
Where the issue of the interference was Wolfenden's third claim and involved his first, second, and fourth claims, *Held* that as the issue is not the first, second, and fourth claims they should be dropped from the interference, and if the Examiner is of the opinion that there is no patentable invention in these claims over the subject-matter of the issue it would be better practice for him to notify Wolfenden that in the event of the interference being determined adversely to him such claims would stand rejected as involving no patentable invention. [Wolfenden *v.* Price, 1601.

30. SAME—CLAIMS INCLUDING IMMATERIAL LIMITATIONS—INTERFERENCE IN FACT.
Where Price's claim involved in the issue, which is Wolfenden's third claim, includes certain limitations which are not stated in Wolfenden's claim and Wolfenden's claim contains a limitation not found in Price's claim, *Held* that notwithstanding it is urged that these differences are immaterial and may be disregarded there is no interference in fact. [Id.

31. SAME—DISREGARDING LIMITATIONS IN CLAIM.
The Patent Office is no more competent than the courts to say in declaring an interference that an element which an applicant or a patentee has placed in his claim is an immaterial one. [Id.

32. SAME—SAME.
An interference is not sufficiently clear and definite which requires that certain limitations in the claims of one party should be held to be immaterial and that other limitations should be read into the claims of either one or the other party to the proposed interference in order to make them the issue of the interference. [Id.

33. SAME—SAME—SUGGESTION OF CLAIM BY EXAMINER.
A claim may be patentable in the opinion of the Examiner which does not contain certain limitations, and it is within his province, when he believes it is necessary for him to declare an interference, to indicate to the parties a patentable claim as the issue of the interference which shall omit immaterial elements and thereby make it unnecessary for the Office to hold that the issue and the claims are different from what they read. [Id.

34. SAME—SAME.
It is not necessary that identical language should be employed in the claims of every party to the interference; but when different words are used they must mean and refer to the same thing. [Id.

35. SAME—INTENT OF HAMMOND *v.* HART.
The case of *Hammond* v. *Hart* (83 O. G., 743) was intended to bring about a practice in the Office that should result in making the issue of an interference both definite and clear, and to that end to cause the parties to the proposed interference to claim substantially the same patentable invention, so as to obviate the many motions and appeals that have unnecessarily arisen in the Office. [Id.

36. TESTIMONY—COMPETENCY OF INVENTOR TO TESTIFY IN HIS OWN BEHALF.
Winslow took no testimony to prove his case, but rested on his record date. Austin testified that he disclosed the invention to Winslow, who was then in his employ and who made no claim to the invention. Austin's testimony is uncorroborated. *Held* that in interference proceedings where the fact is one that is not solely within the personal knowledge of the party to the interference his testimony cannot be ignored simply because it is uncorroborated and that Austin is a competent witness to testify as to a claimed disclosure of the subject-matter of the interference to his adversary.
[Austin *v.* Winslow, 1991.

37. SAME—SAME—BURDEN OF PROOF.
Held, further, that when Austin testified that he had disclosed the invention to Winslow the burden of proof was shifted and Winslow could no longer safely rely upon his record date. Where a claimed fact must be equally within the knowledge of two parties and one asserts it and the other fails to deny it, the latter cannot complain if the asserted fact is found by the tribunal called upon to pass on it to be true. [Id.

38. THE QUESTION TO BE CONSIDERED IN INTERFERENCE PROCEEDINGS—ESTOPPEL—REISSUE.
Where Austin contended that Winslow is estopped from asserting his right to the subject-matter of the issue, as claims covering the matter were presented in an original application and after rejection on references were canceled, *Held* that while it is well settled that claims contained in the reissue patent which were asserted in the original application, but were rejected and canceled, will not be sustained by the courts, and therefore should not be allowed by the Office, yet this question is one between the public and the applicant making the claims. This question of estoppel has no bearing upon the question of priority, the question for consideration in an interference proceeding, and therefore will not be considered here. (*Hoeveler et al.* v. *Verner et al.*, 43 MS. Dec., 444, 448.) [Id.

(See Designs, 6, 7, 8, 9, 14.)

MOTION TO DISSOLVE INTERFERENCE.

See Appeal to the Examiners-in-Chief, 5, 6, 7, 8; Interference, 3.)

1. NATURE OF SUCH MOTION.
A motion to dissolve an interference on the ground of non-patentability is in the nature of a suggestion to the Office of certain facts which are believed to negative patentability or to show that one of the parties is not entitled to make the claim. It is not a contest in which testimony can be received or anything presented for consideration which is not actually or presumably within the knowledge of the Examiner in the *ex parte* treatment of the applications of the respective parties prior to the declaration of the interference.
[Painter *v.* Hall, 1803.

2. SAME.
The motion is brought not on the ground that the interest of the party bringing it would be adversely affected by the issuance of a patent for the subject-matter to his opponent, but for the reason that it appears to the moving party that the Office was in error in finding the claim patentable. [Id.

3. SAME.
The fact that the interest of the moving party may be adversely affected by the issuance of the patent for the subject-matter to his opponent does not in itself entitle him or any other person to be heard, nor is it a fact to be considered in the determination of the question by the Examiner. The question is the same question that was considered before the declaration of the interference—a question of patentability. [Id.

4. EXAMINER'S ACTION AS TO PATENTABILITY CONCLUSIVE.
If the Examiner, upon hearing the motion to dissolve, adheres to his decision that the claims are patentable and patentable to the respective parties, the contest as to these questions is concluded in so far as it is preliminary to the question of priority. [Id.

5. NON-PATENTABILITY—*EX PARTE* APPEAL.
Should the Examiner, upon the motion to dissolve, decide that the claims are not patentable to one of the parties, a decision which is as to one or both of the parties equivalent to a final rejection, the full course of appeal is open to the party whose claim is affected by such decision, and such appeal is *ex parte*. [Id.

6. APPEALS—"MAY BE HEARD INTER PARTES" RULE 124 CONSTRUED.
The words "may be heard *inter partes*" in Rule 124 permit the adverse party to an interference proceeding, on a motion to dissolve on the ground of non-patentability or no right to make the claim, to be heard on appeal, if considered advisable by the Examiners-in-Chief. The adverse party, however, is not heard as a matter of right, but as a matter of courtesy only. [Id.

NEW APPLICATION.

(See Abandoned Applications; Applications, 5, 6.)

OATH.

(See Applications, 2, 3; Interference, 4.)

PARTICULAR PATENTS.

1. RAWSON — PRODUCTION OF INCANDESCENT MANTLES — No. 407,963—PIONEER INVENTION—INFRINGEMENT.
Claim 1 of Letters Patent No. 407,963, granted July 30, 1889, to Frederick L. and William S. Rawson, for the production of incandescent mantles, consisting in coating the complete mantle with paraffin or other suitable material, construed, *Held* to be for a pioneer invention and infringed by a process consisting in coating with a solution of collodion.
[*Welsbach Light Company *v.* Sunlight Incandescent Gas Lamp Company, 505.

2. SCRIBNER—MULTIPLE SWITCHBOARDS—No. 330,061.
Claims 2 and 4 of Letters Patent No. 330,061, granted November 10, 1885, to Charles E. Scribner, for multiple switchboards for telephone-exchanges, construed in connection with the prior art and *Held* valid and infringed.
[*Western Electric Company *v.* Home Telephone Company *et al.*, 443.

3. SAME—SAME—SAME.
Claim 6 of Letters Patent No. 330,061, granted November 10, 1885, to Charles E. Scribner, for multiple switchboards for telephone-exchanges, construed and *Held* not infringed. [*Id.

4. VAN DEPOELE—ELECTRIC RAILWAYS, TRAVELING CONTACT FOR—No. 495,443—VOID—PREVIOUSLY PATENTED TO SAME INVENTOR.
Claims 2 and 4 of Letters Patent No. 495,443, for a traveling contact for electric railways, granted April 11, 1893, to the administrators of Charles A. Van Depoele, construed and *Held* to be void, as they are for the same invention which has been previously patented to the same inventor in Letters Patent No. 434,695.
[*Thomson-Houston Electric Company *v.* Union Railway Company *et al.*, 597.

5. WESTINGHOUSE, JR.—FLUID-PRESSURE AUTOMATIC-BRAKE MECHANISM—No. 360,070—NOT INFRINGED.
Claims 1, 2, and 4 of Letters Patent No. 360,070, granted March 29, 1887, to George Westinghouse, Jr., for a fluid-pressure automatic-brake mechanism, construed and *Held* not infringed.
[*Boyden Power Brake Company *et al. v.* Westinghouse *et al.*, 1067.

6. SAME—CONSTRUCTION OF CLAIM 2—FUNCTION OF MACHINE.
Claim 2 of Letters Patent No. 360,070, which reads "in a brake mechanism, the combination of a main air-pipe, an auxiliary reservoir, a brake-cylinder, and a triple valve having a piston, whose preliminary traverse admits air from the auxiliary reservoir to the brake-cylinder, and which by a further traverse admits air directly from the main air-pipe to the brake-cylinder, substantially as set forth," is, to a certain extent, for a function—viz., the admission of air directly from the train-pipe to the brake-cylinder—and is only limited to such function when performed by the further traverse of the piston of the triple valve. If it be not susceptible of the interpretation that it is simply for a function, then the performance of that function must be limited to the particular means described in the specification for the admission of air from the train-pipe to the brake-cylinder. [*Id.

7. SAME—SAME—SAME.
If this claim be interpreted simply as a claim for the function of admitting air to the brake-cylinder directly from the train-pipe, it is open to the objection that the mere function of a machine cannot be patented. (Citing *Corning* v. *Burden*, 15 How., 252; *Risdon Locomotive Works* v. *Medart*, 71 O. G., 751; 158 U. S., 68, and other cases.) [*Id.

PATENTABILITY.

(See Interference, 15, 16; Invention; Particular Patents, 7; Process.)

PERSONAL REPRESENTATIVES.

(See Caveats, 1, 2.)

PETITION.

(See Applications, 2, 3.)

PIONEER INVENTION.

(See Infringement, 2; Particular Patents, 1.)

DEFINED.
The word "pioneer" is commonly understood to denote a patent covering a function never before performed, a wholly novel device, or one of such novelty and importance as to mark a distinct step in the progress of the art, as distinguished from a mere improvement or perfection of what had gone before.
[*Boyden Power Brake Company *et al. v.* Westinghouse *et al.*, 1067.

PRIORITY OF INVENTION.

(See Applications, 6; Interference, 1, 2, 3, 10, 19, 20, 21, 23, 38.)

PROCESS.

(See Division of Application, 1, 2.)

1. PATENTABILITY—CHEMICAL ACTION.
Risdon Locomotive Works v. *Medart* and other cases assume, although they do not expressly decide, that a process to be patentable must involve a chemical or other similar elemental action, and it may be still regarded as an open question whether the patentability of processes extends beyond this class of inventions.
[*Boyden Power Brake Company *et al. v.* Westinghouse *et al.*, 1067.

2. SAME—FUNCTION OF MACHINE.
Where a process is simply the function or operative effect of a machine, *Corning* v. *Burden*, *Risdon Locomotive Works* v. *Medart*, and other cases are conclusive against its patentability; but where it is one which, though ordinarily and most successfully performed by machinery, may also be performed by simple manipulation—such, for instance, as the folding of a paper in a peculiar way for the manufacture of paper bags or a new method of weaving a hammock—there are cases to the effect that such a process is patentable, though none of the powers of nature be involved to aid in producing the result. (*Eastern Paper Bag Co* v. *Standard Paper Bag Co.*, 41 O. G., 231; 30 Fed. Rep., 63; *Union Paper Bag Machine Co.* v. *Waterbury*, 39 Fb., 359; *Travers* v. *Am. Cordage Co.*, 70 O. G., 277; 64 Fed. Rep., 771.) [*Id.

PUBLICATION OF FOREIGN PATENT.

(See Interference, 21.)

REDUCTION TO PRACTICE.

(See Diligence; Interference, 1, 2, 20, 23.)

DRAWINGS.
Perfected drawings showing an invention cannot be regarded as a reduction to practice of the invention.
[*McCormick *v.* Cleal, 1514.

REFUNDMENT OF FEES.

(See Applications, 4.)

REHEARING.

(See Appeal to the Court of Appeals of the District of Columbia, 3, 4; Reopening of Rejected Cases.)

REISSUES.

(See Interference, 38; Suits Under Section 4915, Revised Statutes.)

1. ABANDONMENT OF INVENTION—SCOPE OF CLAIM.
Where the claim sought by reissue was not as broad as the claim made in the original application and canceled, *Held* that this is of no consequence where the reissue claim was included in the original claim. It is well-settled law that a reissue cannot be allowed for the restoration of claims once rejected and withdrawn. [*Denton *v.* Commissioner of Patents, 1847.

2. LIMITING SCOPE OF CLAIM—ABANDONMENT.
Where an applicant for a reissue had amended and limited an original claim to a greater extent than was necessary, *Held* that such limitation may have been a mistake of judgment, but it was certainly an abandonment of all that was contained in the original claim and which was not contained in the subsequent amendment. There can be no middle ground or retrogression to take back part of what has been abandoned any more than to take back the whole. [*Id.

3. DELAY IN APPLYING FOR—INADVERTENCE, ACCIDENT, OR MISTAKE.
The original patent was issued on September 15, 1885, and an application for reissue was not filed in the Patent Office until November 6, 1888. *Held* that the application for reissue of the patent was not made within a reasonable time and that there was no sufficient evidence of inadvertence, accident, or mistake to entitle appellant to a reissue of the patent under the statute, according to the rule laid down in the case of *Topliff* v. *Topliff*, (59 O. G., 1297; 145 U. S., 156.)
[*Messinger *v.* Commissioner of Patents, 1905.

4. DILIGENCE IN DISCOVERING MISTAKE IN ORIGINAL PATENT, IN APPLYING FOR REISSUE, AND IN THE PROSECUTION OF THE APPLICATION.
From the well-settled principles of the law of reissues, as expressed by the Supreme Court, not only must the application for reissue be founded upon the same invention as that covered by the original patent and as shown by the original specification and claims, but there must be due diligence shown in discovering the mistake or inadvertence and in the application for reissue and in the prosecution of such application. [*Id.

REJECTED CLAIMS.

(See Interference, 6, 29; Reissues, 1, 2; Reopening of Rejected Cases.)

REOPENING OF REJECTED CASES.

JURISDICTION—EXAMINERS-IN-CHIEF—PRIMARY EXAMINER—APPEAL.
Where the Examiners-in-Chief refused to consider claims rejected by the Primary Examiner and appealed to them on the ground that the Examiner had no authority to reopen the case after a decision by the Commissioner on the merits, and therefore that the Examiners-in-Chief are without jurisdiction to consider the claims rejected by the Examiner, *Held* that the record shows that the case was reopened by the Assistant Commissioner under Rule 168 and when so reopened it was reopened for all purposes—for the presentation of such claims as the applicant saw fit to offer and for consideration and examination by the Examiner de novo, just as was done. The Examiner did not exceed his authority, but acted within the practice and clear intent of the Assistant Commissioner's decision. The Examiner having the second time rejected certain claims, and appeal having been taken to the Examiners-in-Chief, the case was within their jurisdiction, and they should have considered the appealed claims on their merits.
[*Ex parte* Lynch and Hough, 1909.

SIGNATURES.

(See Applications, 2, 3, 4; Drawings.)

SPECIFICATIONS.

(See Applications, 2, 3, 4.)

SPECIFIC CLAIMS.

(See Interference, 7, 13, 14, 17.)

SUITS UNDER SECTION 4915, REVISED STATUTES.

1. BILL UNDER SECTION 4915, REVISED STATUTES—BRIGGS—ICE-PLANER—REISSUE—RIGHT TO A PATENT.
A bill in equity for a decree that John N. Briggs is entitled to a reissue of Letters Patent No. 397,397 in accordance with the provisions of Revised Statutes, section 4915, dismissed, as the question of patentability of the combination claimed had been substantially passed upon by the Circuit Court of Appeals. (60 Fed. Rep., 87.)
[*Briggs *v.* Butterworth, Commissioner of Patents, 159.

2. DOUBLE USE—PATENTABILITY—POTTS *v.* CREAGER CONSTRUED.
It is now settled that *Potts* v. *Creager* (70 O. G., 494; 155 U. S., 597) did not announce any new doctrine or modify the existing rules of law. The same principle had already been stated and applied in *Blake* v. *City of San Francisco*, (31 O. G., 380; 113 U. S., 679;) *Pa. R. R. Co.* v. *Locomotive Co.*, (37 O. G., 307; 110 U. S., 490;) *Aron* v. *Railroad Co.*, (49 O. G., 1305; 132 U. S., 158,) and in *Briggs* v. *Central Ice Co.*, (54 Fed. Rep., 376, and 60 Fed. Rep., 87.) [*Id.

SUPREME COURT OF THE UNITED STATES.

TECHNICAL TERMS.

(See Construction of Specifications and Patents; Pioneer Invention.)

TESTIMONY.

(See Interference, 36, 37.)

TRADE-MARKS.

1. "PURITY"—OLEOMARGARIN.
The word "Purity" refused registration as a trade-mark for oleomargarin as it belongs to a class of words which are descriptive or advertising in character and are not registrable as trade-marks.
[*Ex parte* Capital City Dairy Company, 295.

2. SAME—SUGGESTIVE MEANING—DECEPTION.
While the word "Purity" is not an adjective in form and may not be commonly employed to describe a quality, nevertheless it cannot be successfully denied that it has a suggestive meaning. If the word is used in a fanciful sense, as contended by applicant's counsel, then it certainly has a tendency to deceive the ordinary buyer. [Id.

3. CLASSES OF GOODS—SEPARATE REGISTRATION.
The Office is not warranted in requiring that a trade-mark be separately registered for each class of goods with which it is used in order to conform to the Office classification.
[*Ex parte* Clark-Jewell-Wells Co., 915.

4. SAME—LENGTH OF USE ON DIFFERENT GOODS.
Where a trade-mark used on several classes of goods is covered by a single registration, the applicant should state for each class of goods the length of time the trade-mark has been used for that class. [Id.

5. "BETTER THAN MOTHER'S"—MINCE-MEAT.
The phrase "Better than Mother's" refused registration as a trade-mark for mince-meat, as it expresses quality.
[*Ex parte* Ervin A. Rice Company, 1207.

6. WORDS EXPRESSING QUALITY.
A valid trade-mark cannot be predicated upon words or phrases expressing quality. No one can appropriate for his exclusive use words and phrases that all may use. Any one dealing in mince-meat can declare, if the statement be true, that his product is better than any one else's, be that other "mother," "grandmother," or "aunt." [Id.

7. "PEACH GREENVILLE"—TOBACCO.
The words "Peach Greenville" refused registration as a trade-mark for plug-tobacco on the word "Peach," previously registered, as it is not a safe practice to permit the registration of a compound trade-mark, one of the distinguishing features of which has already been registered, as purchasers using ordinary caution might easily be deceived.
[*Ex parte* Meriwether & Company, 1512.

8. REGISTERING DECEPTIVE TRADE-MARKS CONDEMNED.
The Patent Office should not give its stamp of approval to a class of trade-marks the use of which has a tendency to mislead or deceive the public, and thus take a position antagonistic to well-settled rules of law. [Id.

9. "YUCATAN"—GEOGRAPHICAL WORD.
The word "Yucatan" is geographical and cannot be registered as a trade-mark for leather and leather goods. Any one importing hides from Yucatan or purchasing hides exported from Yucatan would be entitled to call or mark skins and tanned leather having such origin by the name "Yucatan."
[*Ex parte* Weil, 1908.

10. "YUCATAN" WITHIN A DESCRIBED SQUARE FIGURE.
As "Yucatan" taken by itself is not registrable, it is not made registrable by placing it within a square figure, as the essential feature of the mark is the word "Yucatan." [Id.

11. ESSENTIAL FEATURES OF A MARK.
The essential features of a trade-mark are those which serve in whole or in part to distinguish the goods of the party by whom such mark is adopted. [Id.

12. "GILSON" — SURNAME — SALIENT FEATURE OF CORPORATE NAME.
The word "Gilson," being the salient feature of applicant's corporate name, refused registration as a trade-mark under the general rule that an ordinary surname cannot be appropriated as a trade-mark by any one person against others of the same name who are using it for a legitimate purpose.
[*Ex parte* F. H. Gilson Company, 1902.

13. SAME—SAME—NAME OF PATENTED DEVICE.
The word "Gilson," being the name of a patented album known as the "Gilson Album," refused registration as a trade-mark for photograph-albums and photographic exposure-tables on the ground that the name of an inventor which has become the generic name of the thing patented passes to the public when the monopoly created by the patent expires. [Id.

USE AND SALE OF IMPORTED ARTICLES.

(See Injunction.)

USE AND SALE OF PATENTED ARTICLES.

1. SALE ABROAD BY PATENTEE—RESTRICTIONS AS TO USE.
Even if a party who buys a patented article without restriction in a foreign country from the owner of the United States patent has the right to use and vend it in this country he has no such right if he bought it with the express condition that it be not imported into the United States.
[*Dickerson v. Tinling, 1663.

2. CONDITIONAL SALE—RIGHTS OF PATENTEE.
The patentee has the same right and power to sell the patented article upon conditions or with restrictions that he has to sell it at all. [*Id.

Bardsley, Henry, Palmyra, N. J. Machine for seeding raisins	606,965	June 28	2301	532 533	88	1847
Barker, Alfred K., Boonton, N. J. Apparatus for making chilled-iron castings	603,714	Apr. 19	1950	443	88	400
Barker, Gerald, London, England. Velocipede driving-gear	601,894	Apr. 5	398	80	88	72
Barker, Wells T., *et al.* (See Shields, William E., assignor.)	604,691	May 24	2695	616 617	88	1168
Barkey, John L., Toronto, Canada. Can-labeling machine						
Barnard, Calvin B., *et al.* (See Albury, Frederick L., assignor.)						
Barnard & Leas Manufacturing Company. (See Cornwall, John B., assignor.)						
Barnard, William, Philadelphia, Pa. Envelop-fastener	606,498	June 28	2715	625	88	1926
Barneck, Alexander. (See Stilwell and Barneck.)						
Barnes, Amos H., Reno, Nev. Lock	605,466	June 14	758	174	88	1519
Barnes, H. E. W. (See Swartz, Robert E., assignor.)	605,771	June 14	1295	299 300	88	1619
Barnes, Joshua F., assignor of one-half to H. B. Geell, Shannon, Ill. Gate	605,285	June 7	434	98	88	1434
Barney, Everett H., Springfield, Mass. Hockey-game skate	602,806	Apr. 12	1078	236	88	217
Baron, Alfred L., and J. F. Haffey, Tiffin, Ohio; said Haffey assignor to said Baron. Lantern						
Baron, Straus & Co. (See Baron and Ingalls, assignors.)						
Baron, Theodore S., and W. A. Ingalls, assignors to Baron, Straus & Co., Brooklyn, N. Y. Ribbed-knit pile fabric	603,164	Apr. 26	2723	619	88	563
Barr, Archibald, Glasgow, Scotland, and W. Stroud, Leeds, England. Apparatus for producing high vacuums	604,486	May 24	2358	530 531	88	1121
Barr, John C., Chicago, Ill. Locking device for bicycles	604,453	May 24	2358	507	88	1107
Barrall, Paul. (See Curran, Peter, assignor.)	605,456	June 7	747	170	88	1496
Barrath, Edward, Chicago, Ill. Key-opening can	605,457	June 7	748	170	88	1496
Barrath, Edward, Chicago, Ill. Key-opening can						
Barrett, Halsey M. (See Stiles, Henry M., assignor.)	601,994	Apr. 5	707	150	88	128
Barrett, John R., Chicago, Ill. Temporary binder	602,819	Apr. 26	2143	486	88	451
Barrick, William C., New Midway, Md. Wire-fence stay	604,512	May 24	2379	541	88	1136
Barrie, Robert, Philadelphia, Pa. Tubular-fabric-turning machine	606,499	June 28	2716	625 626	88	1926
Barro, Ferdinand. (See Peraglie and Barro.)						
Barron, George B., Easton, Pa. Switch-operating device	604,014	May 17	1444	323	88	981
Barrow, Kenneth. (See Dunning and Barrow.)						
Barrows, Elvin S., Clarendon, Vt. Hoof-spreading horseshoe	606,500	June 28	2718	626	88	1926
Barrows, George S. (See Kellner and Barrows.)						
Barry & Co., D. J. (See Bellanger, Frank S., assignor.)	605,772	June 14	1296	300	88	1619
Barry, Nicholas, Jr., Muscatine, Iowa. Fire-hydrant	605,691	June 14	1168	268 269	88	1504
Barthelemy, Aristide L. (See Barthelemy, Louis J. and A. L.)	603,895	May 10	1174	265	88	845
Barthelemy, Louis J. and A. L., New Orleans, La. Sugar-drier	605,374	June 7	612	136	88	1408
Bartholomew, George R., Ridge, Pa. Pneumatic switch-throwing mechanism	606,403	June 28	2551	591	88	1899
Bartlett, Charles H., Bristol, England. Steelyard	602,602	Apr. 19	1915	436	88	308
Bartlett, Granville, Lexington, Ky. Trace-holder	603,586	Apr. 19	1633	372 373	88	340
Barton, James G. (See Myers, Charles E., assignor.)	602,422	Apr. 19	1429	325	88	304
Barus, Frederick S., Jersey City, N. J. Machine for forming paper tubes	602,312	May 3	115	27	88	634
Basch, David, New York, N. Y. Toe-clip for bicycles	602,930	Apr. 26	2295	533	88	459
Bassett, Fred H., Waterbury, Conn. Bicycle	604,015	May 17	1446	324	88	932
Batcheller, Birney C., Philadelphia, Pa. Apparatus for locating obstructions in tubes	605,841	June 21	1462	335	88	1668
Bate, Fenimore C., Cleveland, Ohio. Show-case	605,842	June 21	1467	336 337	88	1669
Bate, William S., Brooklyn, N. Y. Rotary engine	604,956	May 31	3141	732	88	1924
Bates, Charles F. (See Borton and Bates.)	605,598	June 14	972	235	88	1533
Bates, Lindon W., Chicago, Ill. Hydraulic dredge	602,981	Apr. 26	2336	533	88	429
Bates, Lindon W., Chicago, Ill. Method of and apparatus for firing pneumatic ordnance	602,279	Apr. 12	1208	264	88	242
Bates, Lindon W., Chicago, Ill. Electrically-heated charge for cartridges or shells						
Bates, Peter S., assignor of three-fourths to E. W. Loucks, York, Pa. Letter-box						
Bates, Solomon W., Portland, Me. Machine for making match-cards						
Batey, John, Dublin, Ireland. Manufacture of wire spokes for wheels						
Battersby, James, Philadelphia, Pa. Bicycle retainer and lock						
Batton, Richard H. (See Gregory and Batton.)						
Bauer, Carl E., assignor to Simplex Railway Appliance Company, Chicago, Ill. Car-bolster	604,555	May 24	2457	559	88	1141
Bauer, Carl E., assignor to Simplex Railway Appliance Company, Chicago, Ill. Metal bolster	604,556	May 24	2458	559	88	1142
Bauer & Cie. (See Bauer and Busch, assignors.)						
Bauer, Felix, Berlin, and A. Busch, Elberfeld, assignors to Bauer & Cie., Berlin, Germany. Albumen preparation soluble in water	601,995	Apr. 5	710	.....	88	134

INDEX OF PATENTS ISSUED FROM THE

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Bauer, Peter, Cologne-Ehrenfeld, assignor to Lebach & Company, Gesellschaft mit Beschrinkter Haftung, Cologne, Germany. Garbage-wagon	604,575	May 24	2496	566	88	1150
Bauer, William F., Springfield, Ohio, assignor to Warder, Bushnell & Glessner Company, Springfield, Ohio, and Chicago, Ill. Roller-bearing	606,809	May 10	1145	256	88	689
Bauer, William M., Chicago, Ill. Piano	604,166	May 17	1718	387	88	963
Baugher Joseph T. (See Litchfield and Baugher.)	602,715	Apr. 19	1958	443	88	400
Baughn, Nathan, Buffington, Mo. Nut-lock	604,557	May 24	2459	559	88	1142
Baum, Heinrich, Dudweiler, Germany. Safety device for elevators	11,668	May 17	2085	467	88	1055
Bausch, George, Syracuse, N. Y. Spectacles. (Reissue)	606,188	June 28	2122	487	88	1809
Baxter, Berry A., *et al.* (See Hurst, Willis T., assignor.)						
Baxter, Charles, Waukesha, Wis. Wire-fence spacer	606,206	June 28	2308	533	88	1847
Baxter, Charles, and A. Schrader, Waukesha, Wis.; said Schrader assignor to said Baxter. Fence-stay-weaving device						
Baxter, Edwin D., *et al.* (See Hurst, Willis T., assignor.)						
Baxter, Emmett C., *et al.* (See Hurst, Willis T., assignor.)						
Bay State Shoe Machinery Company. (See Bertrand, Joseph E., assignor.)	602,259	Apr. 12	1158	263	88	282
Beach, Henry, London, England. Tire-lever	604,359	May 24	2004	499	88	1076
Beadle, Clayton. (See Cross, Bevan, and Beadle.)	602,922	Apr. 26	2340	534	88	490
Beam, Waldo P., Beamington, Ill. Vessel-closure	605,999	June 21	1760	404	88	1723
Beamisderfer, Joseph A., Syner, Pa. Wire-fence tool	604,873	May 31	2010	501	88	1208
Bean, Ivory, Brookline, Mass. Valve						
Bean, John, Los Gatos, Cal., and R. Bean, Hudson, Mich. Spraying-nozzle						
Bean, Roscoe. (See Bean, John and R.)						
Bear, J. Shuey, *et al.* (See White, Charles S., assignor.)	605,843	June 21	1471	337	88	1669
Bear, John W., Udell, Iowa. Non-refillable bottle	601,824	Apr. 5	2	1	88	3
Beard, George M., Angola, Ind. Adjustable handle-bar for bicycles	602,049	Apr. 12	799	178	88	168
Beard, George M., Angola, Ind. Bicycle crank-shaft	604,513	May 24	2360	543	88	1136
Beasley, Maria E., Chicago, Ill. Means for preventing derailment of railway-cars	605,068	June 7	2	1	88	1368
Beasley, William F., Baltimore, Md. Bag or pouch						
Beatty Felting Co. (See Roce, Edward, assignor)	604,292	May 17	1958	437	88	1029
Beatty, James S., Simpsonville, Ky. Washing-machine	605,467	June 14	759	174	88	1519
Beatty, Orin C., Cleveland, Ohio. Elevating mechanism	601,929	Apr. 5	598	121	88	110
Beatty, Robert. Tarentum, Pa. Wire-splicing pliers	603,463	May 3	396	89	88	977
Beaumel, David W., Brooklyn, N. Y. Fountain-pen						
Beaver, James A. (See Rogers, William, assignor.)	604,015	May 17	1447	324	88	902
Beavers, Porter, Easonville, Ala. Can-opener						
Bebout, Freeman, and J. H. Brandon, assignors of one-third to J. C. Deidrick, East Liverpool, Ohio. Shaft-hanger	606,327	June 28	2410	559	88	1866
Bechman, Henry F., assignor to Duplex Printing Press Company, Battle Creek, Mich.) Printing-press	604,293	May 17	1953	439	88	1029
Bechtel, Henry, and L. Fritz, Philadelphia, Pa. Signal for steam-boilers	601,909	Apr. 5	131	26	88	26
Bechtold, William S., Newark, N. J. Cuff-button	603,306	May 3	302	58	88	650
Beck, Charles E., Baltimore, Md. Luggage-carrier for bicycles	602,018	Apr. 26	2474	561	88	514
Beck, Edward, Chicago, Ill. Means for hanging and guiding sashes	605,069	June 7	4	1,2	88	1353
Beck, Milton, Racine, Wis. Gas-engine	602,880	Apr. 26	2144	486	88	451
Becker, Frederick W., Newark, N. J. Key-holder	603,947	May 3	3	2	88	603
Becker, George. (See Becker, John and G.)	602,151	Apr. 12	962	216	88	197
Becker, John and G., Hays Mill, Pa. Dumping-wagon	605,070	June 7	8	2,3	88	1354
Becker, John E. M., New York, assignor to E. M. Dunton, Hollis, N. Y. Vehicle-wheel	603,464	May 3	396	89	88	676
Becker, John E. M., New York, assignor to E. M. Dunton, Hollis, N. Y. Faucet-bung	603,601	May 3	547	145	88	727
Beebe, Dillon, Newark, N. J. Engine	601,926	May 31	2101	718	88	1355
Beeman, William S., assignor of one-half to G. B. Rinehart, Ashland, Wis. Engine	606,501	June 28	2719	627	88	1989
Beers, Charles L., Scranton, Pa. Protective bank-check system	602,397	Apr. 12	1235	271	88	242
Beerstecher, Charles F., Centreville, Mich. Railway foot-guard						
Begins, Joseph, Lisbon, Me. Picker-stick						
Behring, Emil, Halle-on-the-Saale, assignor to Farbwerke, vormals Meister, Lucius & Brüning, Höchst-on-the-Main, Germany. Diphtheria antitoxin and making same	606,042	June 21	1868	.....	88	1741
Beittenmiller, Fredrich W. (See Rice and Beittenmiller.)						
Bélanger, Victor, assignor to J. Quincy, Boston, Mass. Mechanical movement for bicycles	605,844	June 21	1472	337	88	1670
Bélanger, Victor, assignor to J. Quincy, trustee, Boston, Mass. Change-speed mechanism	605,845	June 21	1475	338	88	1670
Bélanger, Victor, assignor to B. F. Weed, Boston, Mass. Mechanical movement	606,157	June 21	2070	476	88	1781
Bélanger, Victor, assignor to B. F. Weed, Boston, Mass. Mechanical movement	606,158	June 21	2073	476	88	1781
Belden, Eugene H., Horton, assignor of one-half to W. F. Cowham, Jackson City, Mich. Vessel for holding liquids	604,514	May 24	2361	542	88	1138
Bell, Carrie D., Nicholasville, Ky. Gate	606,508	June 28	2721	627	88	1989
Bell, Enos T. (See Forsyth and Bell.)	604,360	May 24	2005	499	88	1076
Bell, Frank M., assignor of one-half to W. Pollack, New York, N. Y. Safety device for elevators	604,361	May 24	2101	470	88	1077
Bell, Frank M., assignor of one-half to W. Pollack, New York, N. Y. Safety device for elevators				471		
Bell, Fred C., assignor to N. S. Paul, Cœur d'Alene, Idaho. Adjustable hanger for incandescent lights	601,980	Apr. 5	563	121	88	111
Bell, Robert J., *et al.* (See Finch, Edgar, assignor.)						
Bell Telephone Company of Missouri. (See Dean, William W., assignor.)						
Bell, Thomas, *et al.* (See Finch, Edgar, assignor.)						
Bellanger, Frank S., Waterbury, Conn., assignor to D. J. Barry & Co., New York, N. Y. Egg-beater	602,152	Apr. 12	962	216	88	197
Bellefeuille, Olivier, Montreal, Canada. Needle-guard for sewing-machines	606,100	Apr. 26	2230	505	88	541
Bellinger, Albert D., West Superior, Wis. Grain-spout	605,375	June 7	612	137	88	1499
Bellman, John J., and C. T. Rittenhouse, New York, N. Y. Electric transformer	605,194	June 7	246	56	88	1397
Bender, Fritz, assignor to Farbwerk Mühlheim, vormals A. Leonhardt & Co., Mühlheim, Germany. Blue dye	606,486	June 28	2688	.....	88	1910
Bender, Fritz, assignor to Farbwerk Mühlheim, vormals A. Leonhardt & Co., Mühlheim, Germany. Amidonaphtholdisulfo-acid and making same	606,487	June 28	2694	.....	88	1910
Bender, Fritz, assignor to Farbwerk Mühlheim, vormals A. Leonhardt & Co., Mühlheim, Germany. Blue-black dye	606,488	June 28	2695	.....	88	1910
Bender, Fritz, assignor to Farbwerk Mühlheim, vormals A. Leonhardt & Co., Mühlheim, Germany. Green disazo dye	606,489	June 28	2696	.....	88	1910
Benedict, Michael, Newark, N. J. Vending-machine	602,185	Apr. 12	1046	228	88	210
Benét, Laurence V., Paris, France. Gas-operated gun	606,115	June 21	2000	459	88	1768

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Bennett Combination Saw-Tool Company. (See Bennett, Richard, assignor.) (Reissue.)	602,716	Apr. 19	1958	444	88	409
Bennett, Joe, Coleman, Tex. Branding-chute	605,468	June 14	761	17	88	1519
Bennett, John, Paris, Me. Bonding and tying	604,927	May 31	2102	718	88	1396
Bennett, John T., Cape Town, Cape Colony. Apparatus for removing saccharin or other impurities from wine	11,661	Apr. 26	2356	651	88	687
Bennett, Richard, Newark, N. J., assignor to Bennett Combination Saw-Tool Company, of New York. Saw-tool. (Reissue)	606,440	June 28	2687	604	88	1910
Bennett, Thomas G., assignor to Winchester Repeating Arms Company, New Haven, Conn. Primer for ordnance	604,957	May 31	2148	722	88	1394
Bennett, Walter E., assignor to Hendrick Manufacturing Company, Limited, Carbondale, Pa. Elevator safety device	604,294	May 17	1830	410	88	1005
Bennik, Arie W. F., Apeldoirn, Netherlands. Tube-coupling	604,185	May 17	1764	397	88	908
Bennum, George W., Georgetown, Del. Submarine boat						
Benscoter, Frank J (See Gardner and Benscoter.)	605,846	June 21	1469	336	88	1671
Benseme, Charles, Tess Corners, Wis. Wagon-seat support	602,861	Apr. 26	2148	497	88	428
Benson, Charles E., Wallingford, Conn. Steam-pipe coupling for railway-cars	604,718	May 31	2750	629	88	1215
Benson, George N., Baltimore, Md. Hinge	605,071	June 7	9	3	88	1354
Benson, William A. S., London, England. Jug or vessel for containing liquids	603,945	May 3	9	3	88	603
Benson, William E., Kansas City, Mo. Bulletin-board						
Bentley & Gerwig Furniture Company. (See Baker, William H., assignor.)	605,990	June 21	1768	404	88	1724
Benton, Francis E., Stoughton, Mass. Hand-strap for cars	605,511	June 14	1868	317	88	1035
Benton, George E., Brooklyn, assignor of one-half to G. S. Elliott, New York, N. Y. Nut-lock	601,803	Apr. 5	399	69	88	68
Berg, John V., assignor to T. E. Brown, Chicago, Ill. Barrel-lining	604,566	May 24	2395	575	88	1156
Berger, Andrew, and H. Hildenbrand, New York, N. Y. Tapping apparatus						
Bergmann, Charles. (See Holtmann and Bergmann.)						
Bergmann, Sigmund, assignor to Sprague Electric Company, New York, N. Y. Lining for interior conduits	603,220	Apr. 26	2236	547	88	324
Bergström, Carl J., Finshyttan, Sweden. Dry-house for lumber, &c	603,527	May 10	1055	248	88	326
Bergstrom, John A., Passaic, N. J. Drawing instrument	605,698	June 14	1166	269	88	1505
Bergstrom, Louis. (See Miller, George, assignor.)						
Berksmeyer, Ferdinand, assignor of one-half to C. N. Cressman, Sellersville, Pa. Printing-press for cutting ribbons and counting same	605,173	June 7	205	51,88	88	1360
Bernard, John. (See Dierks, John.)	603,034	Apr. 26	2490	567	88	519
Berneis, Josef, Langenbielau, Germany. Bottle-stopper	603,035	Apr. 26	2500	567	88	519
Berneis, Josef, Langenbielau, Germany. Sealing device for bottle-stoppers	602,717	Apr. 19	1955	444	88	401
Bernhard, Louis, assignor to C. Lee, Bridgeport, Conn. Boiler-setting	605,535	June 14	861	203	88	1539
Bernhardt, Charles, assignor of one-half to J. Kaufmann, Philadelphia, Pa. Chute-wagon	604,294	May 17	1960	430	88	1031
Bernson, Charles W., assignor to Bernson Manufacturing Company, New York, N. Y. Chain adjustment for bicycles						
Bernson Manufacturing Company. (See Bernson, Charles W., assignor.)						
Bernson Manufacturing Company. (See Savage, George C., assignor.)	603,165	Apr. 26	2794		88	563
Bernstein, Alexander, Boston, Mass. Food product and making same	604,995	May 17	1961	430	88	1031
Bernstein, Charles, New York, N. Y. Fare-register-operating mechanism for cars						
Berry, William T. (See Montgomery and Berry.)						
Bersey, Walter C. (See Brougham and Bersey.)	603,936	Apr. 12	1326	273	88	248
Bertles, Andrew F., Doylestown, Pa. Gearing	603,329	May 3	196	45	88	629
Bertrand, Joseph E., Boston, Mass., assignor to Bay State Shoe Machinery Company, Portland, Me. Thread-waxing device for sewing-machines	603,949	May 3	11	3	88	603
Bessonette, Charles L., Waco, Tex. Baling-press	603,950	May 3	13	4	88	603
Bessonette, Charles L., Waco, Tex. Baling cotton	602,504	Apr. 19	1729	396	88	357
Best, Daniel, San Leandro, Cal. Oil-vapor traction-engine	603,718	Apr. 19	1956	444	88	401
Best, John A., Augusta, Ga. Index						
Bevan, Edward J. (See Cross, Bevan, and Beadle.)						
Bevan, Walter. (See Plush and Noblit, assignors.)	605,276	June 7	613	137	88	1469
Bevans, William H., Washington, D. C. Gun-carriage	605,277	June 7	617	139	88	1470
Bevans, William H., Washington, D. C. Field-mount for artillery						
Beyer, Emil O. (See Förster, Julius F., assignor.)	602,423	Apr. 19	1441	326	88	304
Besser, Henry, New Rochelle, N. Y. Railway signaling apparatus	603,798	Apr. 19	2071	467	88	428
Besser, Henry, New Rochelle, N. Y. Railway signaling system and apparatus	603,182	Apr. 26	2056	604	88	549
Bhise, Shanker A., Bombay, India. Weighing and measuring device	603,351	May 3	14	4	88	603
Bhise, Shanker A., Bombay, India. Advertising or sign lamp						
Bibb, Charles E. (See Eastwood, Bibb, and McClintock.)						
Bibb, John T., *et al.* (See Reid and MacDonnell, assignors.)						
Bibbens, Stewart S. (See Floyd, Theodore B., assignor.)	605,847	June 21	1461	329	88	1671
Biddinger, Albert W., Harrison, Ohio, assignor of one-half to B. G. Frederick, West Harrison, Ind. Railway-signal	602,020	Apr. 12	800	178	88	1394
Bierley, Henry A., Portsmouth, Ohio. Shaft-tug	604,956	May 31	2142	720	88	1394
Biesmeyer, Lorenz F., Wesgenhalle, Mo. Pessary	605,685	June 14	1048	241	88	1572
Billburgh, Edward, Grand Rapids, Mich. Awning						
Billing, Frederick. (See Sharp and Billing.)						
Billings, Phlavo L., *et al.* (See Gannoe, Thomas A., assignor.)	602,434	Apr. 19	1444	327	88	305
Billwiller, Johann S., Unterwegen, Switzerland. Burner for acetylene gas	603,866	May 10	1175	266	88	648
Bindemann, Harry O. F., Madrid, Spain. Electrical steering apparatus	602,513	Apr. 19	2132	479	88	499
Binder, Felix, assignor to Société de la Manufacture d'Indiennes, Emile Zundel, Moscow, Russia. Apparatus for singeing woven fabrics	601,695	Apr. 5	4	1	88	3
Bingham, Osmore A., Keene, N. H. Window-screen	606,286	June 28	2411	589	88	1865
Binkley, George K. (See Mengal, Binkley, and Gerber.)						
Binns, Franklin, Trenton, N. J. Nut-lock	601,700	Apr. 5	126	26	88	29
Binney, Harold, *et al.* (See Nealon, John J., assignor.)	605,942	June 7	341	78,79	88	1415
Birch, Thomas, Noblesville, Ind. Game apparatus						
Bird, Henry E., Buffalo, N. Y. Motor-carriage	605,773	June 14	1300	300	88	1880
Birkett, Edward J. (See Graham and Birkett.)						
Birkicht, George. (See Neeley, Maitland, and Birkicht.)						
Birks, William, Nottingham, England. Carving-machine	604,362	May 24	2104	472	88	1079
Birser, Charles P., assignor to Monarch Cycle Manufacturing Company, Chicago, Ill. Bicycle-brake	605,196	June 7	248	58	88	1397
Birtwisle, John, Manchester, England. Tool for making joints

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Bishop, Alice R., Atlanta, Ind. Table-cloth supporter	606,907	June 28	2308	538	68	1647
Bishop, James D., New York, N. Y. Apparatus for electrically working metals	604,187	May 17	1670	875	68	978
Bissell, Frank H. (See Neil and Bissell.)						
Bittinger, F. D. (See Gardner, George L., assignor.)						
Black & Clawson Company. (See Joslin and Schmidt, assignors.)						
Black, Clement B. (See Chambliss, Lee R., assignor.)						
Black, Jennie L., Freeport, Ohio. Compressed-meat can	601,981	Apr. 5	584	121, 122	68	111
Black, John L., assignor to Black Manufacturing Company, St. Louis, Mo. Valve	605,608	June 14	1168	200	68	1595
Black, John W., *et al.* (See Adcock, Arthur, assignor.)						
Black, Joseph A., Parnell, Iowa. Sash-fastener	602,051	Apr. 12	501	173	68	168
Black, Laura M., San Antonio, Cal. Dust-pan	603,008	Apr. 26	2454	558	68	510
Black Manufacturing Company. (See Black, John L., assignor.)						
Black, Walter, Chicago, Ill. Mortising-machine	605,774	June 14	1301	301	68	1620
Blackmore, Henry S., Mount Vernon, N. Y. Making sulfids	605,456	June 7	749	.....	68	1497
Blackmore, Henry S., Mount Vernon, N. Y. Making cyanids	605,694	June 14	1168	.....	68	1595
Blackmore, Henry S., Mount Vernon, N. Y., assignor to Pure Aluminium and Chemical Company, of West Virginia. Making aluminium sulfid	605,878	June 7	619	.....	68	1470
Blackmore, Henry S., Mount Vernon, N. Y., assignor to Pure Aluminium and Chemical Company, of West Virginia. Retort and making same	605,879	June 7	620	.....	68	1470
Blackmore, Henry S., Mount Vernon, N. Y., assignor to Pure Aluminium and Chemical Company, of West Virginia. Producing aluminium sulfid and reducing same to metallic state	605,880	June 7	621	.....	68	1470
Blackmore, Henry S., Mount Vernon, N. Y., assignor to Pure Aluminium and Chemical Company, of West Virginia. Making aluminium sulfid	605,812	June 14	1264	317	68	1695
Blackmore, Lawrence R., Newark, N. J. Printing-stamp	605,945	June 21	1671	368	68	1708
Blackmore, Sidney P., assignor of two-thirds to R. O. G. Drummond and E. J. Way, Johannesburg, South African Republic. Rock or like drill	602,668	Apr. 19	1916	426	68	395
Blair, George W., Pittsburg, Pa. Manufacture of glassware	604,959	May 31	3145	728	68	1294
Blaisdell, James M., Winthrop, Mass., assignor to Perfection Labeling Machine Company, of Maine. Paper-feeding machine	604,592	May 31	3085	697	68	1273
Blake, Alonzo E., Wilmington, N. C. Seed-planter	604,017	May 17	1449	284	68	982
Blanchard, A. H. (See Arnn, McKenzie, assignor.)						
Blanchard, Frederick G., assignor to American Optical Company, Southbridge, Mass. Lens-cutting machine	602,207	Apr. 12	1079	256, 257	68	217
Blanchard, Helen A. (See Strain, Edwin, assignor.)						
Blanchard, John C., Jr., Hyde Park, Mass. Removable bicycle-handle	605,686	June 14	1049	247	68	1573
Blane, Gilbert G., Windsor, England. Attachment for overalls, leggings, trousers, &c	602,230	Apr. 12	1236	273	68	249
Blank, August. (See Krekeler and Blank.)						
Blank, August. (See Krekeler, Israel, and Blank.)						
Blasse, Alfred R., Frostburg, Md. Hot-air furnace	603,809	May 10	1095	226	68	817
Blauhorn, Ludwig, *et al.* (See Rausch, Rudolf, assignor.)						
Blaxter, Oscar V., Gillette, assignor of one-half to W. A. Woodruff, Plainfield, N. J. Bottle	603,019	Apr. 26	2475	559	68	514
Bleier, Otto, Vienna, Austria-Hungary. Apparatus for gas analysis	605,901	June 21	1702	404	68	1704
Blessing, John G., assignor to A. Tuerk, Chicago, Ill. Time-stamp	602,036	Apr. 5	757	162, 163, 164	68	149
Blickenderfer, Richard. (See Rote, Charles V., assignor.)						
Bliss, William G., Constantinople, Turkey. Privy-stool	604,597	May 24	2288	575	68	1136
Bloch, Isidore, Paris, France. Hermetic fastening for preserve or other tins	601,787	Apr. 5	317	62	68	60
Blodgett, Aaron D., Newton, Mass. Secondary electric clock	604,455	May 24	2200	508	68	1108
Bloom, C. C. (See Maddox, John A., assignor.)						
Bloomfield, Joseph H. (See Nelson, Charles F., assignor.)						
Blum, Sylvain. (See Eldridge, Clark, and Blum.)						
Blum, Sylvain, *et al.* (See Clark, George G., assignor.)						
Boardman, Walter L., Decatur, Ill. Wagon-brake	606,408	June 28	2568	591	68	1894
Boas, Moritz. (See Terrot, Charles, assignor.)						
Bobrick, Gabriel A., Boston, Mass. Adjustable furniture	605,206	June 7	476	107	68	1442
Bobsien, August, New York, N. Y. Machine for ironing brims of straw hats	602,230	Apr. 12	1208	264	68	248
Boddam, Edmond M. T., assignor of one-tenth to G. G. Turri, Melbourne, Victoria. Pneumatic gun	605,216	June 7	291	67, 68	68	1405
Boddam, Edmond M. T., assignor of one-tenth to G. G. Turri, Melbourne, Victoria. Producing and storing gas under high pressure	605,217	June 7	296	69	68	1407
Boeck, Charles H., assignor to Novelty Manufacturing Company, Jackson, Mich. Oil-stove	602,193	Apr. 26	2059	604	68	550
Boeck, Charles H., assignor to Novelty Manufacturing Company, Jackson, Mich. Blue-flame oil-stove	602,194	Apr. 26	2061	604, 605	68	550
Boesing, Ernest, assignor of three-fourths to W. D. Baldwin, Yonkers, and J. H. Walling, Brooklyn, N. Y. Measuring-faucet	602,963	May 10	1285	204	68	874
Boesing, Ernest, assignor of three-fourths to W. D. Baldwin, Yonkers, and J. H. Walling, Brooklyn, N. Y. Beer-measuring faucet	602,964	May 10	1286	204	68	874
Bogart, Adrian L., Jamaica, assignor to W. B. M. Jordan, New York, N. Y. Induction-coil	605,174	June 7	207	59	68	1390
Bogart, Adrian L., Jamaica, assignor to W. B. M. Jordan, New York, N. Y. Insulating electrodes for electric gas-lighting burners	605,661	June 14	1106	255	68	1788
Bogroff, Carl, Odessa, Russia. Steam-radiator	605,775	June 14	1208	301	68	1620
Böhm, Ludwig K., New York, N. Y., assignor to Electro Gas Company, of West Virginia. Acetylene-gas tip	603,441	June 26	2089	604	68	1911
Bokelmann, Herman H., assignor of one-half to H. Purcell, Newark, N. J. Fruit or other jar	603,080	Apr. 26	2476	562	68	514
Boland, Ella E., *et al.* (See Boland, Joseph, assignor.)						
Boland, Joseph, assignor to C. H. Lloyd and E. E. Boland, Pittsburg, Pa. Curtain-pole bracket	603,870	May 10	1146	268	68	880
Bolen, Charles. (See Wilson, Nelson, assignor.)						
Bolton, Calvin O., Denver, Mich. Whiffletree-hook	605,861	June 7	689	129	68	1471
Bolzani, Anton, Berlin, Germany. Brake for hoists or similar apparatus	606,268	June 28	2304	532, 534	68	1647
Bonnell, Russell. (See Schmitt and Bonnell.)						
Bonsall, Seymour W., New York, N. Y. Dress-skirt and wardrobe trunk	604,346	May 17	2070	468	68	1051
Boosen, Louis, Paris, France. Bicycle	604,497	May 24	2241	521	68	1121
Boorum, William B., New York, N. Y. Binding for blank-books	605,116	June 31	2008	459	68	1709
Booth, Henry A., and J. P. Plummer, assignors of one fourth to B. Mann, Petersburg, Va. Traveling-trunk	602,027	Apr. 5	761	164	68	144
Booth, John, Bellville, Tex. Well-strainer	604,651	May 24	2617	600	68	1174
Booth, Thomas W., Windsor, Canada, assignor to Oscillating Truss Company, Detroit, Mich. Truss	603,004	Apr. 26	2455	559	68	510

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.

Boston Check and Ticket Company. (See Jones, Frank L. and E. C., assignors.)						
Boston Fast Color Eyelet Company. (See Kempshall, Eleaser, assignor.)						
Boswell, Henry G., Lihue, Hawaii. Vacuum-pan	604,598	May 24	2289	576	68	1156
Bottini, Enrico, San Francisco, Cal. Air-compressing apparatus for vessels	604,908	May 31	3150	734	68	1295
Boudreau, Ernest A. (See Lombas, Joseph A., assignor.)						
Boughner, William W., Hamilton, Canada. Lawn-mower grinder	603,117	June 21	2008	459	68	1709
Bourne, Edwin H., Downieville, Cal. Rock-drill chuck	603,101	Apr. 26	2080	566	68	541
Bourne, Philip, Brooklyn, N. Y., assignor of one-half to C. L. Dubar and E. F. Vacheron, of New York. Extension-ladder	603,669	June 14	788	175	68	1580
Bouton, Samuel, assignor of one-half to W. F. Ruwell and A. Henwood, Philadelphia, Pa. Explosive-engine	606,504	June 28	2728	586, 587	68	1989
Bouvang, Nels, Rockford, Ill. Photographic opaque negative and printing therefrom	603,986	May 10	1260	297	68	891
Boveroux, George L., Oakland, Cal. Ball-caster	601,726	Apr. 5	198	39	68	39
Bowen, Samuel C., Medina, N. Y. Wire-fence tightener	606,505	June 28	2734	586	68	1989
Bowen, Samuel C., Medina, N. Y. Compensator for wire fences	606,506	June 28	2735	586	68	1990
Bowers, Hiram G., Canton, Ohio. Surgical table	602,571	Apr. 19	1660	384	68	350
Bowers, La Mont M., Cleveland, Ohio. Anchor	603,719	Apr. 19	1957	445	68	401
Bowes, Richard, Darlington, England. Fireplace	603,988	Apr. 26	2241	534	68	490
Bowling, Claud. (See Johnson, Carroll H., assignor.)						
Bowling, Enoch C. (See Bortree, Moses K. and M. H., assignors.)						
Bowling, James R., and G. W. Gilliland, Meredosia, Ill. Coin-operated vending apparatus	603,810	May 10	1097	229	68	817
Bowman, David, Berlin, Canada. Combined bicycle lock and holder	606,118	June 21	2004	459	68	1709
Bowman, Louisa J., Amoret, Mo. Sewing-machine threader	606,269	June 28	2306	534	68	1647
Bowman, William, Mill Grove, Mich. Fence-post	603,168	Apr. 26	2736	610	68	582
Bowne, Eureka C., Trenton, N. J. Non-refillable bottle	606,507	June 28	2736	609	68	1990
Bowne, John D., assignor to J. L. Robertson, New York, N. Y. Filter	603,720	Apr. 19	1958	445	68	401
Boyd, George R., assignor of three-fourths to C. S. Carey and E. Lemen, Cairo, Ill. Cutter-head	601,982	Apr. 5	585	122	68	111
Boyd, Peter, assignor to Riverside Iron Works, Wheeling, W. Va. Apparatus for manufacturing pipe	606,139	June 21	2075	477, 478	68	1769
Boyer, Albert L., Otto, Ind. Handle for hoes, rakes, &c	603,550	May 3	508	125	68	711
Boyer, Martin, Bigterville, Pa. Punching-machine	603,721	Apr. 19	1960	445	68	402
Boyes, David W., and J. R. Denison, Grand Rapids, Mich.; said Denison assignor to said Boyes. Range-boiler	603,722	Apr. 19	1961	445	68	402
Boykin, Christopher C., assignor of one-fourth to J. W. Steel and H. S. Haslette, Norfolk, Va. Letter-file	606,508	June 28	2736	609	68	1990
Boyle, John, Peabody, Mass. Knife-sharpening mechanism for leather-shaving machines	605,697	June 14	1020	241	68	1572
Boynton, Horace G., and C. H. Fravel, New Albany, Ohio. Stopper for jugs	603,888	Apr. 26	2145	487	68	432
Boynton, Thomas W., Duffan, Tex. Kitchen-cabinet	604,454	May 24	2222	506	68	1105
Branach, Henry, Los Angeles, Cal. Ballot-box	603,798	Apr. 19	2096	478	68	427
Brantz, August, Wausau, Wis. Plow-clevis	605,509	June 28	2739	609	68	1991
Brabrook, George H., assignor to Reed & Barton Corporation, Taunton, Mass. Flat metal tableware	605,168	June 28	2128	457	68	1609
Bracken, Howard W., Hopedale, Mass., assignor to Draper Company, Hopedale, Mass., and Portland, Me. Thread or yarn guide	604,599	May 24	2280	576	68	1156
Brackett, Cephas W., assignor to himself and S. L. Rockwell, Jordan, N. Y. Faucet	603,800	Apr. 12	1289	272	68	249
Bradbury, Thomas H., Johannesburg, South African Republic, assignor to Bradbury's World Patent Drill Sharpener Company, Limited, London, England. Rock-drill sharpener	603,887	May 10	1178	296, 297	68	846
Bradbury's World Patent Drill Sharpener Company. (See Bradbury, Thomas H., assignor.)						
Braddock, Effie F., Philadelphia, Pa. Eyeglasses	604,688	May 31	3104	712	68	1289
Bradeen, Ansel R., Seattle, Wash. Rope-clamping hook	603,694	Apr. 19	1918	426	68	396
Braden, John R., Ronan, Iowa. Tree-protector	605,776	June 14	1304	301	68	1621
Bradford, Walter C., Arbuckle, Cal. Wheeled dumping scraper and grader	603,491	May 3	306	60	68	609
Bradish, Alonzo G., *et al.* (See Bradish, Frederick T., assignor.)						
Bradish, Frederick T., Boston, assignor of two-thirds to A. G. Bradish, Medford, and C. F. Fellows, Malden, Mass. Fastening device for tubs, boxes, &c	605,470	June 14	764	175	68	1580
Bradley, Allen, Floris, Va. Wagon-scale	603,997	May 10	1261	297	68	891
Bradley, Charles S., Avon, N. Y. Electric condenser	603,722	May 10	886	199	68	735
Bradley, Edwin M., New Haven, assignor of one-half to F. B. Street, East Haven, Conn. Double or compound fork	605,872	June 30	2495	580	68	1633
Bradley, Frank S., New Haven, Conn. Stapling-machine	602,121	Apr. 12	918	200, 201	68	186
Bradley, Frank S., and F. A. Cotton, New Haven, Conn. Hack-saw machine	604,714	May 31	2751	620	68	1216
Bradley & Hubbard Mfg. Co. (See Jasch, Joseph, assignor.)						
Bradley & Hubbard Mfg. Co. (See Penfield, William A., assignor.)						
Bradley, Rodney D., assignor of one-half to F. K. Mudd, Chicago, Ill. Bicycle-keeper	605,099	June 14	1051	249	68	1572
Brady, Charles N. (See Henry and Brady.)						
Brady, James M., Philadelphia, Pa. Machine for trimming wall-paper	602,958	Apr. 12	1153	253	68	228
Braender, Philip. (See Power, Nicholas, assignor.)						
Bragg, John, Cleveland, Ohio. Deodorizing and purifying petroleum-oil	604,515	May 24	2223	.....	68	1122

Christiansen, Axel M., Chicago, Ill. Curtain-pole						
Christie, Louis C., San Francisco, Cal. Testing apparatus	606,021	June 28	2945	682	88	1979
Christl, Joseph V., assignor to Alling & Co., Newark, N. J. Combined picture-frame and match safe or receptacle	602,687	Apr. 26	2154	489	88	454
Christman, Edward T. Brennan, Jr., and L. W. Homire, assignors to Brennan & Co.	603,178	Apr. 26	2523	623	88	565
Southwestern Agricultural Works, Louisville, Ky. Seeding-machine	605,051	May 31	2306	758	88	1394
Christopherson, Arne, Canton, S. D. Disk-sharpener	603,999	June 7	405	93	88	1069
Christy, Henry A., Jackson, Mich. Bicycle-saddle	604,301	May 17	1972	448	88	1069
Church, Deane H., Newton, Mass. Watch-hand	604,296	May 17	1894	411	88	1006
Clabaugh, Kate A., Martinsburg, Pa. Dust-pan						
Clark, Mark B., Perry, N. Y. Folding box	606,515	June 28	2737	682	88	1982
Claflin, George D., Jr., Toledo, assignor to American Rail Joint and Manufacturing Company, Cleveland, Ohio. Rail-chair	601,946	Apr. 5	640	134	88	120
Clapham, George G., Roslyn, N. Y. Bicycle package-carrier	602,814	Apr. 19	2134	479	88	428
Clare, John H. J., assignor to L. H. Clare, Hammond, Ind. Hot-air attachment for heating-stoves	603,949	May 10	1267	298	88	809
Clare, Louis H. (See Clare, John H. J., assignor.)	604,968	May 31	2157	736 737	88	1307
Clarenbach, Eugen, Berlin, Germany. Apparatus for making fertilizers	606,000	June 21	1776	407	88	1736
Claret, Jean, and O. Vuilleumier, Paris, France. Automatic current-distributer for electric railways						
Clark, Alfred N., Athens, Mich. Tool-sharpener						
Clark, Daniel J. (See Eldridge, Clark, and Blum.)	603,198	Apr. 26	2067	605	88	559
Clark, Daniel J., *et al.* (See Clark, George G., assignor.)	604,746	Apr. 5	243	48	88	47
Clark, Edward H. G., Washington, D. C. Truss	605,999	June 14	1175	270	88	1093
Clark, Frank E., West Bend, Iowa. File-case	605,778	June 14	1827	304	88	1094
Clark, Fred D., Prattsburg, N. Y. Trellis						
Clark, Fred D., Prattsburg, N. Y. Trellis	602,815	Apr. 19	2125	480	88	432
Clark, George G., assignor to S. Blum, H. Eldridge, D. J. Clark, Galveston, and S. Lazarus, Sherman, Tex. Electric furnace	601,704	Apr. 5	187	37	88	39
Clark, George H., Boston, Mass. Machine for cutting tread-filling strips for wheel-tires	601,705	Apr. 5	189	38	88	39
Clark, George H., Boston, Mass. Pneumatic wheel-tire	604,919	May 31	2084	706	88	1295
Clark, George N., Dry Ridge, Ky. Buckle	603,676	May 10	794	175	88	773
Clark, George P., Windsor Locks, Conn. Stock-truck						
Clark, George W. (See Bahan, Walter W., assignor.)						
Clark, Jasper. (See Northcott, Lake, and Clark.)	605,970	June 7	409	93	88	1430
Clark, John A. (See Goodline and Clark.)	604,329	May 17	1973	449	88	1069
Clark, John M., Devall's Bluff, Ark. Metallic railway-tie	603,995	Apr. 26	2244	535	88	491
Clark, Leander, Greenville, Ohio. Wire-stretcher				605	88	559
Clark, Melville, Chicago, Ill. Pneumatic organ	603,187	Apr. 26	2068	606		
Clark, Melville, Chicago, Ill. Pneumatic organ	603,175	June 21	2108	494	88	1780
Clark, Melville, Chicago, Ill. Coupler for pneumatic organs	606,444	June 28	2823	605	88	1911
Clark, Melville, Chicago, Ill. Coupler for pneumatic organs	606,575	June 28	2811	685	88	1848
Clark, Mortimer J., Summitville, Colo. Combined watch-pocket and watch-guard	604,608	May 24	2702	617	88	1159
Clark, Theodore N., Toronto, Canada. Fountain-spittoon	604,738	May 31	2770	------	88	1322
Clarke, Edmund A. S., Chicago, Ill. Producing spiegel or similar metallic alloy						

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Clarke, George R., Montell. Tex., assignor to H. H. and A. Turner, Danbury, Conn. Pouncing-machine	602,977	Apr. 26	2408	548	83	808
Clarke, George R., Montell, Tex., assignor to H. H. and A. Turner, Danbury, Conn. Pouncing-machine	602,978	Apr. 26	2412	548	83	808
Clarke, George R., Montell, Tex., assignors to Pittsburgh Motor Vehicle Company, Pittsburg, Pa. Motor-vehicle	602,998	Apr. 19	1906	295	83	942
Clarke, Louis S., W. Morgan, and W. S. Gordon, assignors to Pittsburgh Motor Vehicle Company, Pittsburg, Pa. Motor-vehicle	601,997	Apr. 5	712	151	83	982
Clarke, Peete B., Mobile, Ala. Automatic scale for measuring material in bulk	604,021	May 17	1455	386	83	1294
Clarke, Robert, Brooklyn, N. Y. Apparatus for bending pipes	602,698	Apr. 26	2157	499	83	454
Clarke, William C., New York, N. Y., assignor to Acetylene Apparatus Manufacturing Company, of West Virginia. Apparatus for mixing air and gas	605,595	June 14	975	225	83	1560
Clarkin, P. Frank, Pontiac, Mich. Wire fence	602,697	Apr. 19	1923	.....	83	304
Classen, Alexander, Aix-la-Chapelle, Germany. Formaldehyde starch and making same. (See Roberts, Albert E., assignor.)						
Clauss, John H. (See Roberts, Albert E., assignor.)	604,949	May 17	2075	464 405	83	1053
Clavies, Emil, Chemnitz, assignor to Kunstweberei Clavies & Company, Leipsic, Germany. Making paper thread	604,950	May 17	2077	465	83	1053
Clavies, Emil, Chemnitz, assignor to Kunstweberei Clavies & Company, Leipsic, Germany. Apparatus for making yarn or thread from paper	604,654	May 24	2321	520	83	1175
Clawson, Richard E. (See Fisher, Thomas N., assignor.)						
Clawson, William H., Rob Roy, Ind. Device for contracting and expanding vehicle-rims	603,173	Apr. 26	2735	622	83	565
Clay, Henry, Fernwood, assignor to J. Johnson, trustee, Philadelphia, Pa. Motor	603,174	Apr. 26	2737	622	83	566
Clay, Henry, Fernwood, assignor to J. Slingluff, Norristown, Pa. Pneumatic-despatch tube	603,938	May 3	25	7	83	605
Clay, William H., Elizabeth, Ky. Gate	605,596	June 14	975	225	83	1560
Clayton, Henry H., Readville, Mass. Kite	601,747	Apr. 5	345	46	83	47
Cleave, John, Crediton, England. Candy-kettle	605,169	June 26	2134	480	83	1812
Clegg, David, Philadelphia, Pa. Apparatus for forming gas	603,209	Apr. 12	1068	227	83	217
Cleland, Darius, Oakland, Cal. Painter's roof-bracket	605,161	June 7	168	46	83	1393
Clement, Archie, and W. E. Wilkinson, Chicago, Ill. Nipple for nursing-bottles	603,135	Apr. 12	935	209	83	157
Clement, Trasimond, Thibodeaux, La. Fly-trap	605,507	June 14	979	225	83	1560
Clements, George R., Rock Creek, Minn. Saw-frame	601,681	Apr. 5	19	3	83	5
Clemm, William T. B., Pocahontas, Va. Lifting device	601,947	Apr. 5	941	134	83	120
Clemson, George N., Middletown, N. Y. Hack-saw	603,126	Apr. 26	2671	606	83	558
Clemson, George N., Middletown, N. Y. Hack-saw (See Cleveland, William F. and E. W.)						
Cleveland, Eugene W. (See Cleveland, William F. and E. W.)						
Cleveland Co-Operative Stove and Hollow Ware Foundry Company. (See Baldwin, William W., assignor.)	605,971	June 7	410	93	83	1430
Cleveland, Isham H., Union, Miss. Combination-lock						
Cleveland School Furniture Company. (See Hitzelberger and Spieth, assignors.)						
Cleveland School Furniture Company. (See Kennedy, Albert H., assignor.)						
Cleveland School Furniture Company. (See Wicke, Wilhelm, assignor.)	603,599	Apr. 12	1269	311 312	83	280
Cleveland, William F., and E. W., Rounthwaite, Canada. Steam-engine	601,632	Apr. 5	12	2	83	5
Cliff, Edward, Newark, N. J. Hose-reel	601,633	Apr. 5	15	4	83	5
Cliff, Edward, Newark, N. J. Hose-reel	603,057	Apr. 12	908	175 216	83	165 198
Cliff, Edward, Newark, N. J. Hose-reel	603,134	Apr. 12	935	217	83	198
Clifford, Charles C., Philadelphia, Pa. Adding-machine	603,943	May 10	1369	288 343	83	863
Clifford, Walter, London, England. Cycle-saddle	605,854	June 21	1496	344	83	1674
Cline, William, assignor to D. D. Good, J. J. Stewart, and J. Sondheimer, Lancaster, Pa. Elevator	605,668	June 14	1108	255	83	1568
Clinton Book Holder Company. (See Platt, Albert L., assignor.)	603,818	May 3	125	30	83	625
Close, John W., assignor of one-half to G. L. Lovejoy, Buffalo, N. Y. Lock-rail frog	605,894	June 7	643	144	83	1475
Clover, Howard E., Council Bluffs, Iowa. Oil-gas motor	604,208	May 24	2114	474	83	1060
Clowry, William H., Chicago, Ill. Air-brake	604,198	May 17	1671	375	83	974
Cloyes, James H., assignor to Staver Carriage Company, Chicago, Ill. Spring-seat	603,509	May 3	579	128	83	718
Clulee, Stephen J., Attleborough, Mass. Frameless spectacles or eyeglasses	603,584	May 3	598	116 117	83	708
Cluxton, James R., London, Ohio. Washboard	603,122	June 21	2012	451	83	1770
Coachman, James J., Rio Janeiro, Brasil. Electric dental-engine controller	605,079	June 7	18	6	83	1356
Coates, Clarence, Cliftondale, Mass. Combination shears and buttonhole-cutter	603,813	May 10	1082	250	83	816
Coates, John, Olive, Cal. Windmill						
Coates, Thomas, Youngstown, Ohio, assignor of one-half to J. Kenworthy, Pittsburg, Pa. Method of and apparatus for manufacturing tubing						
Costa, William T. (See Raymond and Lemley, assignors.)	602,487	Apr. 19	1440	328	83	305
Cockburn, George G., assignor to T. H. Brooks and W. H. Shepard, Cleveland, Ohio. Corner street-sign	605,598	June 14	980	226	83	1560
Cochran Company. (See Moxham, Arthur J., assignor.)						
Cochrane, Hayward, Chicago, Ill. Electric elevator	11,674	June 28	2976	690 691	83	1977
Cocker, Joseph N., West Devonport, Tasmania. Potato-harvester. (Reissue)	603,445	June 28	2934	686	83	1911
Cody, Robert D., Chicago, Ill. Lamp	605,295	June 7	645	144	83	1475
Coes, Zorester B. (See Haskins and Coes.)	601,895	Apr. 5	508	105	83	95
Coffey, John A., Anaconda, Mont. Marker for graves, lands, &c						
Coffin, Samuel, High Point, N. C. Shaft-hanger	602,573	Apr. 19	1094	255	83	350
Coggeshall, Robert D., assignor of three-fourths to J. D. Johnston, Newport, R. I. Door knocker and alarm	603,428	Apr. 19	1450	333 339	83	306
Coggins, Sarah J., Mount Morris, Ill. Ironing-table	603,976	June 28	2814	656	83	1849
Cogley, Marcus A., Croton, N. Y. Pot-ball holder	603,622	May 10	700	156 157	83	753
Cohnen, Bernhard, Grevenbroich, Germany. Apparatus for sizing and dressing hank-yarn	604,209	May 24	2114	475	83	1060
Coins, Francis J., Marshall, Tex. Protector for stay-bolts	605,855	June 21	1500	344	83	1675
Colborne, Oliver, Chicago, Ill. Vise						
Colby & Co. (See Hawes, Herbert E., assignor.)						
Colby, Melvin F. (See Baker and Colby.)						
Cole, A. D., *et al.* (See Hill, James A., assignor.)						
Cole, A. E., *et al.* (See Hill, James A., assignor.)	604,655	May 24	2325	600	83	1175
Cole, Ernest C., Council Bluffs, Iowa. Stove						
Cole, Frank E. (See Eltsroth, Forest W., assignor.)						
Cole, Thomas A., assignor to American Manufacturing Company, Indianapolis, Ind. Cigar-tip cutter	603,877	June 28	2908	682	83	1666
Cole, W. T., *et al.* (See Hill, James A., assignor.)						
Coleman, Clyde, assignor, by mesne assignments, of two-thirds to G. P. Jones, Chicago, Ill. Alarm system	606,405	June 28	2956	692	83	1804

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Coleman, Griffin B., and J. W. Duggan, Washington, D. C. Traveling contact for underground electric railways	603,678	Apr. 19	1890	430 431	83	866
Coleman, John P., Edgewood Park, assignor to Union Switch and Signal Company, Swissvale, Pa. Signal	604,203	May 17	1974	442	83	1033
Coleman, John P., Edgewood Park, assignor to Union Switch and Signal Company, Swissvale, Pa. Signal	604,204	May 17	1976	443	83	1034
Coler, Peter P., Chicago, Ill., assignor to McCormick Harvesting Machine Company. Cord-knotter for grain-binders	604,022	May 17	1456	326	83	934
Colgate, Arthur E., New York, assignor to Signal Control Company, Brooklyn, N. Y. Valve-controller	603,429	Apr. 19	1451	329	83	306
Colgate, Arthur E., New York, assignor to G. J. Schoeffel, Brooklyn, N. Y. Electrical valve-controlling device	605,197	June 7	251	59	83	1398
Collen, Robert, London, England. Machinery for manufacturing casks or barrels	605,516	June 28	2738	622 623	83	1983
Collier, Arthur, Goole, assignor to I. S. McDougall, Didsbury, England. Oil-extractor and feed-water purifier and heater	604,370	May 24	2115	475	83	1060
Collins, Charles, Los Angeles, Cal. Machine for forming springs	603,175	Apr. 26	2739	623	83	566
Collins, N. W., *et al.* (See Hopper, Thomas B., assignor.)	603,374	May 3	223	50	83	643
Colls, Clara. Beaconwood Burnt Green, England. Pneumatic tire	604,023	May 17	1456	327	83	934
Colorado Iron Works Company. (See Morcom, John H., assignor.)						
Colquhoun, James, Clifton, Ariz. Ter. Treating copper matte	606,446	June 28	2935	606	83	1912
Columbus Bicycle Company. (See Midgley, Thomas, assignor.)	602,127	Apr. 12	927	202	83	183
Commoss, Joseph T., New York, N. Y. Fumigator						
Comp, Charles A., Wilkinsburg, Pa. Sheet-music turner						
Compagnie Internationale des Procédés "Adolphe Seigle. (See Rambaud, Jean A., assignor.)	603,075	Apr. 26	2572	584	83	532
Compton, Edward F., Peoria, Ill. Glue-spreading machine	603,250	May 3	23	7	83	605
Compton, James E., Lynn, Mass. Wheel						
Conant, Frederick O. (See Smith, Frank W., assignor.)						
Conklin, Ray. (See La Fave, Joseph H., assignor.)						
Connell, James R., assignor, by mesne assignments, to League Cycle Manufacturing Company, Milwaukee, Wis. Bicycle	604,710	May 24	2732	624	83	1125
Conners, Timothy, Portland, Conn., assignor to American Stamping Company, New York, N. Y. Apparatus for shaping metal ware	601,825	Apr. 5	383	81	83	72
Connet, Ernest P., and F. A. Green, Seward, Nebr. Match-safe	605,856	June 21	1502	344	83	1675
Connor, Elizabeth T. (See Connor, Michael H., assignor.)						
Connor, Michael H., assignor, by mesne assignments, to E. T. Connor, Haverhill, Mass. Leather-staking machine	605,272	June 7	412	93	83	1430
Conrath, John, Chicago, Ill. Draft-rigging for railway-cars	606,447	June 28	2936	606 607	83	1912
Conroy, Frederick P. (See Hebaus, Joseph R., assignor.)						
Conroy, Philip J., *et al.* (See Hitchcock, Charles F., assignor.)	602,230	Apr. 12	1116	245	83	225
Conselyea, Ira W., Newark, N. J. Propelling mechanism for bicycles						
Consolidated & McKay Lasting Machine Company. (See Brock, Matthias, assignor.)						
Consolidated Rubber Works. (See Huestis, Frederick W., assignor.)				28		
Consolidated Rubber Works. (See Leigh, Richard A., assignor.)	601,706	Apr. 5	140	29 30 31	83	80
Converse, Francis B., Jr., Louisville, Ky. Type setting and justifying machine						
Converse, John H., *et al.* (See Austin, William L., assignor.)	604,894	May 31	3040	698	83	1274
Converse, Oliver E., St. Louis, Mo. Safe	606,047	June 21	1969	451	83	1743
Conway, Edward P., Southington, Conn. Axle-nut wrench	606,048	June 21	1970	451	83	1743
Conway, Thomas H., Detroit, Mich. Heating-stove						
Conway, William E., and E. A. Murray, Menominee, Wis.; said Murray assignor to said Conway. Cistern-cleaner	606,161	June 21	2060	479	83	1768
Cook, Alfred H., Jr., Joliet, Ill. File for prescriptions	604,108	May 17	1621	364	83	995
Cook, Daniel B., Superior, Wis., assignor to Cook Rotary Engine Company, of Wisconsin. Rotary engine	604,709	May 24	2729	622 624	83	1195
Cook, Egbert C., Oak Park, Ill. Tent-fastening	601,805	Apr. 5	343	70	83	24
Cook, Frederick W., Jr., San Antonio, Tex. Time-recorder	602,305	Apr. 12	1245	273	83	350
Cook, Horatio E., Lake City, Fla. Syringe	605,052	May 31	3305	759	83	1825
Cook, Leroy, assignor to Washburn & Moen Manufacturing Company, Worcester, Mass. Wire-swaging machine	604,604	May 24	2541	570 580	83	1150
Cook, Oren F., San José, Cal. Means for lubricating shaft-bearings	603,260	May 3	29	7	83	606
Cook Rotary Engine Company. (See Cook, Daniel B., assignor.)	604,909	May 31	3160	727	83	1297
Cook, Samuel L., Jacksonville, Fla. Fireplace-grate						
Cook, Thomas W. G. (See Stern and Cook.)	604,871	May 24	2117	475	83	1061
Cook, William H., Ironwood, Mich. Collapsible and adjustable bicycle-handle						
Cook, William H., Winfred, S. D., assignor to Indiana Manufacturing Company, Indianapolis, Ind. Pneumatic stacker	603,503	May 3	633	141	83	724
Cooledge, Charles W. (See Frost, Souers, and Cooledge.)	604,729	May 31	2773	634	83	1292
Cooley, Joe H., Paris, Tex. Elevated electric car-line	605,622	June 28	2946	653	83	1972
Cooley, John F., assignor of one-half to W. R. Gray, Rochester, N. Y. Kite	602,595	Apr. 19	1732	394	83	357
Coombs, William E., San José, Cal. Device for folding toilet-paper	603,218	Apr. 26	2604	641	83	578
Coon, John D., Nathrop, Colo. Breech-loading firearm	605,857	June 21	1503	344	83	1676
Coon, Gustavus W., Herndon, Va., assignor to H. P. Holden, Washington, D. C. Fire extinguisher	601,948	Apr. 5	542	134	83	120
Coons, Alexander, Lakeview, N. J. Sash-fastener	603,802	May 10	1186	266	83	847
Coons, Warren E., Culpeper, Va. Index						
Cooper, Daniel M. (See Hagen and Cooper.)	603,261	May 3	30	8	83	606
Cooper, David P., Struthers, Ohio. Woodworking-machine						
Cooper, Edward W. (See Cooper, Louis and E. W.)	602,058	Apr. 12	810	175	83	165
Cooper, George F., Xenia, Ohio. Polishing-brush				144		
Cooper, John A., Summit, assignor of one-half to A. C. Savage, Adair, Iowa. Potato-planter	605,396	June 7	646	145	83	1476
Cooper, John W., Cherry Hill, N. J. Detachable shirt-bosom	604,970	May 31	3161	727	83	1297
Cooper, Louis and E. W., Coventry, England. Sprocket-wheel	605,443	June 7	795	168	83	1493
Cooper, William U., Shell Knob, Mo. Burglar-alarm	605,779	June 14	1329	304	83	1625
Copcutt, Frederick W., assignor of one-half to J. H. Raymond, Brooklyn, N. Y. Twine holder and take-up	603,129	Apr. 26	2673	606	83	553
Cope, Henry P., Detroit, Mich. Seat for water-closets	604,556	May 24	2420	500	83	1149
Copenhaver, Robert M., Black Rock, Ark. Fan attachment for rocking-chairs	604,519	May 24	2290	543	83	1130
Copp, David E., Woodstock, Va. Combined sprout-puller and wagon-jack	603,054	Apr. 26	2597	574	83	684
Corbett, Thomas W. (See Hogan, John J., assignor.)	606,448	June 28	2938	607	83	1912
Corbin, Oaky L., Columbus, Ohio. Sash-fastener	603,430	Apr. 19	1454	329	83	307
Corcoran, Patrick W., Forest, Ill. Weed-cutter attachment for cultivators

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Core, George M., Charlotte, N. C. Folding wagon-body	604,730	May 31	2775	634	88	1229
Corey, Fred B., Springfield, Mass. Steam-separator	606,190	June 28	2139	635	88	1813
Corkhill, Henry R., Jr., Rochester, N. Y. Machine for refolding paper tubes	605,053	May 31	2305	491	88	1235
Corkran, Willis J., Hambleton, Md. Can-labeling machine	606,049	June 21	1871	750	88	1745
Cormeny, Margaret M., Roseville, Pa. Pie or cake cooler	602,730	Apr. 19	1975	431	88	405
Cornaille, Fernand. (See Lebrun and Cornaille.)	602,231	Apr. 26	2657	446	88	584
Cornelius, James, Ridgewood, N. J. Tablet-machine	604,971	May 31	3162	647	88	1229
Cornelius, Louis A. (See Fry, John H., assignor.)	604,024	May 17	1459	728	88	1296
Cornwall, John B., assignor to Barnard & Leas Manufacturing Company, Moline, Ill. Packing-auger	604,731	May 31	2776	327	88	994
Corser, Edson J., Macedon, N. Y. Grain-drill	11,660	Apr. 19	2139	635	88	1223
Cory, Isaac, New Decatur, Ala. Duplex pencil-sharpener	601,634	Apr. 5	18	------	88	426
Cothias, Francis A., Ivry-Port, France. Alloy. (Reissue)	604,539	May 24	2461	4	88	6
Cotter, John F., and J. Tager, Kansas City, Mo. Cock or faucet				560	88	1142
Cottle, Kimball H., and R. C. Danly, assignors to F. B. Redington, Chicago, Ill. Sand-blast.						
Cotton, Frank A. (See Bradley and Cotton.)						
Cottrell, Charles P. (See Cottrell, Edgar H. and C. P.)	604,004	May 10	1415	316 317 318	88	996
Cottrell, Edgar H. and C. P., Stonington, Conn., assignors to C. B. Cottrell & Sons Company, Stonington, Conn., and New York, N. Y. Machine for cutting and folding paper.						
Coultas, James W., Chicago, Ill. Stand or chair base	602,677	May 10	796	175	88	772
Coulson, George A., and J. McCaw, Brockville, Canada. Counter-stool for stores	602,210	Apr. 12	1084	237	88	218
Coulson, William A., Moss Point, Miss. Sash-fastener	602,731	Apr. 19	1976	448 449	88	405
Coulter, Arthur W., London, England. Brush	602,431	Apr. 19	1454	330	88	307
Council, G. G. (See Paulen, Jacob W., assignor.)						
Countiss, Edmund W. (See Countiss, James H. and E. W.)	603,893	May 10	1186	268	88	847
Countiss, James H. and E. W., Camden, N. J. Ash-sifter						
Couper, James H. (See Bryan and Couper.)	605,307	June 7	650	145 146	88	1477
Couper, James H., assignor to Bryan Manufacturing Company, Baltimore, Md. Acetylene-gas generator	605,308	June 7	632	146	88	1477
Couper, James H., and T. A. Bryan, Baltimore, Md. Acetylene-gas generator	602,220	Apr. 26	2158	489	88	455
Couper, William P., Washington, D. C. Fountain-pen	603,994	May 10	1190	269	88	847
Court, John S., Memphis, Tenn. End-gate fastening	604,220	May 17	1836	411	88	1007
Cousin, Henri, Paris, France. Apparatus for manufacturing acetylene gas						
Couzineau, Henri E. (See Quesnoy, Etienne, assignor.)	604,605	May 24	2543	560	88	1159
Cousineau, Henri E., Lille, France. Machine for superposing cloths	602,623	May 10	708	157	88	753
Cowan, William E., Brooklyn, N. Y. Conduit-wiring machine						
Cowden, Thomas V., assignor to C. A. Plucker, Philadelphia, Pa. Tandem attachment for bicycles	605,699	June 14	1177	271	88	1597
Cowen, Martin, Bellaire, Ohio. Calendar	601,949	Apr. 5	643	134	88	120
Cowham, William F. (See Belden, Eugene H., assignor.)	604,955	May 31	2976	668 668	88	1260
Cowles, Arthur B., and F. S. Reynolds, Rochester, N. Y. Label-affixing machine	605,209	June 7	654	146 147	88	1477
Cowles, William B., Cleveland, Ohio. Hydraulic mechanism for closing bulkhead-doors						
Cowley, Edwin F. (See Steinacker and Cowley.)	602,206	Apr. 12	1246	274	88	251
Cowper-Coles, Sherard O., assignor to Reflector Syndicate, Limited, London, England. Manufacture of reflectors	602,608	Apr. 19	1924	437	88	394
Cox, Cary S., assignor to L. L. Gray, Fresno and Phoenix Raisin Seeding and Packing Company, Fresno county, Cal. Raisin-seeder	602,176	Apr. 26	2740	634	88	566
Cox, Henry M., Linden, assignor to International Automatic Car Coupler Company, San Joaquin county, Cal. Car-coupling	604,205	May 17	1977	443 444 445	88	1084
Cox, J. Harry, *et al.* (See Luce, Thomas C., assignor.)						
Cox, Paul F., assignor to Cox Type Setting Machine Company, Chicago, Ill. Machine for discarding leads, spaces, and quads from dead-matter						
Cox Type Setting Machine Company. (See Cox, Paul F., assignor.)	605,090	June 7	22	6	88	1257
Coxwell, Herrett I. (See Coxwell, John D., assignor.)						
Coxwell, John D., assignor to H. I. Coxwell, Augusta, Ga. Hay-press	604,560	May 24	2402	560	88	1143
Coyle, John. (See Krieger and Coyle.)				561		
Craig, James, and F. F. Slocomb, Wilmington, Del. Leather-staking machine	602,732	Apr. 19	1977	449	88	405
Craig, Warren H., Lawrence, Mass. Bicycle-saddle	606,194	June 21	2014	461 462	88	1770
Craig, Warren H., Lawrence, Mass. Bicycle-saddle						
Craig, William S., assignor to F. G. Libke and D. H. Brunjes, Chicago, Ill. Machine for labeling cans	605,956	June 21	1504	345	88	1676
Cram, Alonzo W., Haverhill, Mass. Water-closet	605,780	June 14	1330	304	88	1695
Crambitt, Frank, Baltimore, Md. Reversible window-sash	603,478	May 3	423	95	88	668
Cramer, Frederick A., and J. A. Garman, Neenah, Wis. Railway-gate mechanism	602,615	Apr. 19	1764	402	88	363
Cramer, Zenas, Danube, N. Y. Tongs for stretching wires	605,081	June 7	23	7	88	1257
Crandall, Albert L., assignor to J. S. Lee, Rochester, N. Y. Thill-coupling	602,207	Apr. 19	1949	374	88	251
Crandall, Jesse A., assignor of one-half to J. Mocs, Brooklyn, N. Y. Combined hub cap and nut	604,913	May 31	3065	708	88	1269
Crane, Augustus S., Newark, N. J. Button	606,277	June 28	2314	536	88	1849
Crane, Benjamin C. (See Kellerman and Crane.)						
Crane, Peter B., *et al.* (See Shaft and Hays, assignors.)	605,089	June 7	24	7,8	88	1257
Craney, Thomas, Bay City, Mich. Salt-making apparatus	605,050	June 21	1876	432	88	1743
Cranford, William J., Asheville, N. C. Tire-tightener						
Cranor, Ottie, *et al.* (See Green, Casper, assignor.)	602,230	Apr. 26	2160	490	88	455
Cranshaw, S. Dabney. (See Harlan, Howard, assignor.)						
Craw, John W., New York, N. Y. Reversing device	605,573	June 14	932	216	88	1553
Crawford, Albert. (See Dutton and Crawford.)				509		
Crawford, Joseph S., New Kensington, Pa. Bicycle-support	604,457	May 24	2307	510	88	1109
Crebbin, Thomas, Bridgeport, Ala. Basket-making machine						
Cressman, Charles N. (See Berkemeyer, Ferdinand, assignor.)	602,553	May 3	573	127	88	712
Creson, Irving D., Crown Point, Ind. Bedclothes-holder	604,109	May 17	1681	364 365	88	905
Crichton, William B., Bradford, England. Steam or other fluid-pressure engine						
Crippen, Henry D. (See Jackson, Manetho C., assignor.)						
Crisler, Joseph L. (See Flesher and Crisler.)						
Critchfield, C. W., *et al.* (See Williams, Fillmore, assignor.)	604,205	May 17	1900	405	88	1000
Crobarger, George T., Newton, Kans. Cultivator-shovel

Frohlich, George W., Chicago, Ill. Display-box	605,248	June 7	355	81	83	1418
Frost, Cassius C., Fulton, Ohio. Parachute	604,976	May 31	3169	730	83	1299
Frost, Everett C. (See Haffey, James F., assignor.)						
Frost, Fred J., T. Souers, and C. W. Cooledge, Grundy Centre, Iowa. Check-hook	608,284	Apr. 26	2845	649	83	585
Frost Gear Case Company. (See Phillips, Norman A., assignor.)						
Frost, Thomas. (See Haynes, Henry, assignor.)						
Frost, Walter E., assignor to O. S. Ham, Lewiston, Me. Automatic electric fire-alarm	603,270	May 3	49	12	83	610
Frost, Walter S., London, England. Atomizer	602,070	Apr. 12	834	181	83	189
Fry, George B., Bynum, Mont. Cashier-protector	602,741	Apr. 19	1992	451	83	407
Fry, John H., assignor of one-third to L. A. Cornelius, Grand Rapids, Mich. Hose-nozzle	604,086	May 17	1476	331	83	937
Frydmane, Jules, Paris, France. Apparatus for copying, registering, checking, and adding	604,977	May 31	3170	730, 731	83	1299
Frye, Charles E., Wilton, N. H. Cutter-bar	604,311	May 17	1997	448	83	1036
Fryer, George G., assignor to Solvay Process Company, Syracuse, N. Y. Filtering apparatus	606,453	June 28	2647	609	83	1914
Frykholm, Nils E. (See Ringström, August V., assignor.)						
Fuchs, Adolph. (See Jassen, Bern, assignor.)						
Fuchs, Edward, assignor to New York Stencil Works, New York, N. Y. Fare-register	602,700	Apr. 19	1998	438	83	305
Fuchs, Gustav, assignor to M. Koblenzer, Vienna, Austria-Hungary. Device for collecting contents of contribution-boxes	604,587	May 24	2400	546	83	1131
Fugman, Godfrey, Cleveland, Ohio. Metallic partition	601,573	Apr. 5	490	101	83	91
Fuhlmann, Herman C., Eliza, Ill. Non-refillable bottle	602,156	Apr. 12	996	216	83	201
Fuhr, Henry J. (See Fuhr, John C. and H. J.)						
Fuhr, John C. and H. J., Williamsburg, Ohio. Carbureter	604,982	May 31	3108	714, 715	83	1237
Fuller, Bert, Sacramento, Cal. Carpenter's tool	602,130	Apr. 12	982	204	83	186
Fuller, Cornelius, Warren, R. I., assignor of one-half to Somerset Stove Foundry Company, Somerset, Mass. Grate	604,143	May 17	1660	377	83	976
Fuller, Frederick L., Trenton, N. J. Price-scale	602,658	Apr. 19	1843	430	83	378
Fuller, Frederick L., Trenton, N. J. Indicating or like mechanism for price-scales or other machines	603,503	May 3	481	107	83	693
Fuller, Frederick L., Trenton, N. J. Indicating or like mechanism for price-scales	603,504	May 3	484	107	83	694
Fuller, Frederick L., Trenton, N. J. Indicating or like mechanism for price-scales	603,505	May 3	489	108	83	695
Fuller, James T., Calvert, Tex. Pneumatic cotton-handling machine	604,057	May 17	1477	331	83	937
Fuller, James W. (See Snyder, William T., assignor.)						
Fuller & Johnson Manufacturing Company. (See Starks, Nils O., assignor.)						
Fuller, Lawson M., New York, N. Y. Blank cartridge	604,894	May 31	2919	668	83	1250
Funk, Emra W., Canton, Minn. Music-turner	601,644	Apr. 5	33	7, 8	83	8
Furley, Joseph F., North Sydney, and E. Forsyth, Willoughby, New South Wales. Bicycle-support	605,477	June 14	774	178	83	1522
Furness, Frank, Philadelphia, Pa. Nosing-strip for stairways	606,532	June 28	2702	644	83	1943
Fyfe, Daniel, Covington, Tenn. Differential gearing	605,416	June 7	602	154	83	1486
G. W. Jones Lumber Company. (See Stewart, David S., assignor.)						
Gabel, Henry F., Pittsburg, Pa. Gas-burner for water-heaters	604,209	May 17	1805	406	83	1001
Gabel, Henry F., Pittsburg, Pa. Water-heater valve	606,132	June 21	2033	465	83	1773
Gabel, John C., Jr. (See Owen, Gabel, and McKinney.)						
Gaffney, Charles H., assignor to W. B. Lantz, Gloucester, Mass. Seine-pursing machine	604,312	May 17	1998	448	83	1036
Gaffney, Frank C. (See Rosander and Pearson, assignors.)						
Gage-Downs Company. (See Mayer, Murray C., assignor.)						
Gaines, Charles A., assignor to C. Mendelson, New Orleans, La. Apparatus for carbonating liquids	602,986	Apr. 26	2249	536	83	491
Gair, Marie, New York, N. Y. Skirt-supporter	603,760	May 10	928	206	83	797
Gaisman, Henry J., New York, N. Y. Belt	603,034	Apr. 26	2485	564	83	516
Galbrun Gustave L., New York, N. Y. Propelling mechanism	603,440	Apr. 19	1475	336	83	310
Gale, Merritt F. (See Crowell and Gale.)						
Gallagher, Darius F., New York, N. Y. Clothes-line brush	606,488	June 28	2691	620	83	1993
Gallagher, Richard D., Jr., Chicago, Ill. Refrigerator	602,599	Apr. 19	1740	395, 396	83	359
Gallagher, Thomas M., assignor to Shickle, Harrison & Howard Iron Company, St. Louis, Mo. Truck-frame	604,608	May 24	2546	581	83	1160
Gallagher, Thomas M., assignor to Shickle, Harrison & Howard Iron Company, St. Louis, Mo. Transom for car-trucks	604,610	May 24	2549	582	83	1161
Gallagher, Thomas M., St. Louis, Mo., assignor to Shickle, Harrison & Howard Iron Company. Car-bolster	604,609	May 24	2548	581, 582	83	1161

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Gallagher, Thomas M., St. Louis, Mo., assignor to Shickle, Harrison & Howard Iron Company. Car-coupling	605,055	May 31	2309	760	83	1336
Gallegos, José, Guatemala, Guatemala. Electrical foot-gear	603,195	Apr. 26	2055	609	83	555
Gallinowsky, Hugo, assignor, by mesne assignments, to Litbosite Manufacturing Company, St. Louis, Mo. Manufacturing cement	605,637	June 14	1068	.....	83	1576
Galloway, William J. (See Harmsel and Galloway.)						
Gallwey, Edwin J. P., Weymouth, England. Coin-freed apparatus for delivering stamps, &c	601,852	Apr. 5	455	92	83	85
Galpin, Frederic, Williamsfield, Ill. Rotary steam-engine	605,564	June 14	916	215	83	1550
Gamble, Joseph W., Philadelphia, Pa. Injector	602,587	Apr. 19	1637	378	83	340
Gannon, Thomas A., assignor of one-half to E. E. Bryner, S. T. Borts, W. Foster, O. Peterson, F. Morse, P. L. Billings, A. W. Williams, W. T. Bailey, and D. H. Dunbar, Jr., Bradford, Pa. Auger-handle	605,781	June 14	1331	305	83	1635
Gansel, Firm of I. (See Dallmann, Erich, assignor.)						
Gapsch, Richard, *et al.* (See Brengman, John, assignor.)						
Garcia, Antonio C., Modesto, Cal. Automatic steering-head for bicycles	605,417	June 7	604	154	83	1486
Gardiner, Fred A., Dedham, Mass. Boiler	603,877	May 10	1160	261, 262	83	842
Gardiner, Joseph B., Boston, assignor of one-half to A. H. Sawyer, Newburyport, Mass. Seat for couches	605,095	June 7	50	16	83	1362
Gardner, Douglas, and E. B. Hartley, Birmingham, England. Handle-bar for cycles	601,798	Apr. 5	327	66	83	62
Gardner, George L., assignor of one-half to F. D. Bittinger, Dayton, Ohio. Muffler for engines	606,280	June 28	2321	537	83	1850
Gardner, Harry F., and F. J. Benscoter, Macksville, Kans. Lock-nut	603,683	May 10	904	177	83	774
Gareau, Roch R., Detroit, Mich. Illuminated clock-dial for indicators, &c	605,312	June 7	486	109	83	1444
Garis, David V., assignor of one-half to C. L. Schwarz, Philadelphia, Pa. Hat-fastener	606,006	June 21	1790	411	83	1728
Garland, Charles L., Sydney, J. and S. E. Murray, Cowra Creek, New South Wales. Centrifugal amalgamator and separator	604,978	May 31	3176	732	83	1300
Garman, James A. (See Cramer and Garman.)						
Garneau, Joseph A., St. Roche, Canada. Corset	603,843	May 10	1095	245	83	829
Garnett, Carroll, Front Royal, Va. Bolt-fastening	604,906	May 31	3043	698	83	1274
Garrett, James A., Troy, Tex. Cotton-seed separator	605,583	June 28	2793	645	83	1943
Garrett, James V., Crawfordville, Ga. Combination-scaffold	604,979	May 31	3178	732	83	1300
Garrigus, Walter A., and R. Golling, Lenoir City, Tenn. Nut-lock	604,114	May 17	1633	366	83	997
Gartland Foundry Company. (See Short, Robert L., assignor.)						
Gartner, Alfred, assignor to Inventor's Novelty Manufacturing Company, Paterson, N. J. Exhibiting-cabinet	605,222	June 7	308	71	83	1410
Gartrell, John H., Penmance, England. Apparatus for swaging dental plates	605,223	June 7	310	71	83	1410
Garver, Martin V., Bryan, Ohio. Wheelbarrow	602,504	Apr. 19	1574	360	83	350
Gaskill, Joshua, *et al.* (See Moon, Frank D., assignor.)	604,579	May 24	2502	560	83	1151
Gass, William G., and J. Tonge, Bolton, England. Portable pump	603,271	May 3	50	13	83	610
Gates Iron Works. (See Hanna, Elmer E., assignor.)	603,272	May 3	51	13	83	610
Gatling, Richard J., New York, N. Y. Cotton-thinner	605,313	June 7	487	109	83	1444
Gaul, Ray, Brooklyn, N. Y. Furnace	608,694	June 28	2949	.....	83	1973
Gaylord, John F., Portsmouth, Va., assignor, by mesne assignments, of one-fourth to M. L. Straus, Baltimore, Md. Automatic-lever switch	606,133	June 21	2034	466	83	1774
Gebhardt, William, assignor of one-half to A. Kronkosky, San Antonio, Tex. Food compound and making same	602,538	Apr. 19	1639	373	83	341
Geddes, Jane, Rutland, Vt. Convertible couch	602,318	Apr. 12	1206	280	83	255
Gedge, George E., Springfield, Ohio. Harrow	605,952	June 21	1663	386	83	1710
Geidt, Henry, Baltimore, Md. Bicycle-support	603,684	May 10	905	177	83	774
Gee, Horace L., assignor to Diamond Truck and Car Gear Company, Kingston, N. Y. Truck for motor-cars, &c						
Geiger, John P., Orwigsburg, Pa. Throttle						
Gem Flexible Insole Company. (See Hadaway, John B., assignor.)						
General Electric Company. (See Hewlett, Edward M., assignor.)						
General Electric Company. (See Steinmetz, Charles P., assignor.)						
General Electric Company. (See Stone and Doane, assignors.)						
General Electric Company. (See Thomson, Elihu, assignor.)						
General Electric Company. (See Wirt, Herbert C., assignor.)						
General Electric Company. Hydrant and stand-pipe	604,611	May 24	2550	582	83	1161
Geneest, Ludger, Hull, Canada.						
Geneva Cycle Company. (See Castle, William H., assignor.)	603,457	May 3	319	73	83	661
Gennert, Emil F., New York, N. Y. Candle-lamp for photographic dark rooms						
Geo. P. Blake Manufacturing Company. (See Hall, Albert F., assignor.)						
Geo. F. Blake Manufacturing Company. (See Laval, George de, assignor.)						
Gerber, Cornelius, *et al.* (See Durham and Devine, assignors.)						
Gerber, Cornelius, *et al.* (See Reed, Roger E., assignor.)						
Gerber, D. Milton, *et al.* (See Durham and Devine, assignors.)						
Gerber, D. Milton, *et al.* (See Reed, Roger E., assignor.)						
Gerber, George H. (See Mengel, Blakley, and Gerber.)						
Gere, Theodore D. (See Sauerbrey, Christian, assignor.)						
Gerry, James H., Brooklyn, N. Y., assignor, by mesne assignments, to I. P. Lampson, Cleveland, Ohio. Time-recorder	602,296	Apr. 12	1215	267, 268	83	344
Gersant, Jules, Deal, and A. G. Buttifant, London, England. Means for hermetically sealing metal boxes, &c	605,604	June 14	1000	231	83	1563
Gersant, Jules, Deal, and A. G. Buttifant, London, England. Can-side-seam-fusing machine	605,605	June 14	1001	231	83	1563
Gesner, George W., New York, assignor to H. C. Gesner, Brooklyn, N. Y. Process of and apparatus for alloying iron and hydrogen	604,580	May 24	2508	560	83	1151
Gesner, Harleston C. (See Gesner, George W., assignor.)						
Gibbs Electric Company. (See Gibbs and Stone, assignors.)						
Gibbs, George, Milwaukee, Wis., and I. Stone, Chicago, Ill., assignors to Gibbs Electric Company, Milwaukee, Wis. Automatic stop mechanism for printing-presses	605,478	June 14	776	178	83	1522
Gibbs, George, W. S. Johnson, and H. Winkenwerder, Milwaukee, Wis. Controlling mechanism for electric motors	605,953	June 21	1669	387	83	1711
Gibbs, James E. A. (See Willcox, Gibbs, and Borton.)	604,745	May 31	2798	640	83	1227
Gibbs, Lucius T., New York, N. Y. Compressed-air engine						
Gibney, John, *et al.* (See Towers, Edmund, assignor.)						
Gibson, Frank W. (See Burs, George, assignor.)	603,829	May 10	1072	240	83	894
Giddings, Charles M., Rockford, Ill. Engine-governor	605,818	June 14	1400	321	83	1686
Giddings, Howard, Chicago, Ill. Pendent cigar-lighter						
Gleeson, John. (See Janin, John V., assignor.)						
Gleisler, Arthur, assignor to Stilwell-Bierce & Smith-Vaile Company, Dayton, Ohio. Atmospheric gas-compressor	603,802	Apr. 19	2108	474, 475, 476	83	498
Gifford, Arthur, assignor to Gifford Brothers, Hudson, N. Y. Ice-handling machinery	604,007	May 10	1494	318, 319	83	897

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Gifford Brothers. (See Gifford, Arthur, assignor.)						
Gifford, John, Watertown, N. Y. Snow-shovel	606,534	June 28	2795	645	83	1943
Gifford, Leander W. (See Dupaw, Josiah, assignor.)	604,144	May 17	1661	378	83	976
Gigney, Edmund H., London, England. Transposing mechanism for pianofortes	604,088	May 17	1479	333	83	936
Gilbert, Augustine N., Berlin, N. H. Rotary engine	603,620	May 10	715	160	83	756
Gilbert, Daniel C. (See Wyssinger, Leonard, assignor.)	602,954	Apr. 26	2481	551	83	504
Gilbert, Frederick A., Brookline, and E. O. Lundin, Beachmont, Mass. Electric-arc lamp.						
Gilbert, John W., and H. H. Parker, Creek, Tex. Gate	605,460	June 7	750	171	83	1497
Gilbert, Melvin E., San Francisco, assignor of one-half to F. P. Wickersham, Fresno, Cal. Rotary engine	604,313	May 17	2000	448	83	1089
Gilbertson, Gilbert G., West Mitchell, Iowa. Pulverizing attachment for cultivators	601,750	Apr. 5	347	49	83	47
Giles, John H. (See Russell, John H., assignor.)	602,319	Apr. 12	1267	280	83	255
Gilfillan, Essington N., assignor of one-half to H. A. Wheeler, Chicago, Ill. Sash-fastener.						
Gilkey, Joseph A., Springfield, Oreg. Wagon-brake	606,337	June 28	2433	563 / 564	83	1873
Gill, Arthur B. (See Preston and Gill.)						
Gill, John, assignor of one-half to H. G. Peckham, Jersey City, N. J. Hydraulic engine	606,901	June 28	2155	494	83	1616
Gillam, James C., Coffeyville, Kans. Overshoe attachment						
Gillet, Joseph. (See Hoyt and Gillet.)						
Gillett, Clarence R., and O. S. Hellwig; said Hellwig assignor to said Gillett; said Gillett assignor to Gillett Generator Company, Chicago, Ill. Acetylene-gas generator	603,506	May 3	494	108	83	697
Gillett Generator Company. (See Gillett and Hellwig, assignors.)						
Gilliland, George W. (See Bowling and Gilliland.)						
Gilliland, James F., assignor to Adrian Box Company, Adrian, Mich. Box-printing machine	603,685	May 10	806	178	83	774
Gilmore, James J., Allegheny, Pa. Binder	602,742	Apr. 19	1903	458	83	407
Gilmour, Lyle J., Long Grove, Iowa. Tool for tighten ng wire fences	604,746	May 31	2800	640	83	1227
Giltonniere, Raoul R., de la. (See Singleton and Giltonniere.)						
Gingi, Edward L. (See Dinkelberg, Theodore, assignor.)	606,454	June 28	2451	610	83	1915
Girard, Ferdinand, Paris, France. Apparatus for applying liquids to textile fabrics						
Giron-Lanauze, Guillaume. (See Lafaurie and Giron-Lanauze.)	602,845	Apr. 26	2168	494 / 495 / 496 / 668 / 669	83	459
Giroud, Peter G., Newark, N. J., assignor to J. S. MacCoy, New York, N. Y. Workman's time-recorder	604,826	May 31	2920		83	1250
Gittus, Charles, Jr., assignor of two-thirds to A. F. Farman, Jr., and L. C. Gittus, Golden Gate, Cal. Music-leaf turner	605,043	May 31	2987	755	83	1321
Gittus, Charles, London, England, assignor of one-third to C., Jr., and L. C. Gittus, Golden Gate, Cal. Pin or peg for strings of musical instruments						
Gittus, Louis C., *et al.* (See Gittus, Charles, assignor.)	606,336	June 28	2436	564	83	1872
Gittus, Louis C., *et al.* (See Gittus, Charles, Jr., assignor.)						
Gizzi, Francis, New York, N. Y. Disinfecting apparatus	604,210	May 17	1806	406	83	1001
Glacken, Raymond M. (See Day and Glacken.)						
Glase, John O., Reading, Pa. Tool holder or carrier for bicycles	603,631	May 10	720	160 / 161	83	757
Glaskin, Edwin E., *et al.* (See Steward, George R., assignor.)						
Glasmachers, Gottfried, Essen, Germany. Blackboard	601,956	Apr. 5	653	137	83	123
Glasgow, Arthur G., *et al.* (See Green, Henry, assignor.)	605,535	June 28	2797	645	83	1944
Glatz, F. E., *et al.* (See Klemm, Hermann A., assignor.)	605,536	June 28	2799	645	83	1944
Glauber, Joseph H., Cleveland, Ohio. Stop and waste cock						
Glauber, Joseph H., Cleveland, Ohio. Pipe-coupling for broken water-closet bowls	605,249	June 7	356	81 / 82 / 83	83	1419
Gleason, James E., assignor to Gleason Tool Company, Rochester, N. Y. Machine for forming gear-teeth						
Gleason, Robert M., E. J. Jackoboice, and A. H. Waterson, Grand Rapids, Mich. Glue-jointing machine	601,956	Apr. 5	653	137	83	123
Gleason, Robert W. (See McLaughlin, John G., assignor.)						
Gleason Tool Company. (See Gleason, James E., assignor.)	602,662	Apr. 19	1897	432	83	360
Gleixner, Joseph A., Fair Haven, Pa. Seed-sower	606,455	June 28	2652	610	83	1915
Glennon, Joseph M., Chicago, Ill. Bicycle-seat support	602,749	Apr. 19	1904	452	83	406
Glidden, George F., Watertown, Mass. Device for closing punctures in pneumatic tires	605,181	June 7	221	54	83	1305
Glidden, William F., Ingersoll, Canada. Bicycle-wheel belt						
Glorieux, William L. (See Warter, Antoine, assignor.)	604,089	May 17	1480	333	83	938
Godin, Eugene, Three Rivers, Canada. Acetylene-gas generator	604,392	May 24	2132	479	83	1094
Goding, Edwin L., Portland, Me. Last	604,393	May 24	2133	479	83	1094
Goding, Edwin L., Portland, Me. Last	605,416	June 7	605	154	83	1497
Goetz, Charles, Viola, Idaho. Egg-carrier	606,134	June 21	2086	466	83	1774
Goetze, Max, assignor to W. G. Smith and C. C. Polk, Sturgis, S. D. Spark-arrester						
Goff, L. S., *et al.* (See Vance, Charles G., assignor.)	604,384	May 24	2134	479	83	1084
Gold, Edward E., New York, N. Y. Electric heater	602,280	Apr. 12	1266	280 / 281	83	256
Goldberger, Ignatz, Cleveland, Ohio. Undergarment	606,902	June 28	2156	495	83	1817
Goldberger, Ignatz, Cleveland, Ohio. Undergarment	606,903	June 28	2158	496	83	1817
Goldberger, Ignatz, Cleveland, Ohio. Undergarment	606,537	June 28	2800	646	83	1944
Goldenfarb, Henry, London, England. Cigarette	606,507	May 3	495	108	83	697
Goldie, Peter C., Brockton, Mass. Trousers-protector	601,645	Apr. 5	38	8	83	9
Goldie, William, Wilkinsburg, Pa. Rail-sustaining bar	601,646	Apr. 5	40	8	83	9
Goldie, William, Wilkinsburg, Pa. Rail-sustaining bar or plate	601,647	Apr. 5	42	8	83	9
Goldie, William, Wilkinsburg, Pa. Rail-sustaining bar or plate	603,168	Apr. 26	2748	625 / 626	83	568
Goldsmith, Byron B., New York, N. Y. Magazine lead-pencil	605,163	June 7	189	48	83	1366
Goldsmith, Byron B., New York, N. Y. Eraser	605,164	June 7	191	48	83	1367
Goldsmith, Byron B., New York, N. Y. Game or puzzle						
Goldsmith, Marcus K. (See Harris and Goldsmith.)						
Goldsmith, William H. (See Hamblin, Stephen M., assignor.)

Gunther, William H., Owensborough, Ky. Steam-engine governor	602,579	Apr. 19	1701	397	88	852
Gustafson, Walfrid, New York, N. Y., assignor to American Automatic Banjo Company, of New Jersey. Picker device for stringed musical instruments	606,207	June 28	2173	499	88	1619
Gustafson, Wictor A., Joliet, Ill. Telephone system	606,285	June 28	2351	540	88	1652
Gustaveson, Frank, Wabasha, Minn. Ball-bearing	602,701	Apr. 19	1061	426	88	996
Gutmann, Ludwig, Pittsburg, Pa. Electric transformer	602,218	Apr. 12	1100	242	88	931
Gutmann, Ludwig, Peoria, Ill. Transformer box and hanger	606,208	June 28	2174	499	88	1619
Guttenberg, Frederick, Brooklyn, N. Y. Water-cooler	604,748	May 31	2906	641	88	1228
Guy, Frederick S., London, England. Handle-bar for cycles	604,981	May 31	3181	723	88	1301
Guyer, Nelson, *et al.* (See Kissell, Aaron, assignor.)						
Guyer, Nelson, J. P. Kelly, and A. Kissell, Cygnet, Ohio. Automatic cut-off for oil-tanks	603,985	May 10	1299	305	88	875
Haarlaender, Otto J., Newark, N. J. Puzzle	605,096	June 7	51	16	88	1362
Habermaas, Edward W., St. Louis, Mo. Sash-lock	604,982	May 31	3168	723	88	1301
Hachenberg, Louis, assignor to E. F. Wattson and L. Sandford, New York, N. Y. Scale	605,638	June 14	1069	{245 246	88	1576
Hacker, Charles E., Brunswick, Me. Road-making machine	603,139	Apr. 26	2090	611	88	556
Hackett, John C., St. Louis, Mo. Lifting-jack	604,583	May 24	2507	570	88	1158
Hackett, William F., Winchester, Ky. Coin-controlled apparatus for dispensing liquids	604,318	May 17	2008	450	88	1040
Hadaway, John B., Brockton, Mass., assignor, by mesne assignments, to Gem Flexible Insole Company, of Maine. Insole-reinforcing machine	603,763	May 10	988	{207 208 209	88	798
Hadaway, John B., Brockton, Mass., assignor, by mesne assignments, to Gem Flexible Insole Company, of Maine. Insole-reinforcing machine	603,764	May 10	988	{209 210	88	799
Hadley, Charles O., McKeesport, Pa. Combined shelf and table	602,321	Apr. 12	1271	281	88	956
Hadsall, Amos, Mapleton, Oreg. Device for converting motion	604,896	May 31	2988	699	88	1251
Haenichen, Adolph, Paterson, N. J. Sash-holder	601,958	Apr. 5	657	136	88	122
Haenichen, Adolph, Paterson, N. J. Sash-fastener	601,959	Apr. 5	659	136	88	124
Haffcke, Charles, Baltimore, Md. Burner	606,136	June 21	2088	{466 467	88	1774
Haffey, James F. (See Baron and Haffey.)						
Haffey, James F., assignor of one-half to E. C. Frost, Tiffin, Ohio. Wire fence	602,444	Apr. 19	1461	336	88	911
Hagan, Elijah J., assignor of one-half to R. C. Ocheltree, Bayard, Iowa. Screen-door fastening	604,468	May 24	2300	533	88	1114
Hagan, Leo S., Brewer, Mo. Fruit-picker	605,419	June 7	696	155	88	1487
Hagemann, Paul, and H. Pasler, Stettin, Germany. Spark-catcher	603,378	May 3	298	51	88	644
Hagen, Arthur T., and D. M. Cooper, Rochester, N. Y. Starching-machine	606,411	June 28	2568	{594 595	88	1897
Hager, Carl M., Worcester, Mass. Egg breaking and measuring utensil	603,635	May 10	727	163	88	758
Hagey, H. Given. (See Schneider, John B., assignor.)						
Hahner, Elizabeth, *et al.* (See Wasciniski, Alexander, assignor.)	603,563	May 3	586	130	88	714
Haight, William E., McMinnville, Oreg. Neck-yoke						
Haines Electric Company. (See Haines, John H. J., assignor.)	602,257	Apr. 12	1163	{255 256	88	934
Haines, John F., Freeport, Pa. Soda-water apparatus	603,687	May 10	809	{178 179	88	775
Haines, John H. J., New York, N. Y., assignor to Haines Electric Company, Jersey City, N. J. Electric-arc lamp	606,008	June 21	1800	414	88	1780
Haines, Jones & Cadbury. (See Sharp and Grantland, assignors.)	605,420	June 7	697	155	88	1487
Haken, Eduard von, Charlottenburg, Germany. Coin-freed automatic machine						
Haldeman, John R., Springfield, Mo. Gate-hinge						
Hale, Johnson, *et al.* (See Roach, Henry B., assignor.)						
Hale & Kilburn Manufacturing Company. (See Norcross, William M., assignor.)						
Haley, William, assignor to National Mold and Casting Company, Beaver Falls, Pa. Cooling-table for glass-molds	602,399	Apr. 12	1405	{316 317	88	889
Hall, Albert, Brooklyn, N. Y. Button-back	604,682	May 31	3094	694	88	1271
Hall, Albert F., Boston, Mass., assignor to Geo. F. Blake Manufacturing Company, of New Jersey. Direct-acting steam-pump	604,618	May 24	2553	583	88	1162
Hall, Cofran L., assignor to Cahill & Hall Elevator Company, San Francisco, Cal. Apparatus for operating elevators	605,044	May 31	2890	755	88	1382
Hall, Daniel, and J. H. Kay, Ashton-under-Lyne, England. Humidifying air	602,745	Apr. 19	1997	453	88	406
Hall & Donahue Coffin Company. (See Donahue, John, assignor.)						
Hall, Edgar J., St. Louis, Mo. Street-indicator	602,746	Apr. 19	1997	453	88	406

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'gs.	Official Gazette. Vol.	Official Gazette. Page.
Hall, Edward, Worcester, Mass. Cloth-folding machine	604,749	May 31	2807	641	88	1228
Hall, Edward S., New York, N. Y. Plunger brake-head	601,651	Apr. 5	48	10	88	10
Hall, Edward S., New York, N. Y. Bicycle-brake	603,140	Apr. 26	2091	611	88	557
	604,859	May 31	2988	685 686	88	1363
Hall, Elijah C., Braintree, Mass. Heater	606,542	June 28	2807	------	88	1045
Hall, Francis B., Plattsburg, N. Y. Printing-ink	604,043	May 17	1490	335	88	940
Hall, Frank E., Quincy, Mass. Elastic tire	603,219	Apr. 26	2806	641	88	576
Hall, George A., assignor of one-half to G. E. Dayton, New York, N. Y. Gas-burner	604,983	May 31	3166	733	88	1301
Hall, Herbert E., Brooklyn, N. Y. Sanitary bowl	604,043	May 17	1491	335	88	940
Hall, Olive E., Oconto, Wis. Mattress	602,940	Apr. 26	2351	536	88	492
Hall, Orlando C., Wilkes-Barré, Pa. Manufacture of carriage-axles	604,750	May 31	2806	642	88	1229
Hall, Osborn B., Malden, Mass. Tire	603,617	May 10	1041	238	88	820
Hallbauer, Ernst M., Chicago, Ill. Can	602,008	Apr. 5	728	155 156	88	136
Hallé, Jacques, Paris, France. Moving way or stair for transporting persons and goods	602,219	Apr. 12	1101	249	88	288
Hallenbeck, Williard A., Hudson, N. Y. Puzzle	602,075	Apr. 12	843	189 188	88	171
Halley, Walter C., Halley, Ark. Cattle-guard	603,445	May 3	350	76	88	667
Hallock, Lee T., Danbury, Conn. Hat-packing ring	602,702	Apr. 19	1962	439	88	396
Hallstrom, Sven M., *et al.* (See Reid, Robert, assignor.)	605,097	June 7	58	16, 17	88	1362
Halsted, David F., Brooklyn, N. Y. Knit fabric for underwear, &c						
Ham, Edwin W., Worcester, Mass. Telephone system						
Ham, Orland S. (See Frost, Walter E., assignor.)						
Hamblin, Stephen M., Taunton, Mass., assignor of three-fourths to W. H. Goldsmith, Central Falls, R. I. Loom-shuttle	603,141	Apr. 26	2604	611	88	557
Hamblin, Stephen M., Taunton, Mass., assignor of three-fourths to W. H. Goldsmith, Central Falls, R. I. Loom-shuttle	603,603	May 3	656	146	88	729
Hambly, George, *et al.* (See Folwell, Philip C., assignor.)	605,421	June 7	698	155	88	1487
Hamburg, Eugene F., Rochester, N. Y. Cigar-box	604,044	May 17	1492	335	88	940
Hamel, Albert H., and A. N. Hibbert, De Soto, Mo.; said Hibbert assignor to said Hamel. Orthopedic appliance	602,076	Apr. 12	844	163 184	88	171
Hamerschlag, Arthur A., and T. H. Price, New York, N. Y. Cotton-picking machine						
Hamilton, Alpheus A., Philadelphia, Pa. Tangled-grain separator for harvesting-machines	606,137	June 21	3039	467	88	1775
Hamilton, Casslus M. (See Thomas and Hamilton.)	604,398	May 24	2139	480	88	1065
Hamilton, Edgar E., Berlin, Conn. Shipping box or crate						
Hamilton, Henry C., *et al.* (See Brengman, John, assignor.)	606,286	June 28	2384	540 541	88	1858
Hamilton, Hugh, Rochester, N. Y. Card-indexing file and locking mechanism	604,289	May 24	2140	481	88	1065
Hamilton, John L., Jr., Hoopeston, Ill. Adjustable handle-bar						
Hammann, Edward, Brooklyn, assignor to J. L. Mott Iron Works, New York, N. Y. Basin-fixture	603,727	May 10	875	194	88	787
Hammer, John H., Allegheny, Pa. Projectile	603,466	May 3	401	90	88	678
Hammer, Thorvald F., Branford, Conn. Pipe-joint and union	605,098	June 7	55	17	88	1365
Hammer, Willie A., Fairlie, Tex. Axle-repairing apparatus	603,636	May 10	727	163	88	758
Hammon, James, *et al.* (See Green, Casper, assignor.)	605,225	June 7	313	72	88	1411
Hammond, Myron B., Bridgeport, Conn. Garment-supporter	605,871	June 21	1524	351	88	1680
Hampel, Ernst, Haunold, Germany. Potato-digging machine	604,390	May 24	2142	481	88	1065
Hamren, Joseph L., Moville, Iowa. Loading or unloading machine	604,190	May 17	1772	390	88	995
Hance, Anthony M., Philadelphia, Pa. Display-box	604,347	May 17	1872	420	88	1013
Hancock, George, Providence, R. I. Safety-brake for elevators	605,920	June 14	1401	321	88	1638
Hancock, George, Providence, R. I. Safety-brake for elevators	604,391	May 24	2144	482	88	1066
Hancock, Henry J., New York, N. Y. Wrench						
Hancock, Henry L. (See Hancock, Henry R., H. L., and L. G.)	603,529	May 3	539	116 119	88	704
Hancock, Henry R., H. L., and L. G., Moonta Mines, South Australia. Rock-drill						
Hancock, John C. (See Hancock and Scholes.)						
Hancock, Leigh G. (See Hancock, Henry R., H. L., and L. G.)						
Hancock, William and J. C., and E. Scholes, Hollinwood, assignors of two-fifths to J. E. Lees and F. N. Tweedale, Oldham, England. Elastic wheel-tire	605,546	June 14	878	206	88	1542
Hancock, William D., Coffeyville, Kans. Shoestring-holder	604,917	May 31	3089	710	88	1283
Hand, August, Cleveland, Ohio. Billiard-table	605,872	June 21	1526	351	88	1680
Handiges, Philip T. (See Simpson and Handiges.)	604,934	May 31	3112	715	88	1298
Handiges, Philip T., Detroit, Mich. Car-coupling						
Hanford, Charles H. (See Staples and Bush, assignors.)						
Hanington, Charles F., New York, N. Y., assignor to Mechanical Door Hinge Check Company, of New York. Door-check	601,830	Apr. 5	330	82	88	73
	606,009	June 21	1801	414 415	88	1730
Hanks, Marshall W., Madison, Wis. Electric controller	603,948	May 10	1276	290	88	865
Hanlon, Daniel H., Preston, Minn. Cyclone-vault	606,543	June 28	2809	647	88	1945
Hanna, Elmer E., assignor to Gates Iron Works, Chicago, Ill. Self-lubricating engine	604,045	May 17	1493	335	88	941
Hannahs, Fred C., assignor to Kenosha Crib Company, Kenosha, Wis. Child's chair	606,339	June 28	2438	564	88	1873
Hansel, Charles, Easton, Pa. Railway-crossing	603,189	Apr. 12	984	204	88	189
Hansell, Robert C., San Antonio, Tex. Armor for pneumatic tires	604,614	May 24	2555	588	88	1162
Hansen, Harry I., Boonton, N. J. Rope-making machine	604,918	May 31	3090	710	88	1283
Hanson, Julius L., Governor's Island, N. Y. Whistle	602,445	Apr. 19	1482	338	88	311
Hanson, Paul, Chicago, Ill. Grain-binder	602,322	Apr. 12	1272	281	88	256
Harcourt, Matthew, Detroit, Mich. Hanger for fire-harness						
Hardenbrook, Charles E., Philadelphia, Pa., assignor to Morley Button Sewing Machine Company, Boston, Mass. Button-feeding mechanism	602,904	Apr. 19	2106	475	88	499
	604,984	May 31	3184	733	88	1302
Harder, Arthur J., Williamsport, Pa. Filter	604,319	May 17	2011	450	88	1040
Harder, George D., Cobleskill, N. Y. Binding attachment for threshers or rubbers	604,469	May 24	2301	523	88	1115
Hardin, Charles B., and J. D. Mosby, Kansas City, Mo. Horse-detacher	602,747	Apr. 19	1966	458	88	408
Harding, Charles K., Chicago, Ill. Smelting phosphorus	603,949	May 10	1277	290	88	865
Harding, Charles W., Musselshell, Mont. Receptacle for chewing-gum	603,765	May 10	943	211	88	800
Harding, William E., South Framingham, Mass. Photographic retouching-table	604,390	May 17	2013	451	88	1040
Hardwick, Harry, Philadelphia, Pa. Cut-pile carpet fabric			7			
Hardy, William H., Hartlepool, England. Tool and holder for use in cutting, boring, and slotting metals	605,422	June 7	699	155	88	1487
Hare, John H., Nobiesville, Ind. Reversing-gear	605,226	June 7	314	72	88	1411
Hare, John R., Baltimore, Md. Patch for pneumatic tires	603,946	May 10	1100	247	88	830
Harfield, William H., London, England. Steam steering-gear	603,086	Apr. 26	2504	566	88	519
Harkness, Charles B., Reading, and W. T. Crowell, Boston, Mass. Shutter-controller	603,333	Apr. 19	1974	288	88	257
Harlan, Howard, Richmond, assignor of one-half to S. D. Cranshaw, Henrico county, Va. Ore-roasting furnace	602,400	Apr. 12	1407	317	88	288
Harlow, Franklin W., Eureka, Colo. Combined ore concentrator and slimer	606,138	June 21	3041	467 468	88	1775
Harlow, William O., assignor of one-half to L. A. Lohr, Shenandoah, Va. Car-door	604,899	May 31	3048	699	88	1275
Harmel, John W., and W. J. Galloway, Pekin, Ill. Boiler-furnace	605,281	June 7	436	96	88	1433
Harmon, Orville S., Brooklyn, N. Y., assignor to P. Lorillard Company, Jersey City, N. J. Machine for treating tobacco	606,200	June 28	2176	500	88	1819
Harnden, Charles, Bowmanville, Canada, assignor to J. W. Ivory, Philadelphia, Pa. Dental mouth-mirror	606,456	June 28	2653	610	88	1915
Harp, William L., Sparta, N. C. Gate	602,748	Apr. 19	2002	458	88	400
Harriman, John. (See Harriman, Josiah and J.)	605,479	June 14	777	179	88	1583
Harriman, Josiah, Lowell, Mass. Warp stop-motion for narrow-ware looms						
Harriman, Josiah and J., Lowell, Mass.; said J. Harriman assignor to said Josiah Harriman. Slack-alarm and stop-motion for looms	605,199	June 7	254	59, 60	88	1360
	606,210	June 28	2178	500 501	88	1890
Harriman, Wilbur E., Chatham, N. H. Ironing-table						
Harrington, Emma A., *et al.* (See Woodward, Walter J., assignor.)						
Harrington, Walter E. (See Starr, Charles E., Jr., assignor.)	606,457	June 28	2653	610	88	1915
Harris, Aaron, and C. Stahl, New York, N. Y. Druggist's and medicine label	603,563	May 3	587	180 181	88	714
Harris, Alexander B. B., Bristol, Tenn. Gage-adjusting tie-plate						
Harris Automatic Press Company. (See McNutt, John F., assignor.)	602,133	Apr. 12	967	204	88	189
Harris, Frederic A., A. M. Cupples, and M. McCann, Tyrone, Pa. Car-fender	603,080	Apr. 26	2583	586 587 588	88	534
Harris, George W. and W. R., Lowell, Mass. Machine for making loom-heddles						
Harris, Isidore, *et al.* (See Falkek, Nathan, assignor.)	601,889	Apr. 5	512	106	88	96
Harris, John, Shamokin, Pa. Nut-lock	602,446	Apr. 19	1485	339	88	312
Harris, Marvin A. D., Brooklyn, N. Y. Identification-button						
Harris, Robert, Bridgeport, Conn., and M. K. Goldsmith, New York, N. Y. Mechanism for lowering car-fenders	601,751	Apr. 5	249	49	88	48
Harris, Stephen L. (See Davies, Charles W. T., assignor.)						
Harris, Theodore W., *et al.* (See Luce, Thomas C., assignor.)						
Harris, W. P., *et al.* (See Williston, Benjamin F., assignor.)						
Harris, Wilbur J. (See Harris, William and W. J.)						
Harris, William, Bellebridge, Pa., and W. J. Harris, Mount Pleasant, Ohio. Railway-switch	603,902	May 10	1203	272	88	850
Harris, William R. (See Harris, George W. and W. R.)						
Harrison Bros. & Company. (See Darling, James D., assignor.)						
Harrison, Dora, Lansing, assignor to Harrison Manufacturing Company, Grand Rapids, Mich. Hose-supporter	605,480	June 14	779	179	88	1523
Harrison, Edwin D., Irvington, and C. H. Thurber, East Orange, N. J., assignors to Celluloid Company, New York, N. Y. Producing pyroxylin imitations of mosaic	602,159	Apr. 12	1001	219	88	203
Harrison, George E. (See Longshore-Potts, Anna M., assignor.)						
Harrison, John, assignor to Elliptic Cycle Company, Limited, Peterborough, England. Bicycle-brake	606,166	June 21	2093	481	88	1765
Harrison Machine Works. (See Koch, Jacob F., assignor.)						
Harrison Manufacturing Company. (See Harrison, Dora, assignor.)	601,659	Apr. 5	50	10	88	11
Harrison, William F., West Chester, Pa. Rotary-plug cock						
Harry, Edward. (See Jaixen and Harry.)						
Harshaw, Seth T., Lansingburg, assignor of one-half to Campbell & Clute, Cohoes, N. Y. Loop-cutting attachment for knitting-machines	605,873	June 21	1527	352	88	1680
	605,874	June 21	1528	352 353	88	1680
Hart, Alfred, assignor to F. E. and R. W. Hart, Chicago, Ill. Mower	605,423	June 7	700	156	88	1487
Hart, Andrew H., Winchester, Ky. Voting-machine						
Hart, Edward, assignor to Baker & Adamson Chemical Company, Easton, Pa. Apparatus for distilling acids	603,508	May 3	496	109	88	997
Hart, Frederick E., *et al.* (See Hart, Alfred, assignor.)	605,424	June 7	701	156	88	1488
Hart, Gilbert, Detroit, Mich. Connector for storage-battery plates						
Hart, John W., assignor of one-half to W. J. Kaemmerling, Pittsburg, Kans. Nutmeg-grater	604,751	May 31	2810	642	88	1220
Hart, Michael. (See Grady and Hart.)						
Hart, Peter E. (See Wolfe and Hart.)						
Hart, Ralph W., *et al.* (See Hart, Alfred, assignor.)	603,505	May 3	638	142	88	725
Hart, Sara C., Galveston, Tex. Fly-screen	604,985	May 31	3186	734	88	1302
Hartford, John, San Francisco, Cal. Spirit-level						
Hartig, John C. (See Payment and Hartig.)	606,544	June 28	2810	647 648	88	1946
Harting, John H., Indianapolis, Ind. Turn-table for railways						
Hartjen, John. (See Bürklin, Victor, assignor.)						
Hartley, Edward B. (See Gardner and Hartley.)	603,330	May 3	152	35, 36	88	631
Hartman, John M., Philadelphia, Pa. Blast-furnace iron-notch and appliance	606,139	June 21	3045	468 469	88	1776
Hartman, Joseph P., Pueblo, Colo. Percussion-drill	601,960	Apr. 5	660	138 139	88	194
Hartmann, Wilhelm, Offenbach-on-the-Main, Germany. Barrel-filling apparatus	603,061	Apr. 26	2591	589	88	535
Harton, Pembroke D., Philadelphia, Pa. Cake-machine	606,545	June 28	2815	648	88	1947
Hartranft, Samuel S., Philadelphia, Pa. Furnace-tuyer						
Hartshorn, Edmund F., Newark, N. J., assignor to Stewart Hartshorn Company, of New Jersey. Shade-roller	603,903	May 10	1206	273	88	851
Hartung, Charles C., assignor to E. Walsh, Jr., St. Louis, Mo. Method of and apparatus for rolling plate-glass	602,447	Apr. 19	1487	339	88	312
	605,425	June 7	703	156	88	1488
Harvey, Elmer E., Dolington, Pa. Cover for milk-cans	602,941	Apr. 26	2353	537	88	493
Harvey, John A., Hancock, Md. Protector for trees	603,847	May 10	1109	247	88	830
Harvey, John F., Johnsonburg, Pa. Pocket-knife						
Hasbrouck, Frederick. (See Weber, Theodore A., assignor.)						
Hasbrouck, Josiah. (See Hotaling, William M., assignor.)						
Hasbrouck, Robert M., New York, assignor of one-half to G. W. Thompson, Brooklyn, N. Y. Car-axle	602,539	Apr. 19	1640	374	88	341
	602,077	Apr. 12	846	184	88	172
Hasey, Harvey W., Hempstead, N. Y. Brush						
Haskell, Foster M. (See Campbell and Cummings, assignors.)	602,179	Apr. 12	1039	226	88	207
Haskell, Henry L., Ludington, Mich. Game-board	602,180	Apr. 12	1041	226	88	208
Haskell, Henry L., Ludington, Mich. Game-board	606,140	June 21	2048	469	88	1776
Haskett, James A., Parsons, Kans. Folding egg-crate						
Haskew, Frederick J. T., Stourbridge, England. Jig for securing cycle parts, &c., while being bored or machined	603,379	May 3	229	51	88	644
Haskins, Harry S., and Z. B. Coes, assignors to Edwin Harrington, Son & Company, Incorporated, Philadelphia, Pa. Hoisting apparatus	602,580	Apr. 19	1703	388	88	353

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Haskins, James H., Chicago, Ill. Blank threading and pointing machine	603,506	Apr. 19	1575	360 361	88	880
Hassler, Robert H., Pittsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, of Pennsylvania. Alternating-current electric motor	606,056	June 21	1866	494 495	88	1746
Hastings, Robert E., Philadelphia, Pa. Device for laying gold-leaf	602,985	Apr. 26	2462	558	88	505
Hastings, Robert E., Philadelphia, Pa. Device for laying gold-leaf	602,986	Apr. 26	2494	558	88	505
Hatfield, William L., Green Fork, Ind. Mail-bag crane	604,115	May 17	1634	367	88	997
Hathorn, Fred H., assignor to Hathorn Manufacturing Company, Brewer, Me. Die for rolled forgings	603,637	May 10	730	163	88	758
Hathorn Manufacturing Company. (See Hathorn, Fred H., assignor.)						
Hauff, Firm of J. (See Dieterle, Wilhelm, assignor.)						
Haupt, Carl, Brooklyn, N. Y. Trundle-hoop	603,256	Apr 12	1164	256	88	235
Hauskey, Ole R., Lake Preston, S. D. Milking apparatus	603,616	May 3	690	154	88	784
Hautsch, Anton, Nyack, N. Y. Pan-lifter	602,394	Apr. 12	1275	289	88	257
Haviland, Ebenezer W., Richmond, Ind. Roller-bearing	602,749	Apr. 19	2008	458	88	409
Hawes, George E. (See Adams, Abraham L., assignor.)						
Hawes, Herbert E., assignor to Colby & Co., Brooklyn, N. Y. Thread-trimming device for sewing-machines	603,668	May 10	812	179	88	775
Hawes, S. M., Jr. (See Brigden, Charles H., assignor.)						
Hawke, William W., *et al.* (See Ernst, John C., assignor.)						
Hawkes, Frank F., assignor of two-thirds to E. J. Smith and C. K. Prince, Westfield, Mass. Bicycle-rest	603,134	Apr. 12	996	205	88	189
Hawkins, James E., St. Louis, Mo. Cork-pulling machine	603,950	May 10	1378	291	88	865
Hawkins, John T., Taunton, Mass., assignor to Campbell Printing Press and Manufacturing Company, New York, N. Y. Means for securing printing-plates to cylindrical surfaces	604,149	May 17	1692	380	88	978
Hawkins, John T., Taunton, Mass., assignor to Campbell Printing Press and Manufacturing Company, New York, N. Y. Cushioning apparatus for printing-machines	604,752	May 31	2811	642	88	1289
Hawks, Moses L., Chicago, Ill. Knife, scissors, or skate sharpener	605,289	June 7	447	99	88	1497
Hawley, Charles G. (See Peck and Hawley.)						
Hawley, Charles G., *et al.* (See Shaft and Hays, assignors.)						
Hawley, Delia K., assignor to Rathbun Manufacturing Company, Chicago, Ill. Automatic lighter	602,045	Apr. 5	789	171 516	88	149
	602,908	Apr. 26	2273	519 520	88	476
Haworth, George D., Chicago, Ill. Corn-planter	603,638	May 10	731	163 164	88	759
Hawthorn, John, and J. P. Liddell, Newtown, New Mills, England. Apparatus for washing printers' blankets	603,360	May 3	231	58	88	645
Hay, Alexander G., Philadelphia, Pa. Engine-valve	605,875	June 21	1531	353	88	1681
Hayde, Edmund C., Chicago, Ill. Vehicle-wheel						
Hayden & Derby Manufacturing Company. (See Huber, Jacob, assignor.)	601,881	Apr. 5	398	88	88	74
Hayden, Josiah W., Jr., Boston, Mass. Corner-buffer for trunks	604,321	May 17	2018	451	88	1041
Haye, August, San Antonio, Tex. Apparatus for dispensing oil, &c	606,057	June 21	1891	435	88	1746
Hayes, Ferdinand, New York, N. Y. Scuttle or skylight operator	604,863	May 31	3025	694 695	88	1271
Hayes, George, New York, N. Y. Wheel for bicycles	606,546	June 28	2816	648	88	1947
Hayes, James R. S. (See Manning and Hayes.)						
Hayes, Pryor L., Springfield, Mo. Parlor pool-table	605,712	June 14	1196	276	88	1601
Hayne, Daniel H., *et al.* (See Le Ballister, David N., assignor.)						
Haynes, Henry, assignor of one-half to T. Frost, Philadelphia, Pa. Flushing apparatus.						
Hays, Henry. (See Shaft and Hays.)						
Haywood, Henry, and G. Totten; said Haywood assignor to said Totten; said Totten assignor of one-fourth to H. P. Lowe, Toronto, Canada. Fender for cars	601,901	Apr. 5	661	139	88	124
Hazel Glass Company. (See Henry and Brady, assignors.)						
Hazlette, Herbert S., *et al.* (See Boykin, Christopher C., assignor.)						
Hazlewood, Lee H. (See Ritter and Hazlewood.)						
Heald, Alfred, Philadelphia, Pa. Woven fabric	605,783	June 14	1333	305	88	1626
Hearn, Robert H., Dyer, Tenn. Lock	603,951	May 10	1379	291	88	865
Hearn, William H. (See Wright, Aaron, assignor.)						
Heath, Annie M., London, England. Buttonhole-casing	604,470	May 24	2304	523	88	1115
Heath, Frederick H., Tacoma, Wash. Bicycle-brake	603,331	May 3	154	36	88	621
Heath, Thomas S., Cross Timbers, Mo. Single-wheel sulky and device for attaching horses thereto	605,099	June 7	58	17	88	1363
Heath, Webster L. (See Holmes and Heath.)						
Heatly, Francis T., Camanche, Iowa. Table attachment for chairs or beds	605,100	June 7	59	18	88	1364
Hebaus, Joseph R., assignor of one-half to F. P. Conroy, Butte, Mont. Apparatus for extracting precious metals	603,904	May 10	1207	278	88	851
Heck, William T. (See Field and Heck.)						
Hedgeland, Frederick W., assignor to W. W. Kimball Company, Chicago, Ill. Pneumatic motor	605,876	June 21	1533	353	88	1661
Hedrick, Ira G. (See Waddell and Hedrick.)						
Heelan, Lawrence W., assignor of one-half to W. S. Stone, Dallas, Tex. Inflatable tire	606,141	June 21	2049	469	88	1777
Heer, Isak, Zurich, Switzerland. Thread-tension device	605,101	June 7	60	18	88	1364
Heermans, Thaddeus W., Chicago, Ill. Automatic stop mechanism for elevators	602,660	Apr. 19	1758	423	88	388
Hefel, Toney C., assignor of one-half to C. H. Russey, Muncie, Ind. Filtering plant for waterworks	603,483	May 3	437	97, 98	88	666
Hefner, William H., Rock Hill, S. C. Wheel-tire	604,589	May 24	2405	549	88	1182
Heggem, Charles O., assignor to Russell & Co., Massillon, Ohio. Governor	603,080	Apr. 26	2505	566	88	520
Heidenreich, Karl. (See Kahn and Heidenreich.)						
Heider, John. (See Scherer, Joseph, assignor.)						
Heilbronner Copierbucher Fabrik C. Holzwarth. (See Kahn, Abraham, assignor.)						
Heilmann, Jean J., Paris, France. System of electrical propulsion for vessels	602,225	Apr. 12	1276	262	88	257
Hein, Nicholas, Chilton, Wis. Windmill	603,198	Apr. 26	2764	630	88	570
Heine, Alfred N., and G. A. Nonweiler, Evansville, Ind. Table	604,222	May 17	2015	451	88	1041
Heine, Frederick, Baltimore, Md. Extension-ladder	606,458	June 28	2654	611	88	1915
Heine, Heinrich, Hanover, Germany. Writing-desk	602,226	Apr. 12	1278	262 263	88	258
Heinig, Frederick E., assignor of one-half to C. Pope, Louisville, Ky. Cigar-tip protector	603,639	May 10	733	164	88	759
Heintz, John A., Menomonee, Wis. Protector for tool-handles	606,211	June 28	2160	501	88	1630
Heinzelman, Reginald. (See Timken and Heinzelman.)						
Heiser, Valentine, and S. R. Moyer, assignors of one-third to H. A. Weller, Orwigsburg, Pa. Thread-cutter for sewing-machines	606,010	June 21	1803	415	88	1780
Heitland, John H., Quincy, Ill. Fireplace-heater	605,718	June 14	1199	276	88	1601
Helgeson, Martin and O., Linden, assignors of one-third to R. K. Rasmusson, Lake Crystal, Minn. Combined reel-carrier and feed-cart	601,807	Apr. 5	350	71, 72	88	66

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.

Kloeber, Charles E., Jr. (See Sharratts, David E., assignor.)						
Klose Ball Caster Company. (See Klose, Karl A., assignor.)						
Klose, Karl A., Des Plaines, assignor to Klose Ball Caster Company, Chicago, Ill. Ball-caster	604,400	May 24	2158	495	83	1069
Klotz, Henry D., Garden City, N. Y., assignor to Pendleton Manufacturing Company, Carbondale, Pa. Robbin	602,260	Apr. 12	1166	256	83	1760
Knap, Conrad C. S., London, England. Water-tube boiler	606,153	June 21	2065	474	83	571
Knapp, Edwin C., Syracuse, N. Y. Governor for steam-engines or other motors	603,193	Apr. 26	2772	632	83	331
Knapp, Judson N., Syracuse, N. Y. Tapping apparatus	602,510	Apr. 19	1596	363	83	1164
Knebel, Christian, St. Louis, Mo. Baker's peel	604,619	May 24	2564	585	83	
Kneedler, John D., Sioux City, Iowa, assignor of one-half to J. H. Ball, Oakland, Nebr. Coin-operated mechanism	606,468	June 28	2662	613	83	1917
Kneeland, Remus A., Benton Harbor, Mich. Wheelbarrow	605,316	June 7	493	110	83	1446
Kneisly, Daniel W., Johnsville, Ohio. Mowing-machine	604,255	May 17	2061	466	83	1054
Knickerbacker, John. (See Sulzman, Charles A., assignor.)	603,644	May 10	742	165	83	761
Knight, David W., Newman, Ill. Safety attachment for elevators						
Knight, Edward S., *et al.* (See Sabin, Chauncey R., assignor.)	602,085	Apr. 12	854	186	83	174
Knight, Frank B., Brooklyn, N. Y. Conveying apparatus	601,661	Apr. 5	67	13	83	14
Knight, Henry H., Jane Lew, W. Va. Metal egg-case						
Knight, William B., *et al.* (See Sabin, Chauncey R., assignor.)						
Knoble, Andrew M. (See Kuersten, Hugo R., assignor.)						
Knoble, John F. (See Snedeker, Charles H., assignor.)	605,104	June 7	65	19	83	1264
Knoblock, John C., South Bend, Ind. Pulley	602,541	Apr. 19	1642	374	83	241
Knoll, William, Jersey City, N. J. Device for chalking tips of billiard-cues	604,999	May 31	3190	734	83	1908
Knopping, Louis H., New York, N. Y. Bicycle tool-case	606,550	June 28	2635	653	83	1951
Knottnerus, Henry E., assignor to H. C. Neun, St. Louis, Mo. Automatic gaging-faucet						
Knowles, Elmer L. (See Meigs, Nathan J., assignor.)	604,596	May 24	2512	571	83	1153
Knowles, Mary A., Baildon, England. Car-coupling	602,694	Apr. 19	1787	408	83	366
Knowlton, Dallas, Washington, D. C. Match-safe	603,253	May 3	625	53	83	646
Knutson, Alfred M., Galesburg, Ill. Electric-arc lamp	602,854	Apr. 26	2196	498	83	462
Koblenzer, Martin. (See Fuchs, Gustav, assignor.)						
Koch, Christian H. C., Chicago, Ill. Lubricating device						
Koch, Friedrick A. (See Pattberg, Christian, assignor.)						
Koch, Jacob F., New Athens, assignor to himself, and Harrison Machine Works, Belleville, Ill. Grain-separator	605,497	June 7	716	161	83	1491
Koch, William, Lawrenceburg, Ind. Clothes-line holder	605,607	June 14	1004	231	83	1564
Koebke, Richard. (See Doersch, George M., assignor.)	605,436	June 7	719	162	83	1491
Koehler, Adolph, New York, N. Y. Air-ship	604,684	May 24	2625	604	83	1177
Koelkebeck, Carl W. A., and J. K. Smith, Pittsburg, Pa. Machine for cutting and expanding pipes	605,439	June 7	721	162	83	1492
Koetter, John F. W., St. Louis, Mo. Motor	604,836	May 24	2421	551	83	1135
Köhl, Alexis, Copenhagen, Denmark. Bicycle-lock	604,765	May 31	2630	647	83	1238
Kohl, Charles A., Cleveland, Ohio. Wringer	602,661	Apr. 19	1603	423	83	363
Kohl, Samuel M. W., Philadelphia, Pa. Shutter-fastener						
Kohn, Fritz, *et al.* (See Rausch, Rudolf, assignor.)						
Kohn, Johann (See Duffek, Arthur, assignor.)	604,620	May 24	2565	585	83	1164
Kolb, Bennett J., Florence, and M. Kolb, Newport, Ky. Window-screen	604,969	May 31	3192	735	83	1308
Kolb, Michael. (See Kolb, Bennett J. and M.)						
Koloseus, Max, Chicago, Ill. Fire-escape	602,637	Apr. 19	1614	.....	83	373
König, Ernst, assignor to Farbwerke, vormals Meister, Lucius & Brüning, Höchst-on-the-Main, Germany. Basic red disazo dye	602,638	Apr. 19	1614	.....	83	373
König, Ernst, assignor to Farbwerke, vormals Meister, Lucius & Brüning, Höchst-on-the-Main, Germany. Basic yellow disazo dye	602,639	Apr. 19	1615	.....	83	373
König, Ernst, assignor to Farbwerke, vormals Meister, Lucius & Brüning, Höchst-on-the-Main, Germany. Coppery brown dye	602,640	Apr. 19	1615	.....	83	373
König, Ernst, assignor to Farbwerke, vormals Meister, Lucius & Brüning, Höchst-on-the-Main, Germany. Red-violet basic disazo dye

Metcalfe, Sanford D., Brocton, Ill. End-gate	602,138	Apr. 12	943	206	83	190
Metropolitan Filter Company. (See Tyden, Emil, assignor.)						
Mettauer, John, *et al.* (See Klemm, Hermann A., assignor.)						
Metz, Charles H., and T. Curley, Waltham, Mass. Crank-pedal	604,919	May 31	3091	710	83	1293
Metzger, Jacob J., Cleveland, Ohio. Bicycle-canopy	603,916	May 10	1226	278	83	855
Metzrath, William, Highland Park, N. J. Bicycle-support	606,487	June 28	2697	621	83	1984
Meyer & Cie, C. A. (See Steiger, Eugen, assignor.)						
Meyer, Firm of H. C., Jr. (See Dickhuth, Max P. O., assignor.)						
Meyer, Frederick L., Brooklyn, N. Y. Bottle	604,062	May 17	1534	345	83	948
Meyer, John H., Philadelphia, Pa. Rotary engine	601,854	Apr. 5	450	98	83	65
Meyer, Svend M., Brooklyn, N. Y. Electrical lighting device for kerosene or other burners	604,626	May 24	2574	586, 587	83	1165
Meyrick, Joseph, Jr., Louisville, Ky. Ball-bearing device	603,570	May 3	506	132	83	717
Meyrowitz, Emil B., assignor to Meyrowitz Manufacturing Company, Ridgefield, N. J. Adjustable support for optical instruments	603,148	Apr. 26	2708	613, 614	83	539
Meyrowitz Manufacturing Company. (See Meyrowitz, Emil B., assignor.)						
Meyrowitz Manufacturing Company. (See Vetter, Alexander F., assignor.)						
Michael, Willie F., Enterprise, W. Va. Safety-pin	601,666	Apr. 5	74	15	83	15
Michaelson, Otto H., Charleston, W. Va. Incandescent electric lamp	605,498	June 14	809	187	83	1529
Michalk, Wilhelm, Deuben, Germany. Lubricator	604,409	May 24	2181	486	83	1093
Michel, Firmin, Philadelphia, Pa. Beef-roaster	601,812	Apr. 5	364	75	83	99
Michon, Eugene, Grand Chenier, La. Planter	601,897	Apr. 5	529	109	83	100
Midgley, Thomas, assignor of one-half to Columbus Bicycle Company, Columbus, Ohio. Crank-hanger for bicycles	603,149	Apr. 26	2704	614	83	559
Midland Foundry and Machine Works Company. (See Walker, Thomas C., assignor.)						
Mikesell, Jacob R., Charlotte, Mich. Axle-bearing and hub	605,499	June 14	810	187, 188	83	1529
Milburn, Herschel C., Whiteville, La. Agricultural implement	602,033	Apr. 5	771	167	83	146
Miles, David B., Blackwater, Mo. Cultivator	601,773	May 31	2944	650	83	1235
Miles, H. D., *et al.* (See Williston, Benjamin F., assignor.)						
Millen, George, assignor of one-half to L. Bergstrom, San Antonio, Tex. Wheel	605,112	June 7	76	22	83	1367
Miller, Andrew J., Metamora, Ind. Drying apparatus	605,736	June 14	1232	285	83	1607
Miller, Augustus P., Baltimore, assignor of one-half to C. P. Laurenson, Towson, Md. Device for carrying off cinders and smoke	602,865	Apr. 26	2209	500	83	465
Miller, David, Garden City, Mo. Gate	603,708	May 10	903	222	83	610
Miller, Elijah H. (See Petit and Miller.)						
Miller, Eugene, *et al.* (See Davis, John A., assignor.)						
Miller, Frank R., Springfield, Ill. Knife-sharpener	602,994	Apr. 26	2457	556	83	507
Miller, George, *et al.* (See Fergusson, Alan R., assignor.)						
Miller, George B., assignor to American Ring Company, Waterbury, Conn. Eyelet	605,802	June 21	1566	360	83	1689
Miller, George E. (See Karst, Bernard W., assignor.)						
Miller, George E., assignor of one-half to J. W. Albright, Middletown, Pa. Recessing-tool for lathes	605,184	June 7	227	55	83	1364
Miller, George H., Norwalk, Ohio. Spacer-bar for wire fences	603,772	May 10	956	214	83	808
Miller, George W. (See McPherson, Frank G., assignor.)						
Miller, Henry F., *et al.* (See Fergusson, Alan R., assignor.)						
Miller, Horace E., Newark, N. J., assignor to Celluloid Company, New York, N. Y. Brush	605,185	June 7	229	55	83	1364
Miller, Isaac N., and J. B. Moss, St. Joseph, Mo. Suppository	604,003	May 17	1534	345	83	948
Miller, Jacob W. (See Huber and Miller.)						
Miller, James A., New Haven, Conn. Fortification	603,451	May 3	350	81, 82	83	669
Miller, James S., Reading, Pa. Apparatus for purifying sewage-water	603,221	Apr. 26	2813	542, 543	83	579
Miller, Jannet E., Hinton, W. Va. Curtain-pole ring	605,967	June 21	1719	394	83	1716
Miller, Jeremiah, Cleveland, Ohio. Tube-cutter	605,257	June 7	381	86	83	1423
Miller, Lee A., Milwaukee, Wis., assignor to Wheeler & Wilson Manufacturing Company, Bridgeport, Conn. Bobbin or under-thread case for sewing-machines	601,587	Apr. 5	405	85	83	75
Miller, Louis E., assignor of one-half to W., Jr., and R. H. Lacy, Los Angeles, Cal. Riveting machine	602,130	Apr. 19	944	306, 307	83	191
Miller, Richard, Appleton, Wis. Umbrella-support	602,662	Apr. 19	1065	424	83	393
Miller, Sebastian N., Piedmont, W. Va. Paper-making machine	603,197	Apr. 26	2778	633	83	572
Miller & Son, H. F. (See Schler, Oscar B., assignor.)						
Miller, Thomas H. (See Newstrom and Miller.)						
Miller, Thomas M., assignor of one-half to J. W. Lovatt, Bethlehem, Pa. Elastic horseshoe	602,236	Apr. 12	1121	246	83	225

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.

Moehn, John N., Milwaukee, Wis. Oval holder for toilet-paper	602,995	Apr. 26	2439	556	83	507
Moehn, John N., Milwaukee, assignor of one-half to L. D. Dorschell, Chilton, Wis. Toilet-paper cabinet	606,224	June 28	2217	509	83	1898
Moeller, Julius, London, England, assignor to Welsbach Light Company, Gloucester City, N. J. Mantle or hood for Welsbach or other incandescent lights	605,115	June 7	79	22	83	1367
Moffat, George, New York, N. Y. Rail-bond	604,065	May 17	1537	346	83	948
Mohler, Levi S., Covington, Ohio. Fence-stay	606,069	June 21	1912	440	83	1750
Mohs, Julius, Brandenburg-on-the-Havel, Germany. Valve for pneumatic tires	603,064	Apr. 26	2545	578	83	537
Molacek, Thomas E., *et al.* (See Urbanek, Joseph, assignor.)						
Mole, John G., Batavia, Ill. Grinding-mill	606,630	June 28	2960	686	83	1974
Möllinger, Julius A., and K. Kurda, Nuremberg, Germany. Alternating-current motor-meter	606,225	June 28	2218	509	83	1898
Momand, Ragland, New York, N. Y., assignor to American Lighting Company, of New Jersey. Gas-burner	604,666	May 24	2644	606	83	1179
Monarch Brake-Beam Company. (See Simpson and Hantiges, assignors.)						
Monarch Cycle Manufacturing Company. (See Birner, Charles P., assignor.)						
Monarch Manufacturing Company of Baltimore City. (See Lindemeyr, Philip, assignor.)						
Money-Kent, Julian M. V. (See Pringle, Percival J., assignor.)						
Monfort, Charles P., Leonidas, Mich. Envelop	604,191	May 17	1773	400	83	995
Monk, Thomas A. (See Bailey and Monk.)						
Monnet, Pierre P., Lyons, France. Vessel for containing and administering volatile liquids	604,066	May 17	1538	------	83	948
Monnet, Pierre P., assignor to Société Chimique des Usines du Rhône, anciennement Gilliard P. Monnet et Cartier, Lyons, France. Making pyrocatechin-sulfonic acid	606,470	June 28	2673	------	83	1919
Monnet, Pierre P., assignor to La Société Chimique des Usines du Rhône, anciennement Gilliard P. Monnet et Cartier, Lyons, France. Making chlorin derivatives of toluene						
Monnett, John T., *et al.* (See Reidenbaugh, John, assignor.)						
Monoline Composing Company. (See Scudder, Wilbur S., assignor.)						
Monsees & Larson *et al.* (See Larson and Bransell, assignors.)						
Monteer, Alexander N., Springfield, assignor of one-half to W. A. Nettleton, Kansas City, Mo. Roof-securing device	604,775	May 31	2846	650	83	1236
Montgomery, John F., and W. T. Berry, Oconawattee, Ga. Grain-drill	605,322	June 7	502	111	83	1446
Mood, Asbury F. (See Sparks, James H., assignor.)						
Moores, Thomas J. (See Loomis and Moores.)						
Moon, Frank D., assignor of three-twentieths to L. F. Adams, J. Gaskill, Lockport, and F. S. Jackson, Holland, N. Y. Rotary steam-engine	604,333	May 17	2030	456	83	1045
Moore, Calvin F., Chicago, Ill. Folding cot	606,355	June 28	2470	573	83	1878
Moore, Charles E., and J. Doyle, Chicago, Ill. Car-coupling	605,737	June 14	1234	295, 296	83	1608
Moore, Charles H., *et al.* (See Guest, John H., assignor.)	605,555	June 14	895	208, 209	83	1546
Moore, Charles L., and C. V. Pugh, Bowling Green, Mo. Burial apparatus	604,668	May 24	2078	613	83	1186
Moore, Daniel M., Newark, N. J. Apparatus for producing luminous or similar effects	604,667	May 24	2061	613	83	1186
Moore, Daniel M., Newark, N. J. Circuit-interrupting mechanism	604,669	May 24	2062	614	83	1186
Moore, Daniel M., Newark, N. J. Circuit-interrupter	602,953	Apr. 26	2373	541	83	496
Moore, Daniel M., Newark, N. J., assignor to Moore Electrical Company, New York, N. Y. Electric luminous alphabet and board for same	604,679	May 24	2065	611	83	1183
Moore, Daniel M., assignor to Moore Electrical Company, New York, N. Y. Incandescent-electric-lamp regulator	604,680	May 24	2066	611	83	1184
Moore, Daniel M., assignor to Moore Electrical Company, New York, N. Y. Electric-lamp regulator	604,681	May 24	2068	611	83	1184
Moore, Daniel M., Newark, N. J., assignor to Moore Electrical Company, New York, N. Y. Interrupter for electric-lighting systems	604,682	May 24	2069	611, 612	83	1184
Moore, Daniel M., Newark, N. J., assignor to Moore Electrical Company, New York, N. Y. Magnetic circuit-breaker						

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Moore, Daniel M., Newark, N. J., assignor to Moore Electrical Company, New York, N. Y. Magnetic circuit-breaker	604,683	May 24	2671	612	88	1184
Moore, Daniel M., Newark, N. J., assignor to Moore Electrical Company, New York, N. Y. Automatic vibratory interrupter	604,684	May 24	2673	612	88	1185
Moore, Daniel M., Newark, N. J., assignor to Moore Electrical Company, New York, N. Y. Electric-lighting apparatus	604,685	May 24	2676	612 613	88	1185
Moore, David A., Harvey, assignor to Buda Foundry and Manufacturing Company, Chicago, Ill. Railway-track drill	604,410	May 24	2188	489	88	1098
Moore, Edward J., Philadelphia, Pa. Steam-boiler	605,791	June 14	1352	309 310	88	1629
Moore Electrical Company. (See Moore, Daniel M., assignor.)						
Moore, Elisha, Meductic, Canada. Fishing-reel	603,599	Apr. 19	1714	390	88	854
Moore, Frank L., Chatham, N. J. Fastener for straps	602,604	June 14	1008	233	88	1565
Moore, George, Boston, Mass. Convertible street-railway car	606,176	Apr. 19	1748	398 399	88	360
Moore, George A., and H. J. Rosegrant, Philadelphia, Pa. Sole-laying machine	606,176	June 21	2108	484	88	1788
Moore, Jehiel T., assignor of one-half to H. L. Jenkins, Minneapolis, Minn. Telephone-holder	605,294	June 7	455	101	88	1439
Moore, John C., Eastbourne, England. Harvesting-machine	603,652	May 10	753	167 168	88	763
Moore, John M., Atlanta, Ga. Copying-press	603,414	Apr. 12	1425	322	88	297
Moore, Joseph R., Denver, Colo. Bicycle-stand	602,415	Apr. 12	1427	323	88	297
Mora, Giuseppe, Milan, Italy. Producing copies of oil-paintings	603,583	May 3	545	------	88	706
Moran, George N., *et al.* (See White, Charles S., assignor.)						
Moran, James B., New Haven, Conn. Eyelet-hole-finishing device	604,589	May 24	2516	572	88	1154
Moran, John. (See Morrison and Moran.)						
Morch, John H. (See Weeks, John, assignor.)						
Morcom, John H., assignor to Colorado Iron Works Company, Denver, Colo. Slag-truck	605,506	June 14	922	216	88	1551
Morden, George. (See Young and Morden.)						
Morfoot, Benjamin W., Chicago, Ill., assignor of one-half to H. Ziegfeld, Mount Vernon, N. Y. Key-opening can-head	606,471	June 28	2673	615	88	1919
Morford, Thomas E. (See Burnett, Wesley, assignor.)						
Morgan, Charles, Freeport, Ill. Lemon-squeezer	602,088	Apr. 12	465	188	88	175

Parry, John H. (See Parry and Evans, assignors.)						
Parry, Robert R., and E. Evans, Poultney, Vt., assignors of one-third to J. H. Parry, Utica, N. Y. Dish-cleaner	604,634	May 24	2586	590 / 591	83	1168
Parsons, Francis F., Paterson, N. J. Boiler-furnace	601,880	Apr. 5	501	103	83	94
Parsons, George W., assignor of one-third to F. S. Rich, Newton, Iowa. Self-feeder for threshing-machines	605,904	June 7	273	63, 64	83	1401
Parsons, John H., assignor of one-half to C. W. Gooding, A. D. and C. Warner, Jr., Wilmington, Del. Rotary engine	605,906	June 21	1586	364	83	1692
Parsons, John H., assignor of one-half to C. W. Gooding, A. D. and C. Warner, Jr., Wilmington, Del. Rotary engine	605,907	June 21	1586	365	83	1692
Parvillée, Louis, Paris, France. Fabricating metallooceramic resistances	602,227	Apr. 12	1112	------	83	234
Pasler, Heinrich. (See Hagemann and Pasler.)						
Patchel, Robert R., assignor of one-half to C. S. Newcomb, Cambridge, Mass. Tripod-stand for cameras, &c	606,022	June 21	1826	421	83	1734
Patchett, Samuel, Easton, Md. Fastening device	605,510	June 14	825	192	83	1532
Patent Folding Perambulator Company. (See Legge, William, assignor.)						
Patentaktiebolaget Svea. (See Schenson, Elis G. A., assignor.)						
Pattberg, Christian, assignor to F. A. Koch, Brooklyn, N. Y. Tonsilotome	606,078	June 21	1937	444	83	1755
Pattee, Joseph O. (See Vaughan and Pattee.)	606,232	June 28	2232	513	83	1831
Patten, James S., Baltimore, Md. Dust-guard for car-axle boxes	601,815	Apr. 5	366	76	83	69
Patterson, Andrew W., Aurora, Mo. Ore-separator	604,198	May 17	1777	400 / 401	83	996
Patterson, John C., Philadelphia, Pa. Bottle	602,100	Apr. 12	885	192	83	179
Patterson, Reubin C., Summit, Ga. Axle-bearing for vehicle-wheels	604,235	May 17	2043	457 / 458	83	1046
Paul, Andrew G., Boston, Mass. Steam-heating system						
Paul, N. S. (See Bell, Fred C., assignor.)	605,003	May 31	2321	702	83	1398
Paulen, Jacob W., assignor of one-half to G. G. Council, Williamsville, Ill. Farm-gate	606,079	June 21	1938	444	83	1755
Paulis, John A., St. Louis, Mo. Buggy-top-bow support	604,635	May 24	2591	591 / 592	83	1168
Pavyer, James G., St. Louis, Mo. Apparatus for casting type						

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Payette, Joseph, Worcester, Mass. Ash-sifter	603,704	May 10	837	185	83	780
Payment, Francois X., and J. C. Hartig, Chicago, Ill. Window-frame	605,335	June 7	523	117	83	1422
Payne, Joseph T., Sweet Springs, Mo. Safety-pin	601,961	Apr. 5	690	146	83	131
Payne, Lewis A., assignor of one-half to M. V. Davis, San José, Cal. Bicycle pump attachment	606,023	June 21	1926	421	83	1734
Peak, Leo D. (See Brown and Peak.)	606,060	June 21	1939	444 / 445	83	1755
Pearce, William J., assignor of one-half to J. A. Hurth, Clinton, Ind. Rotary engine	606,575	June 28	2062	600	83	1957
Pearl, Azariah Y., Lebanon, Me. Auger	603,656	May 10	759	169	83	764
Pearson, Edward F. H., *et al.* (See Kinney, Israel, assignor.)						
Pearson, Fred S., Boston, Mass. Conduit for railways	603,587	May 3	550	121	83	706
Pearson, John R. (See Rosander and Pearson.)						
Pearson, Walter G., Newburyport, Mass. Feed-mixer	602,194	Apr. 12	1058	231 / 232	83	213
Pease, Edward L., Darlington, England. Portable house	606,233	June 28	2234	513	83	1851
Pease, George R., Jamestown, N. Y. Wall-book	604,077	May 17	1564	360	83	953
Pease, Roger S., Rose, assignor, by mesne assignments, of one-half to J. U. Miner, Minneapolis, Minn. Apparatus for controlling temperature	603,734	May 10	895	197	83	789
Peck, Arthur Z., and C. G. Hawley, Minneapolis, Minn.; said Hawley assignor to said Peck. Bicycle-seat	602,906	Apr. 12	1174	258	83	237
Peck, Laura A., Geneva, N. Y. Blackboard-cleaner	604,784	May 31	2658	653 / 654	83	1236
Peckham, Edgar, New York, N. Y. Car-truck	606,206	June 28	2249	543	83	1855
Peckham, Harry G. (See Gill, John, assignor.)						
Pedersen, Henry, New York, N. Y. Window-sash	602,564	Apr. 19	1675	381	83	347
Peeples, George, Philadelphia, Pa. Insulated pipe-coupling						
Pehl, Wilhelm. (See Schleidt and Pehl.)						
Peirce, Stephen H. (See Parmenter and Peirce.)	601,962	Apr. 5	691	147	83	131
Peirson, Martin, Bristol, Conn. Watchcase	605,557	June 14	899	209	83	1546
Pell, Harry S., Toronto, Canada. Pulley	603,026	Apr. 26	2403	565	83	517
Pell, Henry K. and H. W., Rome, N. Y. Wagon-spring						
Pell, Henry W. (See Pell, Henry K. and H. W.)						
Pendleton, Gurdon, Jr., assignor to Pendleton Manufacturing Company, Carbondale, Pa. Bobbin	602,240	Apr. 12	1130	248	83	227
Pendleton, Gurdon, Jr., assignor to Pendleton Manufacturing Company, Carbondale, Pa. Bobbin	602,241	Apr. 12	1131	248	83	227
Pendleton Manufacturing Company. (See Klots, Henry D., assignor.)						
Pendleton Manufacturing Company. (See Pendleton, Gurdon, Jr., assignor.)						
Pendry, William A., Detroit, Mich. Button-blank-cutting machine	601,675	Apr. 5	86	18	83	18
Penfield, William A., assignor to Bradley & Hubbard Mfg. Co., Meriden, Conn. Wick-lifting device	605,186	June 7	220	56	83	1394
Péniakoff, Dmitry A., Huy, Belgium. Aluminium sulfid and making same	606,576	June 28	2267	------	83	1958
Péniakoff, Donitry A., Selzaete, Belgium. Making alkaline aluminates	603,657	May 10	761	------	83	765
Penn, William E., assignor to F. B. Fargo & Company, Lake Mills, Wis. Milk measuring and discharging machine	604,261	May 17	1803	434 / 435	83	1017
Penn, William E., and C. S. Brown, assignors to F. B. Fargo & Company, Lake Mills, Wis. Churn and butter-worker	604,262	May 17	1803	435 / 436	83	1019
Penner, William F., Richardsville, Ky. Metallic cross-tie	606,577	June 28	2268	660	83	1958
Pennsylvania Globe Gas Light Company. (See Wilson, Thomas, assignor.)						
Pennsylvania Salt Manufacturing Company. (See Reese and Armstrong, assignors.)						
Pennsylvania Salt Manufacturing Company. (See Reese and Armstrong, assignors.)						
Peoples, William, assignor to Enterprise Manufacturing Company of Pennsylvania, Philadelphia, Pa. Clamp for securing pumps to barrels	604,263	May 17	1906	426	83	1080
Pepin, Hector, Victor, Colo. Dump for ore-buckets	601,909	Apr. 5	540	111	83	102
Peraglie, Martino, and F. Barro, New York, N. Y. Soap-holder	606,084	June 21	1830	422	83	1735
Perfection Labeling Machine Company. (See Blaisdell, James M., assignor.)						
Perkins, William C., Rocky Hill Station, Ky. Car-coupling	602,359	Apr. 12	1330	295 / 296	83	266
Perkins, William C., Rocky Hill Station, Ky. Car-coupling	602,914	Apr. 26	2297	523 / 524	83	480
Perkins, William C., Rocky Hill Station, Ky. Car-coupling	606,207	June 28	2252	544	83	1856
Perkins, Willis J., Grand Rapids, Mich. Screw-propeller	603,794	May 10	905	223	83	810
Perks, Archibald F., Port Hope, Canada, assignor of one-half to W. R. Sullivan, Alma, Mich. Gold-separating machine						
Perren, William, *et al.* (See Drawe, Jennie, assignor.)						
Perrin, William H., assignor of one-half to J. R. Lavell, Smith's Falls, Canada. Sulky-plow	605,298	June 7	468	104	83	1440
Perroté, Eugène, Sandwich, Mass. Frying-pan and lifter	603,857	May 10	1125	258	83	835
Perrottet, Marie L., New York, N. Y. Corset-shield	605,299	June 7	464	104	83	1440
Perrottet, Marie L., New York, N. Y. Dish-drainer	605,336	June 7	594	117	83	1453
Perry, Earle C., assignor to Indiana Manufacturing Company, Jeffersonville, Ind. Waffle-iron	603,101	Apr. 19	897	198	83	179
Perry, Joel C., South River, N. J. Water-faucet	606,025	June 21	1831	422	83	1735
Perry, John F., Chicago, Ill. Bottle-stopper	605,908	June 21	1589	365	83	1668
Perry, Levi B., and J. C. Mitchell, assignors of three-twentieths to H. E. Chase, Lewiston, Me. Fifth-wheel for railway-cars	605,305	June 7	276	64	83	1402
Perry, Nathaniel V., Falls Church, Va., assignor to N. V. Perry Manufacturing Company, Hartford, Conn. Metal-working machine	603,994	May 10	1355	309	83	980
Perry, William H., Hamilton, Canada. Game-board	603,358	Apr. 12	1329	295	83	267
Person, Paul, Stockton, Cal. Bicycle-support	606,578	June 28	2269	660	83	1958
Pervilhac, Henry, Lyons, France. Plaiting-machine	604,889	May 31	2047	474	83	1255
Pesant, Alfonso, Brooklyn, N. Y. Crushing-roll	606,224	June 28	2265	518	83	1851
Peterfish, Millard F., Staunton, Va. Collapsible egg-crate	602,627	Apr. 19	1700	408	83	368
Peters Cartridge Company. (See Peters, Gershom M., assignor.)						
Peters Cartridge Company. (See Place, William B., assignor.)						
Peters, Edwin R. (See Peters, George B. and E. R.)	605,909	June 21	1590	365 / 366 / 367	83	1698
Peters, George B. and E. R., Emporia, Kans. Calculating-machine						
Peters, Gershom M., assignor to Peters Cartridge Company, Cincinnati, Ohio. Wad-placing mechanism for cartridge-machines	605,258	June 7	393	87, 88	83	1494
Petersen, Emil B., Kearny, N. J. Heat or cold indicator	605,129	June 7	104	27	83	1371
Peterson, Adolphus, Lansdowne, Pa. Pattern-exhibitor	606,235	June 28	2236	514	83	1851
Peterson, Adolphus, Lansdowne, Pa. Automatic myrioscope	606,236	June 28	2237	514	83	1852
Peterson, Jesse, assignor to United Indurated Fibre Company, Lockport, N. Y. Baking-varnish	604,735	May 31	2031	------	83	1239
Peterson, John E., Washington, D. C. Remedial appliance	602,236	Apr. 12	1113	244	83	234
Peterson, John G., New Britain, Conn. Striking mechanism for bells	605,046	Apr. 26	2516	570	83	523

Porritt, Josiah, San Francisco, Cal. Engine	608,645	Apr. 19	1995	416	88	375
Porter, Henry, New York, N. Y. Door spring and check	608,735	May 10	897	197	88	799
Porter, Horatio A., Holyoke, Mass. Bicycle-seat attachment	608,956	Apr. 26	2378	542	88	497
Porter, Louis H., Rockdale, Tex. Apparatus for cooling milk	604,514	May 17	1812	407	88	1002
Porter, Robert L., and J. D. Faulkner, Galena, Kans. Ice-cream freezer						
Porter, Wilson E., assignor to New Haven Clock Company, New Haven, Conn. Hammer for striking clocks	605,744	June 14	1343	287	88	1609
	605,992	June 7	396	75	88	1413
Posh, Charles E., Winfield, Kans. Attachment for rubber shoes	608,519	Apr. 19	1605	----	88	385
Postlethwaite, Charles E., London, England. Compound for cleaning wood						
Poteet, Sam B., *et al.* (See Doyle, George M., assignor.)						
Potter, Gideon. (See Vail and Potter.)	606,022	June 21	1944	447	88	1756
Potter, John A., Cleveland, Ohio. Regenerator	608,226	May 3	73	19	88	615
Potthoff, Louis, Flushing, N. Y. Electroplating apparatus						
Pottier & Stymus Company. (See Johnston, Johns S., assignor.)						
Pouncy, Charles H., *et al.* (See Pouncy, John H., assignor.)						
Pouncy, John H., Quito, assignor of one-half to C. H. and W. D. Pouncy, Shelby county, Tenn. Swing	608,182	Apr. 26	2708	615	88	560
Pouncy, William D., *et al.* (See Pouncy, John H., assignor.)	606,084	June 21	1945	447 446	88	1757
Poupon, Charles, Eagle Lake, Fla. Extension-table	608,686	Apr. 19	1791	409	88	369
Powell, David C., assignor of one-half to E. J. Powell, Michigan City, Ind. Grater	608,995	May 10	1961	209	88	862
Powell, Edward J. (See Powell, David C., assignor.)						
Powell, George G., Cleveland, Ohio. Handle-bar for bicycles						
Powell, James, Avondale, assignor to William Powell Company, Cincinnati, Ohio. Lubricator	604,265	May 17	1908	427	88	1020
Power Eyeletting Machine Company. (See Field, Seymour, assignor.)						
Power, Nicholas, New York, assignor to P. Braender, White Plains, N. Y. Differential piston-valve	608,983	May 10	1937	220	88	856
Prahl, Charles, assignor of three-fourths to Levy, Dreyfus & Co., New York, N. Y. Repeating watch	608,086	Apr. 5	776	166	88	147
Prange, Leo. (See Daniels, William H., assignor.)						
Prasse, Oscar C., West New Brighton, N. Y. Electric lantern	601,758	Apr. 5	263	51	88	50
Pratt, Charles C., *et al.* (See Pratt, William T. C., assignor.)						
Pratt, Charles E., assignor, by mesne assignments, to International Register Company, Chicago, Ill. Fare-register	605,912	June 21	1602	368 369 370	88	1695
Pratt, Emmeline A., *et al.* (See Pratt, William T. C., assignor.)						
Pratt, Emmeline F., *et al.* (See Pratt, William T. C., assignor.)	608,588	Apr. 19	1718	391	88	355
Pratt, Eugene E., Andover, S. D. Folding box	608,770	Apr. 19	2063	460 461	88	415
Pratt, Nathaniel P., Atlanta, Ga. Exhauster						
Pratt, William T. C., deceased; W. H. Babcock, Washington, D. C., administrator, assignor to E. A., E. F., and C. C. Pratt, Sneyd Park, and M. A. B. Wreaford, née Pratt, Portsea, England. Railway signaling apparatus	604,711	May 31	2735	695	88	1215
Prendergast, William H., assignor of one-half to C. D. Kline, Savannah, Ga. Metallic packing	608,736	May 10	899	198	88	790
Prescott, De Witt C., Duluth, Minn., assignor to York Structural Steel Company, New York, N. Y. Rolling apparatus	606,474	June 28	2677	616	88	1919
Prescott, Eugene A., Kingston, N. H. Ironing-board	608,267	Apr. 12	1177	268	88	227
Prescott, Frank C., Canton, N. Y. Carousel	608,438	May 3	396	73	88	668
Prescott, George W., Highland, Cal. Oil-burning locomotive	606,257	June 28	2638	514 515 516	88	1889
Prescott, George W., Highland, Cal. Burner for liquid hydrocarbons	606,258	June 28	2643	517 518	88	1889
Prescott, George W., Highland, Cal. Burner for pulverized coal	606,259	June 28	2645	519 520	88	1889
Prescott, George W., Highland, Cal.	606,240	June 28	2649	520	88	1884
Prescott, Robert W., Cleveland, Ohio. Atomizer	601,676	Apr. 5	22	19	88	19
Prescott, Samuel A., Wilkinsonville, Mass. Brick-cleaning machine	604,194	May 17	1778	401	88	906
Prest, John E., Cohoes, N. Y. Spinning and twisting machine spindle	608,188	Apr. 12	1093	226 227	88	206
Preston, Edwin J., and A. B. Gill, assignors to J. Stone & Co., London, England. Dynamo for electric-car-lighting systems	606,087	June 21	1899	452	88	1735
Prewett, William, Cheriton, England. Reflector attachment for lamps or lanterns	604,500	May 24	2058	535	88	1134
Price, Andrew M., Lincolnton, N. C. Stop mechanism for doubling and twisting machines.						
Price, Theodore H. (See Hamerschlag and Price.)						
Prichard, George S., and J. W. Taylor, Goldsborough, N. C., assignors of one-fifteenth to J. E. Smith, Washington, D. C. Bag-stringing machine	608,915	Apr. 26	2606	594	88	461
Prichard, Wells H. (See Durant and Prichard.)						
Priddy, S. N. E. (See Marvin, Russell, assignor.)	604,226	May 17	2046	458	88	1047
Pridmore, Henry E., Chicago, Ill. Cord-knotter for self-binding harvesters	604,227	May 17	2050	459	88	1047
Pridmore, Henry E., Chicago, Ill. Cord-knotting device	608,809	Apr. 19	2113	477	88	480
Pridmore, John W., Chicago, Ill. Grain-adjuster for harvesters						
Pridmore, John W., and E. A. Johnston, Chicago, Ill., assignors to McCormick Harvesting Machine Company. Bundle-carrier for corn-binders	606,579	June 28	2871	661	88	1908
Pries, Charles F. (See Tyler and Pries.)	608,737	May 10	899	198	88	790
Priestley, Frank, Sioux Rapids, Iowa. Rotary engine						
Prince, Clarence K., *et al.* (See Hawkes, Frank F., assignor.)	608,843	May 3	174	40	88	685
Pringle, John N., Milledgeville, Pa. Brake-shoe	608,148	Apr. 12	958	209 210	88	198
Pringle, Percival J., assignor of one-half to J. M. V. Money-Kent, London, England. Supply system for electric railways	605,011	May 31	2880	763	88	1811
Pringle, Robert, London, England. Gas-stove for cooking purposes, &c						
Printing Telegraph News Company. (See Joy, John M., assignor.)	605,013	May 31	2881	763 744	88	1811
Prins, William H., Austin, assignor to Saladin Pneumatic Malting Construction Company, Chicago, Ill. Apparatus for drying malt	605,796	June 14	1899	311	88	1630
Prisk, John N., Johnstown, Pa. Trolley-pole	605,856	June 14	1418	288	88	1661
Pritchard, Albert R., Rochester, N. Y. Vessel-handle

Reeves Pulley Company. (See Reeves, Milton O., assignor.)						
Reflector Syndicate. (See Cowper-Coles, Sherard O., assignor.)						
Reich, Henry O., and C. I. Van Dyke, Lattimer Mines, Pa. Hand-stamp	602,957	Apr. 26	2379	542	88	497
Reichel, Emil B. W., Berlin, Germany, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Switching device and circuit arrangement for electrically-propelled vehicles	605,013	May 31	2333	744	88	1312
Reichel, Emil B. W., and F. W. V. Stein, Berlin, Germany, assignors to Siemens & Halske Electric Company of America, Chicago, Ill. Mounting for electric motors	605,679	June 14	1149	265	88	1590
Reid, Douglas, New Richmond, Wis. Folding egg-crate	602,473	Apr. 19	1530	348	88	821
Reid, Randolph H., assignor of one-half to J. McCormick, Philadelphia, Pa. Mud-guard	606,359	June 28	2474	575	88	1679
Reid, Robert, assignor of one-fourth to S. M. Hallstrom, Beverly, and J. F. Hendrickson, Boston, Mass. Machine for cutting out and channeling soles	603,966	May 10	1304	295 300	88	870
Reid, Robert T., and J. L. McDonnell, assignors of one-half to F. C. Cardin and J. T. Bibb, Tacoma, Wash. Telephone system	605,341	June 7	546	122	88	1457
Reidenbaugh, John, assignor of one-half to E. C. Dresher and J. T. Monnett, Marion, Ohio. Hydrocarbon-burner	603,740	May 10	894	199	88	791
Reifsnyder, Andrew, Marcus Hook, Pa. Plow	606,243	June 28	2351	530	88	1635
Rein, Bernard, assignor of one-half to Red Cross Cement and Rubber Company, Rochester, N. Y. Brazing apparatus	604,080	May 17	1568	351	88	954
Rein, Bernard, assignor of one-half to Red Cross Cement and Rubber Company, Rochester, N. Y. Vulcanizer	604,788	May 31	2266	655	88	1240
Reinhard, John N., St. Louis, Mo. Adjustable shade-support	603,104	Apr. 12	691	198	88	180
Reinhardt, Henry L., Wheeling, W. Va. Glass-mold	605,138	June 7	119	29 30	88	1373
Reissmann, Frederick, West Point, N. Y. Frame clamp and support	604,160	May 17	1709	365	88	962
Reliance Dry Kiln Company of Baltimore City. (See Emerson, Victor L., assignor.)						
Renrew, Charles L., East Windsor, Conn. Electric railway-signal	605,798	June 14	1368	312 313	88	1631
Rensselaer Manufacturing Company. (See Rowe, Ellis L., assignor.)						
Renwick, Thomas, Miami, Canada. Game apparatus	602,187	Apr. 12	1050	229	88	211
Rens, Carl J., New York, N. Y. Fountain attachment for penholders	606,360	June 28	2475	575	88	1679
Replogle, Mark A., Akron, Ohio. Mechanical speed-governor	603,345	May 3	176	41	88	696
Replogle, Mark A., Akron, Ohio. Electrical governor	604,544	May 24	2426	553	88	1167
Replogle, Mark A., Akron, Ohio. Speed-governor	605,014	May 31	2355	744	88	1312
Reuleaux, Josef. (See Laughlin and Reuleaux.) (Reissue.)						
Reuter, Oscar. (See Groom, John, assignor.)	605,514	June 14	881	198	88	1533
Reuterberg, John, Two Harbors, Minn. Combination-lock	603,689	Apr. 19	1911	435	88	993
Reymond, James, and A. Poincenot, St. Imier, Switzerland. Screw-cutting machine	604,502	May 24	2302	536	88	1125
Reynolds, Edward W. (See Fisher and Reynolds.)						
Reynolds, Edwin, Milwaukee, Wis. Stamp-mill	603,289	Apr. 5	2651	650	88	586
Reynolds, Frank S. (See Cowles and Reynolds.)						
Reynolds, Harry A. (See Kellogg, Thomas E., assignor.)						
Reynolds, Horace J., Corning, Iowa. Cooling vessel	604,696	May 24	2302	542	88	1166
Reynolds, James F., Lynn, assignor to L. C. Chase & Co., Boston, Mass. Device for repairing rubber tires	604,840	May 31	2048	674	88	1256
Reynolds, John R., Hartford, Conn. Governing mechanism for throttle-valve closers	604,789	May 31	2306	655	88	1240
Reynolds, Oliver B., Brockton, Mass. Dumping-wagon	604,790	May 31	2271	656	88	1241
Rhind, Frank, assignor of one-half to Bridgeport Brass Company, Bridgeport, Conn. Coupling	606,427	June 28	2307	501	88	1306
Rhine, Minnie, Philadelphia, Pa. Safety-pin	602,771	Apr. 19	2036	461	88	416
Rhoades, Alonzo E., Hopedale, Mass., assignor to Draper Company, Hopedale, Mass., and Portland, Me. Warper-comb	604,480	May 24	2319	526 527	88	1118
Rhodes, Jay B., assignor to F. C. Austin, Chicago, Ill. Impact-tool	603,775	May 10	939	214	88	803
Rice, Frank. (See Sears and Rice.)						
Rice, James T., Cleveland, Ohio. Extension gas-chandelier	604,636	May 24	2306	502 503	88	1160
Rice, John H., assignor to Leighton Machine Company, Manchester, N. H. Knitting machine	604,841	May 31	2050	674 675	88	1256
Rice, John V., Jr., assignor to John V. Rice, Jr., Company, Edgewater Park, N. J. Naphtha-retort	604,266	May 17	1910	497	88	1021
Rice, Joseph S., and F. W. Beittenmiller, Philadelphia, Pa. Overhead switch	604,980	May 31	2008	710	88	1284
Rich, Elmer M., Silverton, Colo. Ore-concentrator	606,580	June 28	2372	661	88	1959
Rich, Fred S. (See Parsons, George W., assignor.)						
Rich, John E., East Chain, Minn. Scraper for roadwork or ditching	605,250	June 7	360	88	88	1496
Rich, Louis F. C., Cheltenham, England, assignor to himself, and J. H. Hull, New York, N. Y. Tool for boring conical holes						
Richards, Angie. (See Richards, William S., assignor.)	602,861	Apr. 12	1328	296 297	88	208
Richards, Benjamin F., Chicago, Ill. Window	603,105	Apr. 12	693	194	88	180
Richards, Francis H., Hartford, Conn. Actuating mechanism for sewing-machine loopers.						

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Richards, Francis H., Hartford, Conn. Weighing-machine	606,343	June 28	2362	521 522	88	1665
Richards, Frank, New York, N. Y. Valve for air-compressors	602,473	Apr. 19	1531	348	88	821
Richards, Frank, New York, N. Y. Air-compressor	606,498	June 28	2008	601	88	1906
Richards, Hubert P., New Britain, Conn. Tension device	602,532	Apr. 19	1608	368	88	836
Richards, John W., Muscatine, Iowa. Awning	602,772	Apr. 19	2037	461	88	416
Richards, Joseph B., Thomson, Ga., assignor of one-half to L. E. Steinmann, New York, N. Y. Tag-fastener	603,365	May 3	905	47	88	641
Richards, Joseph W., and C. W. Roepper, Bethlehem, Pa. Producing chemical compounds by electrolysis	602,872	Apr. 26	2218	.....	88	467
Richards, Joseph W., and C. W. Roepper, Bethlehem, Pa. Electrolytically manufacturing metallic sulfids	602,873	Apr. 26	2220	.....	88	467
Richards, Morgan. (See Williams, Thomas, and Richards.)						
Richards, Willard F. (See Wilhelm and Richards.)						
Richards, Willard F., assignor to C. M. Gould, Buffalo, N. Y. Electric-lighting system for railway-cars	604,081	May 17	1570	351	88	955
Richards, Willard F., assignor to C. M. Gould, Buffalo, N. Y. Electric-lighting system for railway-cars	604,082	May 17	1572	351	88	955
Richards, Willard F., assignor to C. M. Gould, Buffalo, N. Y. Electric-lighting apparatus for railway-cars	604,083	May 17	1574	352	88	955
Richards, Willard F., assignor to C. M. Gould, Buffalo, N. Y. Electric-lighting apparatus for railway-cars	604,084	May 17	1576	352 353	88	956
Richards, Willard F., assignor to C. M. Gould, Buffalo, N. Y. Electric-lighting apparatus for railway-cars	604,085	May 17	1578	353	88	956
Richards, William E., New York, N. Y. Handle	604,880	May 31	2032	696	88	1272
Richards, William S., assignor to A. Richards, Albany, Oreg. Routing-machine	605,155	June 21	2066	475	88	1780
Richards, Windsor E., Wilkinsburg, Pa. Air-indicator for bicycle-tires	602,242	Apr. 12	1132	249	88	227
Richardson, Henry B., Keytesville, Mo. Lock	605,342	June 7	552	123	88	1458
Richardson, John W., London, England. Saddle for velocipedes	602,523	Apr. 19	1610	368	88	836
Richardson, Julius C., assignor of two-thirds to E. Wende and L. H. Van Allen, Buffalo, N. Y. Nail-making machine	602,566	Apr. 19	1678	381 382	88	848
Richardson, Orrin, Clipper Gap, Cal. Step-ladder	603,579	May 3	607	135	88	719
Richardson, Samuel T., assignor of one-third to A. E. Holland, Baltimore, Md. Mechanical movement	604,417	May 24	2198	491	88	1095
Richardson, William S., Boston, Mass. Fastener for gloves, &c	605,883	June 14	1432	329	88	1644
Richardson, William S., Boston, Mass., assignor to Ball and Socket Fastener Company, Boston, Mass., and Nashua, N. H. Fastener	G34,637	May 24	2593	592	88	1160
Richmond Locomotive and Machine Works. (See Davis, Ezekiel F. C., assignor.)						
Richter, Adolf, Rudolstadt, Germany. Mechanical musical instrument	605,134	June 7	120	30, 31	88	1374
Richter, Frederick W., Chicago, Ill. Scrubbing appliance	601,678	Apr. 5	97	19	88	21
Richter, Otto F., Holyoke, Mass. Branch-pipe-holding device for plumbers' use	605,613	June 14	1014	234	88	1566
Richter, Reinhold, Reichenberg, Austria-Hungary. Apparatus for cutting double-pile fabrics	604,701	May 24	2714	620 621	88	1192
Rickard, Clyde A., and E. N. Long, Seville, Ohio. Treating tobacco-leaves	604,338	May 17	2053	.....	88	1048
Rickard, James R. (See Woolf, Brown, and Rickard.)						
Rickards, William T. (See Carley and Rickards.)						
Ricketts, Adellie, Monte Vista, Colo. Dish-cleaner	603,158	Apr. 26	2709	616	88	560
Riddle, Edward C., Browning, Mo. Mechanical movement	605,015	May 31	2328	745	88	1312
Riddle, Morton, Jr. (See Owen, Elerson P., assignor.)						
Riehl, Peter, Jr., Pittsburg, Pa. Hose-coupling	603,366	May 3	906	47	88	641
Rigdon, Berryan C., and S. Dobson, near Lake Butler, Fla. Stump-puller	605,891	June 28	2551	587	88	1890
Rigg, James, London, England. Oscillating tippler	603,048	Apr. 26	2519	572 573	88	529
Riggleman, Howard H., New London, Conn. Drawers-supporter	602,958	Apr. 26	2380	542 543	88	497
Riggs, Adolphus, Kennett, Mo. Saw-gumming machine	605,515	June 14	832	193 194	88	1533
Righter, Thomas M., trustee. (See Edgar, Butler, assignor.)						
Righter, Thomas M., and G. Jeffryes, Mount Carmel, Pa. Pipe-wrench	602,229	Apr. 12	1115	245	88	224
Riker, Andrew L., New York, N. Y. Electric motor or dynamo	604,842	May 31	2059	675 676	88	1256
Riker, Andrew L., New York, N. Y. Former for winding armature-coils	604,843	May 31	2053	676	88	1257
Riley, John W., Ogden, Utah. Safety-envelop	603,969	May 10	1308	300	88	870
Riley, Michael, London, Ohio. Railway-tie	605,333	June 7	327	75	88	1413
Riley, Michael, London, Ohio. Frogless switch	606,095	June 21	1958	449	88	1739
Rinehart, George B. (See Beeman, William S., assignor.)						
Ring, Byron, San Francisco, and B. W. Stickney, Oakland, Cal. Renewing matrices	604,123	May 17	1646	369	88	969
Ringström, August V., Orebro, assignor to N. E. Frykholm, Stockholm, Sweden. Grinding, abrading, or cutting material and preparing same	604,569	May 24	2466	566	88	1146
Rink, William E., Newark, N. J. Tuck-creaser	601,857	Apr. 5	466	94	88	67
Rinke, Bert, Detroit, Mich. Beer-pipe cleaner	604,791	May 31	2272	656	88	1241
Ripley, Prentiss T., Cambridge, Mass. Coupling for bicycles	605,790	June 14	1306	313	88	1638
Rising, Bradley D., *et al.* (See Wheat, Allen A., assignor.)						
Rising, Bradley D., Springfield, assignor of two-thirds to C. McKernon and A. A. Wheat, West Springfield, Mass. Rotary bleaching-boiler	604,086	May 17	1580	353	88	956
Ritchie, Harvey W. (See Ritchie, John and H. W.)						
Ritchie, John and H. W., Cook county, Ill. Hydraulic steering mechanism for vessels	601,679	Apr. 5	100	20	88	21
Ritchie, Lizzie. Patchogue, N. Y. Washboard	603,410	May 3	998	64	88	655
Rittenhouse, Charles T. (See Bellman and Rittenhouse.)						
Ritter, Frank, Rochester, N. Y. Dental chair	605,974	June 21	1738	397 398	88	1718
Ritter, Hiram K., Reading, Pa. Clamp for rails	604,792	May 31	2272	656	88	1241
Ritter, John L., Shenandoah, and L. H. Hazlewood, Richmond, assignors to said Ritter and J. G. Whitlock, Shenandoah, Va. Heating-stove	602,474	Apr. 19	1533	348 349	88	821
Ritter, Solomon H., Pottsgrove, Pa. Plow attachment	606,244	June 28	2363	522	88	1638
Riverside Iron Works. (See Boyd, Peter, assignor.)						
Riviere, Walter P., Taylor, Tex. Stovepipe	606,581	June 28	2372	662	88	1959
Rix, Edward A., San Francisco, Cal. Air-valve	602,170	Apr. 12	1016	228	88	204
Rix, Edward A., San Francisco, Cal. Pneumatic pumping-engine	605,167	June 7	231	56	88	1304
Roach, Henry B., Paris, assignor of one-half to G. F. and F. O. Hicks and J. Hale, Lamar county, Tex. Washing-machine	602,567	Apr. 19	1668	383	88	849
Roach, Thomas N., Fort Wayne, Ind. Plumb-level	602,874	Apr. 26	2221	508	88	467
Robbins, Charles F., Aldrich, Ala. Hook and eye	601,816	Apr. 5	368	77	88	69
Robbins, Edward S., Parker, S. D. Display-rack	605,016	May 31	2340	745	88	1313
Robbins, George B. (See Norling and Johnson, assignors.)						
Roberts, Albert E., Norwalk, assignor of one-half to J. H. Clauss, Fremont, Ohio. Fence-making machine	604,905	May 31	2066	705	88	1276

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Roberts, Albert E., Norwalk, assignor of one-half to J. H. Clauss, Cleveland, Ohio. Fence-making machine	604,906	May 31	3068	705	88	1279
Roberts, Charles E., Oak Park, Ill. Tool for dressing emery-wheels	602,106	Apr. 12	805	194	88	181
Roberts, George I., New Rochelle, N. Y. Steam-separator	604,844	May 31	2955	677	88	1257
Roberts, George P., Fremont, Ohio. Chalk-holder	601,779	Apr. 5	306	60	88	58
Roberts, John R., Homer City, Pa. Incubator	603,859	May 10	1127	253 / 254	88	835
Roberts, Woodbury D., Portland, Oreg. Lock. (See Bowne, John D., assignor.)	602,144	Apr. 12	966	211	88	194
Robertson, James L. (See McBurney and Robertson.)						
Robertson, William M. (See McBurney and Robertson.)						
Robertson, William T., Washington, D. C., assignor to J. T. Underwood, Brooklyn, N. Y. Type-writer	605,516	June 14	883	194	88	1533
Robinson, Cornelia S., New York, N. Y. Garbage-closet	606,067	June 21	1954	449	88	1759
Robinson, Edward H. (See Robinson, Robert and E. H.)	605,975	June 21	1783	399	88	1719
Robinson, Frank E., New York, N. Y. Binder for leaves						
Robinson, George H. (See Hesse, Gustaf E., assignor.)						
Robinson, John G., Warsaw, Ky. Automatic wagon-brake	605,135	June 7	122	31	88	1374
Robinson, Robert and E. H., Chicago, Ill. Hot-air furnace	605,517	June 14	834	194	88	1533
Robinson, Robert J., and W. A. Nelden, Salt Lake City, Utah. Wave-motor	606,632	June 28	2908	687	88	1975
Robinson, Walter H., New York, N. Y., and E. J. Lawless, Orange, N. J. Wrench	605,746	June 14	1245	288	88	1600
Robischung, Henry B., Kalamazoo, Mich., assignor to Chicago Railway Equipment Company, Chicago, Ill. Brake-beam	605,800	June 14	1367	313	88	1632
Roby, Giles C. (See Roby, Leroy H. and G. C.)	602,773	Apr. 19	2099	462	88	417
Roby, Leroy H. and G. C., Fostoria, Ohio. Convertible piano stool and chair	602,584	Apr. 19	1613	360	88	336
Rockey, Glendon M., and C. H. Strain, Dayton, Ohio. Combination-tool						
Rockwell, Stephen L. (See Brackett, Cephas W., assignor.)	604,217	May 17	1816	408	88	1002
Rockwood, George I., Worcester, Mass. Hot-blast radiator						
Rodgers, Ashmead G. (See Humphrey, Walter B., assignor.)	604,845	May 31	2958	677	88	1257
Rodler, Edmond, New York, N. Y. Non-refillable bottle	605,914	June 21	1612	371	88	1697
Roemheld, Jules E., Chicago, Ill. Pinion-bracket for turn-tables						
Roepper, Charles W. (See Richards and Roepper.)						
Roesch, Alfred, Bridgeport, Conn., assignor to Davis & Roesch Temperature Controlling Company, of New Jersey. Temperature-regulator	602,107	Apr. 12	806	194	88	181
Roesch, Alfred, Bridgeport, Conn., assignor to Davis & Roesch Temperature Controlling Company, of New Jersey. Diaphragm-chamber	602,108	Apr. 12	808	195	88	182
Rogers, Elizabeth. (See Burnham, George H., assignor.)						
Rogers, Frank F. (See Eyster, Elmer E., assignor.)						
Rogers, George B., *et al.* (See Elliott, Thomas, assignor.)	603,970	May 10	1309	300	88	871
Rogers, James P., Kyle, Tex. Automatic bench clamp and dog	602,959	Apr. 26	2261	543	88	498
Rogers, John, Kansas City, Kans. Lubricating journal-box						
Rogers, Thomas J. (See McNeil and Rogers.)						
Rogers, William, Leechburg, assignor of one-half to J. A. Beaver, Bellefonte, Pa. Process of and apparatus for manufacturing tin-plate	604,195	May 17	1779	401	88	996
Röhl, Hermann, and H. Usedom, Neubrandenberg, Germany. Apparatus for removing butter, &c	604,194	May 17	1647	369	88	969
Rohlin, John, assignor of one-half to A. E. Shaw, Eureka, Kans. Nut-lock	606,562	June 28	2874	662	88	1950
Rohn, George T., Hersman, Ill. Car-coupling	606,563	June 28	2875	662	88	1950
Rohrer, William W. (See Walters and Rohrer.)						
Roland, W. R. (See Dove, Thoms F., assignor.)						
Rolator, Joseph B. (See Barber and Ashby, assignors.)	605,586	June 14	961	223	88	1557
Rollins, George H., Pittsville, Wis. Stump-extractor	605,915	June 21	1613	371	88	1697
Rollins, Robert W., Hartford, Conn. Electric clock-controlled switch mechanism	603,015	Apr. 26	2470	561	88	513
Rolph, Henry E., assignor of one-half to J. D. Burt, St. Paul, Minn. Brake for vehicles						
Rom, Hermann von. (See Henkel and Rom.)						
Romaine, De Witt, *et al.* (See Johansson, Gustaf, assignor.)						
Romans, John G. W., Weymouth, and A. D. Grover, Malden, Mass. Fraud-preventing device for coin-controlled machines	603,741	May 10	896	199	88	791
Rome Metallic Bedstead Company. (See Merritt and Groff, assignors.)	601,680	Apr. 5	101	20	88	22
Romuender, William, Milwaukee, Wis. Detachable sash	605,188	June 7	253	56	88	1395
Rondell, Carl, Minneapolis, Minn. Bundle-carrier for bicycles						
Roney, Alexander B., assignor to himself and J. Roney, Chicago, Ill. Drum-wind elevator	603,599	May 3	645	144	88	737
Roney, James. (See Roney, Alexander B., assignor.)	603,541	May 3	554	122	88	708
Rood, Charles F., Ford, Ky. Sawing-machine	605,135	June 7	194	31, 33	88	1375
Rooney, Patrick B., New York, N. Y. Bed						
Roop, Amos. (See Brandon and Roop.)						
Roop, Perry, *et al.* (See Doyle, George M., assignor.)	602,407	Apr. 12	1414	319	88	265
Roos, Edward, assignor to Beatty Felting Co., Mishawaka, Ind. Wool boot	602,109	Apr. 12	900	.....	88	188
Roos, Israel, Frankfort-on-the-Main, Germany. Making salts of paramidophenol						
Root, Charles T., *et al.* (See Mitchell, Frank H., assignor.)						
Roper, Charles F., Hopedale, Mass., assignor to Draper Company, Portland, Me. Apparatus for making crank-shafts	604,207	May 17	1911	428	88	1021
Rosander, Robert A. W., and J. R. Pearson, assignors of thirteen-twentieths to F. C. Gaffney, Brooklyn, N. Y. Cash-register	601,681	Apr. 5	102	20	88	22
Rosbrook, Charles J., and S. Burnham, Dixon, Ill. Curtain for vehicles	602,519	May 3	508	110	88	698
Roscher, Gustav, *et al.* (See Kleber, Emil, assignor.)						
Rose, Downs & Thompson. (See Hopwood, John H., assignor.)						
Rose, Georges. (See Rose, Henri and G.)	605,432	June 7	740	168	88	1495
Rose, Henri and G., Poissy, France. Granulating-disk						
Rosegrant, Harry J. (See Moore and Rosegrant.)						
Rosenbaum, Morris. (See Kelso and Rosenbaum.)	604,218	May 17	1817	408	88	1003
Rosenberg, Albert, Baltimore, Md. Spittoon	606,561	June 28	2477	575	88	1660
Rosenberg, Albert, Baltimore, Md. Water-motor						
Rosenberg, Meyer, Brooklyn, N. Y. Device for preventing fraudulent refilling of bottles	604,545	May 24	2429	554	88	1138
Rosenblatt, Nicholas, and S. Abscharumoff, St. Petersburg, Russia. Elastic wheel for carriages	602,154	Apr. 26	2710	616	88	560
Rosenbluth, Edwin M., Philadelphia, Pa. Lantern	606,026	June 21	1894	433	88	1736
Rosensteel, William W., Mineral Ridge, Ohio. Car-wheel	603,600	May 3	646	144	88	727
Rosler, Isidor, assignor to Lehmann & Mann, Berlin, Germany. Accumulator-plate	604,418	May 24	2104	493	88	1096
Ross, Archis L., assignor of one-half to D. Hyams, New York, N. Y. Bag-closure	605,343	June 7	554	122	88	1456
Ross, Finlay W., Birtle, Canada. Automatic switch	606,302	June 28	2538	567	88	1800
Ross, George P. (See May, Joseph B., assignor.)	602,875	Apr. 26	2233	508	88	497
Ross, James K., Springfield, Ohio. Cartridge-shell	606,490	June 28	2708	623	88	1925
Ross, Jesse W., New Orleans, La. Plow	606,501	June 28	2757	545	88	1857
Ross, Simon Cincinnati, Ohio. Shoe-upper turning and beading machine

Rowlands, William E., Seacombe, England. Making fertilizers	603,206	Apr. 26	2760	636	88	575
Rowley, John T., Beaver Falls, Pa. Producing hollow ingots	605,899	June 14	1419	324	88	1642
Rowling, Arthur L., Waukegan, Ill. Milk-strainer						
Royal, Belford G., assignor of seven-ninths to R. H. Reeve, Camden, A. C. and E. S. Wood, Cinnaminson, N. J., and E. R. Johnson, Philadelphia, Pa. Grain cleaning and scalping machine	604,702	May 24	2717	621	88	1198
Royer, William E., Painter Creek, Ohio. Fence-stay	601,682	Apr. 5	106	21	88	23
Royston, Ernest R., Liverpool, England. Velocipede	606,302	June 28	2358	545 / 546	88	1858
Ruby, Charles W., Brooklyn, N. Y. Hose rack or support	603,207	Apr. 26	2790	637	88	575
Rudasill, Eli A., Shelby, N. C. Water-motor	601,905	Apr. 5	547	118	88	104
Rudolph, Charles, and G. Levavasseur, Paris, France. Flexible metallic pipe	605,887	June 14	902	223	88	1558
Rudolph, Christian, assignor to Firm of K. Oehler, Offenbach-on-the-Main, Germany. Blue azo dye	601,859	Apr. 5	471	.....	88	98
Ruff, Joseph, Chicago, Ill. Car-brake	606,535	June 28	2879	663	88	1960
Ruggles, William B., Bayoune, N. J. Drying apparatus	603,208	Apr. 26	2791	637	88	575
Ruhland, John F., Wellston, Mo. Railway-switch	603,707	May 10	843	187	88	781
Rumpel, Julius, Weston, Mo. Automatic alarm-cell	603,980	Apr. 26	2283	543	88	498
Rumpf, Heinrich C., Dahlhausen, Germany. Apparatus for manufacturing railway-spikes	604,891	May 24	2519	573	88	1154
Rumph, Eugene M., Marshallville, Ga. Planter	602,364	Apr. 12	1336	296	88	209
Rumsey, Emmett D. (See Adriance, Cornelius B., assignor.)						
Runkel, Friedrich. (See Kahn and Runkel.)						
Rusch, Henry A., deceased, Newark, N. J. (S. E. Rusch, administratrix,) assignor of one-half to N. Schroder, Brooklyn, N. Y. Bicycle-saddle	606,031	June 21	1841	434	88	1737
Rusch, Sarah E., administratrix. (See Rusch, Henry A.)	606,945	June 28	2264	522	88	1836
Ruscher, Alfred, Bruck-Ujfalu, Austria-Hungary. Car-coupling	602,110	Apr. 12	901	195	88	188
Rushworth, William M., and T. Higginbottom, Lowell, Mass. Spindle-bearing	601,966	Apr. 5	694	148	88	131
Russ, Hiram P., assignor of one-half to F. C. Taber, Addison, N. Y. Rocker attachment	603,433	May 3	330	74	88	663
Russell, Benjamin F., Fandon, Nebr. Draft-equaliser						
Russell & Co. (See Heggem, Charles O., assignor.)						
Russell & Erwin Manufacturing Company. (See Leppert, Henry, assignor.)						
Russell & Erwin Manufacturing Company. (See Russell, Henry E., assignor.)						
Russell & Erwin Manufacturing Company. (See Urban, Anton, assignor.)						
Russell & Erwin Manufacturing Company. (See Voight, Henry G., assignor.)						
Russell, George E. (See Russell, William H. and G. E.)						
Russell, Henry E., assignor to Russell & Erwin Manufacturing Company, New Britain, Conn. Latch	606,946	June 28	2266	523	88	1899
Russell, John H., assignor of one-half to J. H. Giles, Amsterdam, N. Y. Paper-box-making machine	604,546	May 24	2441	554 / 555	88	1198
Russell, Theo. (See Lowe, Milton H., assignor.)						
Russell, William H. and G. E., Hasbrouck Heights, N. J. Apparatus for manufacturing carbureted hydrogen	603,408	Apr. 19	1415	320	88	295
Russell, William M., New York, N. Y. Locomotive	604,421	May 24	2285	507	88	1118
Russell, William M., assignor to M. C. Baker, Chicago, Ill. Binder for loose sheets	605,916	June 21	1617	372	88	1686
Russey, Charles H. (See Hefel, Toney C., assignor.)	603,411	May 3	289	64	88	655
Rutschman, Francis S., Philadelphia, Pa. Machine for plotting soap						
Ruwell, William F., *et al.* (See Bouton, Samuel, assignor.)	603,988	May 3	75	19	88	616
Ryan, Andrew, Grand Rapids, Minn. Snap-hook	605,917	June 21	1618	372	88	1686
Ryan, Austin, Preston, Canada. Tire	605,680	June 14	1143	265	88	1560
Ryan, James B., New York, N. Y. Bed-bottom						
Ryan, Michael C., Oswego, N. Y., assignor to Oswego Crate Company, of New York. Crate-corner	603,409	Apr. 19	1417	320	88	295
Ryan, Thomas W., Concord, Mass. Automatic shut-off ball-cock	603,080	Apr. 26	2405	565	88	518
Ryan, Thomas W., Concord, assignor of one-half to J. H. Walsh, Boston, Mass. Self-sealing bottle	603,705	May 10	997	228	88	811
Rybold, Louis, New York, N. Y. Broom-holder	602,943	Apr. 19	1128	249	88	336
Ryder, Benjamin P., New York, N. Y. Bicycle-frame	603,269	May 3	76	20	88	616
Ryer, John C. (See Schmidt, Julius H., assignor.)						
Ryley, Alfred G., Memphis, Tenn. Heating-stove	603,748	May 10	899	200	88	791
Ryon, Eppa H., assignor of one-half to A. M. Goodale, Waltham, Mass. Spindle-support	602,171	Apr. 12	1018	228	88	205
S. S. White Dental Manufacturing Company. (See Browne and Kennedy, assignors.)						
S. S. White Dental Manufacturing Company. (See Evans, Warren R., assignor.)						
S. S. White Dental Manufacturing Company. (See Hollingsworth, Merrill W., assignor.)						
S. S. White Dental Manufacturing Company. (See How, Woodbury S., assignor.)						
S. S. White Dental Manufacturing Company. (See Vogt, Henry G., assignor.)						
Sabin, Chauncey R., assignor of two-thirds to W. B. and E. S. Knight, St. Louis, Mo. Combined burglar-alarm and lock	605,344	June 7	556	126	88	1402
Sachs, Stanislaw, Berlin, and H. Jaffe, Parchim, Germany. Exercising apparatus	605,747	June 14	1046	239	88	1610
Sackett, Howard T., Fond du Lac, Wis. Bicycle-support	602,370	Apr. 12	1180	269	88	327
Safety Car Heating and Lighting Company. (See Dixon, Robert M., assignor.)	603,680	Apr. 19	1702	409	88	969
Sager, James H., Rochester, N. Y. Angle-gearing

Sanborn, Karen C., Brooklyn, N. Y. Ventilating attachment for windows	606,098	June 21	1955	449	88	1759
Sandberg, Charles, *et al.* (See Ecker, Herman, assignor.)						
Sanders, C. W., *et al.* (See Woodward, Walter J., assignor.)						
Sanderson, William H., assignor to National Computing Scale Company, Cleveland, Ohio. Platform-scale	601,861	Apr. 5	503	108	88	94
Sandford, Lawson, *et al.* (See Hachenberg, Louis, assignor.)						
Sandiford, John, Sr., Wyndmoor, Pa. Brake	605,801	June 14	1366	313	88	1632
Sandiford, William, assignor of one-half to P. M. Kimmey, Chicago, Ill. Lathe-dog	602,606	Apr. 19	1751	399	88	361
Sandow, Eugen, London, England. Electric muscular-exerciser	602,774	Apr. 19	2044	468	88	417
Sanford, Charles E. (See Deegan, Daniel J., assignor.)						
Sanford, Pardon B., Fall River, Mass. Yarn guide, tension, and clearer	605,918	June 21	1630	372	88	1699
Sanger, Ella M. (See Toepfer, William G., assignor.)						
Sargeant, John F., Bracknell, England. Handle-bar for cycles	603,542	May 3	556	123	88	708
Sargent & Company. (See Sargent, Henry B., assignor.)						
Sargent & Company. (See Shaw, John H., assignor.)						
Sargent, Frederick G., Graniteville, Mass. Ducker for wool-washing machines	605,653	June 14	1096	252	88	1561
Sargent, Henry B., assignor to Sargent & Company, New Haven, Conn. Bolt-case	602,371	Apr. 12	1182	250	88	236
Sargent, James F., Saugus, assignor to H. M. Sylvester, Melrose, Mass. Window-awning	604,097	May 17	1592	354	88	957
Sargent, Justin B., West Lebanon, N. H. Nut-lock	603,050	Apr. 26	2523	573	88	523
Sater, Hans H., assignor to Janesville Machine Company, Janesville, Wis. Sulky-plow	606,032	June 21	1843	424	88	1737
Saucier, John R., New Iberia, La. Ball-bearing	606,491	June 28	2705	623	88	1926
Sauer, Theodor B., Oberreifenberg, Germany. Pipe-hanger	603,994	May 10	1239	281	88	856
Sauerbrey, Christian, assignor of one-half to T. D. Gere, Owego, N. Y. Device for attaching fenders to cars	606,156	June 21	2068	475, 476	88	1781
Saunders, John C. (See Owens, John A., assignor.)						
Saunderson, George, *et al.* (See Taylor, Charles, assignor.)						
Savage, Arthur C. (See Cooper, John A., assignor.)						
Savage, George C., assignor to Bernson Manufacturing Company, New York, N. Y. Bicycle-chain adjustment	602,545	Apr. 19	1649	375	88	342
Saville, Jason. (See Waite and Saville.)						
Saw, Charles, Philadelphia, Pa. Apparatus for carbonating and bottling malt liquids	601,735	Apr. 5	219	43	88	42
Sawyer, Albert H. (See Gardiner, Joseph B., assignor.)						
Sawyer, Orren A., and M. M. Lahue, Lowell, Mass.; said Sawyer assignor to said Lahue. Protector stop mechanism for looms	603,800	May 10	1130	254	88	836
Sawyer Spindle Company. (See Stimpson, Wallace I., assignor.)						
Sawyer, Theodore, Towanda, Ill. Gate	605,748	June 14	1947	260	88	1610
Sayer, Robert C., Bristol, England. Car-coupling	603,995	May 10	1363	310	88	862
Saylor, Franklin G., Boston, Mass. Steam or hot-water grate and generator	604,066	May 17	1568	354, 355	88	967
Sayre, Thomas E., Janesville, Wis. Box-fastener	605,919	June 21	1629	372	88	1699
Scarborough, Josiah S., New Philadelphia, Ohio. Oiling device	606,308	June 28	2260	546	88	1658
Scarth, John W., Pudsey, and W. A. Thornton, Wetherby, England. Apparatus for generating acetylene gas	605,137	June 7	126	29	88	1375
Schaake, Henry, New Westminster, Canada. Can ending or heading machine	605,180	June 7	234	56, 57	88	1395
Schaedle, Mathias, *et al.* (See Wurthner, Jacob, assignor.)						
Schaerges, Carl F. M., and P. Schwarz, assignors to F. Hoffmann-La Roche & Co., Basle, Switzerland. Making alkaline acetosulfanilate	602,646	Apr. 19	1886	------	88	375
Schaerges, Carl F. M., and P. Schwarz, assignors to F. Hoffmann-La Roche & Co., Basle, Switzerland. Acetyl derivative of phenetidin	602,690	Apr. 19	1912	------	88	392
Schafer, Louis, St. Louis, Mo. Apparatus for recrimping crown-seals for bottles	602,916	Apr. 26	2202	525	88	481
Schaffer, Morse B., St. Louis, Mo. Car-truck	603,457	May 3	373	81, 85	88	672
Schager, Carl H., Stockholm, and J. M. J. Lundin, Wärtan, Sweden. Lock for railway-switches	606,362	June 28	2478	575, 576	88	1880
Schaill, Michael S., assignor of one-half to G. H. Melly and S. M. Brice, Lima, Ohio. Disconnecting-coupling for pull-rods	602,087	Apr. 5	778	168, 169	88	147
Schairer, John J., Clint, assignor of forty-nine one-hundredths to F. E. Hunter, El Paso county, Tex. Fruit-jar and can opener	606,587	June 28	2666	668	88	1961
Schaub, Jacob, Salt Lake City, Utah. Photographic-plate holder	603,972	May 10	1312	301	88	871
Schaum, Otto W., Philadelphia, Pa. Centrifugal machine	605,017	May 31	2242	745	88	1313
Scheinkman, Bernard, New York, N. Y. Self-retaining splint	602,917	Apr. 26	2203	525	88	482
Schellinger, Isaac M., Royersford, Pa. Demijohn	604,089	May 17	1586	355	88	968
Schenson, Ellis G. A., Arbra, assignor to Patentaktiebolaget Svea, Stockholm, Sweden. Feeder for scutching-machines	606,476	June 28	2679	617, 618	88	1920
Schepman, Frederick W. (See Northall and Schepman.)						
Scherer, Joseph, assignor to himself and J. Helder, Buffalo, N. Y. Hand clamping device for molding-flasks	605,347	June 7	562	124	88	1460
Scherff, Edmund, *et al.* (See Kleber, Emil, assignor.)						
Schermerhorn, James B., Malden, N. Y. Medicine-dropper	603,973	May 10	1313	301	88	871
Scheuber, August W., assignor to M. Zinn, New York, N. Y. Combined belt-buckle and purse or bag	603,974	May 10	1314	301	88	871
Schier, Oscar B., assignor to H. F. Miller & Son, Baltimore, Md. Apparatus for pasteurizing and sterilizing milk, &c.	605,990	June 21	1621	373	88	1699
Schild, Peter J., Ionia, Mich. Wire fence	601,986	Apr. 5	695	146	88	151
Schindehütte, Ernst J., McKee's Rocks, Pa. Rail-joint	606,089	June 21	1956	450	88	1760
Schindlers Brothers. (See Eisenberg, Christian, assignor.)						
Schirra, Julius, *et al.* (See Wurthner, Jacob, assignor.)						
Schlachter, Philipp, Streator, Ill. Fluid-pressure motor	606,304	June 28	2368	546, 547	88	1856
Schleicher, Frank J., assignor to St. Louis Paper Box Company, St. Louis, Mo. Can	602,775	Apr. 19	2045	462	88	418

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Schleidt, Adam, and W. Pehl, Wiesbaden, Germany; said Pehl assignor to said Schleidt. Cock	605,018	May 31	2343	745	88	1313
Schluder, Gustav, Deuben, Germany. Means for keeping glass clear in regenerative glass furnaces	602,111	Apr. 12	908	195	88	188
Schmahl, John A., assignor to S. M. Schmahl, Fairman, Ill. Railway-tie	602,336	Apr. 12	1362	309	88	276
Schmahl, Sarah M. (See Schmahl, John A., assignor.)						
Schmid, Charles, Brussels, Belgium. Making artificial musk	602,961	Apr. 26	2365	------	88	498
Schmid, Jakob, assignor to Society of Chemical Industry, Basle, Switzerland. Bismuth-oxyiodin tannate	604,571	May 24	2491	------	88	1149
Schmidt, Edward J. (See Ashley, Silas R., assignor.)						
Schmidt, Erich, and A. F. Schneider, New York, N. Y. Coin-operated lock for vehicle-wheels	605,749	June 14	1949	299	88	1611
Schmidt, Friedrich. (See Steinike and Schmidt.)						
Schmidt, Herman B. (See Joslin and Schmidt.)						
Schmidt, Herman C., New York, N. Y. Water-tower	602,344	Apr. 12	1133	249, 250	88	226
Schmidt, Jacob, Rio Vista, Cal. Compressed-air hammer	602,196	Apr. 12	1064	233	88	214
Schmidt, Julius H., assignor to J. C. Ryer, Bayonne, N. J. Cigarette-making machine	603,488	May 3	445	99, 100, 101, 102	88	667
Schmidt, Oscar, *et al.* (See Hochspeier, William F., assignor.)						
Schmidt, Robert E., Elberfeld, Germany, assignor to Farbenfabriken of Elberfeld Company, New York, N. Y. Dark-green alizarin derivative	603,659	May 10	768	------	88	705
Schmidt, Robert E., Elberfeld, Germany, assignor to Farbenfabriken of Elberfeld Company, of New York. Anthraquinone dye	605,568	June 14	925	------	88	1551
Schmidt, Robert E., and P. Tust, Elberfeld, Germany, assignors to Farbenfabriken of Elberfeld Company, of New York. Blue anthraquinone dye	605,921	June 21	1894	------	88	1699
Schmidt, Wilhelm, Ballenstedt, Germany. Apparatus for regulating superheated steam	604,547	May 24	2444	555	88	1139
Schmitt, Henry J., Hoboken, and R. Bonnell, Elizabeth, N. J. Valve	604,598	May 24	2520	573	88	1184
Schmitt, Martin, Caborn, Ind. Horseshoe-nail clencher and hoof-trimmer	603,975	May 10	1315	302	88	872
Schmitt, Thomas F., Fairview, Kans. Portable grain-elevator	603,776	Apr. 19	2046	463	88	418
Schmitz, Theodore H., Philadelphia, Pa. Window structure	604,866	May 31	3003	689, 690	88	1266
Schmitz, Theodore H., Philadelphia, Pa., assignor to Philadelphia Safety Window Company, Camden, N. J. Window structure	602,245	Apr. 12	1138	250	88	229
Schmunk, Charles E., Pittsburg, Pa. Apparatus for manufacturing articles of glassware	604,908	May 31	3076	706, 707	88	1280
Schmunk, Charles E., Pittsburg, assignor of one-half to W. S. McKee, Allegheny, Pa. Apparatus for manufacturing glassware	604,907	May 31	3070	705, 706, 547	88	1279
Schneckloth, Henry, Holstein, Iowa. Acetylene-gas generator	606,305	June 28	2363	548	88	1859
Schneible, Joseph, New York, N. Y. Collecting gas from fermenting liquors	604,125	May 17	1643	370	88	969
Schneider, Adolph F. (See Schmidt and Schneider.)						
Schneider, Carl, Brooklyn, N. Y. Attachment for sewing-machines	604,161	May 17	1712	386	88	982
Schneider, Friedrich W., assignor to Electricitäts-Gesellschaft Triberg, Gesellschaft mit Beschränkter Haftung, Triberg, Germany. Secondary battery	602,172	Apr. 12	1019	234	88	205
Schneider, Gustav J., Sheboygan, and K. F. G. Brenner, Kaukauna, Wis. Blackboard	604,423	May 24	2202	494	88	1097
Schneider, John B., assignor to H. G. Hagey, St. Louis, Mo. Sheet-metal stove-leg	604,630	May 24	2520	573	88	1184
Schneider, Joseph, assignor of one-half to W. Wolff, San Francisco, Cal. Game-counter	603,514	May 3	506	110	88	668
Schneider, Louis H., Brooklyn, N. Y. Rivet-setting machine	603,743	May 10	1010	200	88	791
Schneider, Richard, Dresden, Germany. Furnace for working zinc and lead	605,808	June 14	1309	314	88	1632
Schock, Gustav, New York, N. Y. Barrel-washer	605,198	June 7	128	32, 33	88	1376
Schock, Gustav, New York, N. Y. Barrel-washer	605,199	June 7	131	33, 34	88	1376
Schoeffel, George J. (See Colgate, Arthur E., assignor.)						
Schofield, James D., Dallas, Tex. Planter	602,173	Apr. 12	1020	224	88	205
Schofield, James D., assignor to Texas Implement and Machine Company, Dallas, Tex. Adjustable cultivator-tooth seat	605,140	June 7	124	34	88	1377
Schoen, Charles T., Philadelphia, Pa. Bolster for railway-cars	604,794	May 31	2875	657	88	1942
Schoettle, Ferdinand, deceased, Philadelphia, Pa.; M. A. and W. C. Schoettle, executors. Machine for making paper tubes	604,090	May 17	1567	356, 357	88	968
Schoettle, Mary A., *et al.*, executors. (See Schoettle, Ferdinand.)						
Schoettle, William C., *et al.*, executors. (See Schoettle, Ferdinand.)						
Scholes, Edmondson. (See Hancock and Scholes.)						
Scholey, William A., and F. C. Schrader, Philadelphia, Pa. Cap for bottles	606,588	June 28	2367	668	88	1961
Schottmuller, Joseph. (See Fritschle, Emil, assignor.)						
Schou, Christian W., Antvorskov, Denmark. Tiled roof	605,760	June 14	1851	389	88	1611
Schou, Gunerius, Christiania, Norway. Magazine bolt-gun	604,498	May 24	2208	494	88	1097
Schrader, Albert. (See Baxter and Schrader.)						
Schrader, Frank C. (See Scholey and Schrader.)						
Schrader, George H. F., New York, N. Y. Tire-valve or the like	604,434	May 24	2209	495	88	1099
Schrader, George H. F., New York, N. Y. Tire-valve, &c	604,435	May 24	2211	495	88	1099
Schreiner, Clara, Brownville, Nebr. Soap-receptacle	605,976	June 21	1734	399	88	1719
Schrender, Jens G., Edgewood Park, assignor to Union Switch and Signal Company, Swissvale, Pa. Signal	606,429	June 28	2609	601, 602	88	1906
Schroder, Nicholas. (See Rusch, Henry A., assignor.)						
Schroeder, Henry F., Cleveland, Ohio. Hydraulic pump	602,666	Apr. 19	1871	435	88	364
Schroedter, Richard, Chicago, Ill. Wheel and axle for vehicles	602,475	Apr. 19	1535	349	88	333
Schuetz, Charles, Newark, N. J. Clip for drop-light wires	601,860	Apr. 5	471	95	88	88
Schule, Friedrich H., Hamburg, Germany, assignor to P. Jones, New Hanover county, N. C. Grain-polishing apparatus	605,922	June 21	1625	373	88	1699
Schule, Friedrich H., Hamburg, Germany, assignor to P. Jones, New Hanover county, N. C. Drum for glazing grains, &c	605,923	June 21	1626	373	88	1700
Schule, Friedrich H., Hamburg, Germany, assignor to P. Jones, New Hanover county, N. C. Oscillating support for shaking-sieves	605,924	June 21	1626	374	88	1700
Schultz, Fred P., New York, N. Y. Shoe-lace fastener	604,126	May 17	1650	370	88	970
Schultz, Louis, assignor to L. Schultz, New York, N. Y. Stop-motion for sewing-machines	602,576	Apr. 26	2293	508	88	467
Schultz, Louise. (See Schultz, Louis, assignor.)						
Schultz, Walter W., assignor to Wayne Works, Richmond, Ind. Seeding-machine	605,348	June 7	564	125	88	1460
Schulze, Frederick. (See Schulze, Robert and L. F., assignors.)						
Schulze, Gustav, Eisleben, Germany. Cement roofing-tile	605,654	June 14	1097	258	88	1581
Schulze, Leon F. (See Schulze, Robert and L. F.)						
Schulze, Robert and L. F., assignors to F. Schulze, Cleveland, Ohio. Ball-grinding machine	602,265	Apr. 12	1340	299	88	370
Schumacher, Johann K., Wermelskirchen, Germany. Selvage-weaving device for looms	602,266	Apr. 12	1343	299	88	371

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Schuman, James B., Columbia, assignor to Pneumatic Elevator and Weigher Company, Indianapolis, Ind. Pneumatic elevator	603,995	May 10	1240	261 / 262	83	857
Schunck, Jacob M., and A. L. Zender, Celina, Ohio. Movable-top writing-desk	603,090	June 21	1957	450	83	1760
Schureman, David S., Rockford, Ill. Water-closet	604,548	May 24	2447	556	83	1139
Schussler, George, San Francisco, Cal. Water-filter	603,708	May 10	845	187	83	781
Schwabe, Georg, Biala, Austria-Hungary. Shuttle-box-operating mechanism for looms	604,089	May 24	2050	607 / 606	83	1180
Schwartz, Henry P., Rolla, Mo. Ax	604,943	May 31	2122	716	83	1200
Schwarz, Arthur, Berlin, Germany. Photographic-printing apparatus	601,892	Apr. 5	504	104	83	95
Schwarz, Arthur, Berlin, Germany. Photographic-printing apparatus	601,893	Apr. 5	506	104	83	95
Schwarz, Charles L. (See Garis, David V., assignor.)						
Schwarz, Paul. (See Schaerges and Schwarz.)	603,709	May 10	846	187 / 188	83	781
Schwedtmann, Ferdinand, St. Louis, Mo. Dynamo or motor	604,795	May 31	2276	656	83	1242
Schwey, Edward H., Shoals, Ind. Sack-holder	605,661	June 14	1144	206	83	1590
Schwing, George, Newark, N. J. Lift for sashes, transoms, or skylights						
Scofield, Richard J., Manchester, England. Appliance for indicating position of punctures in pneumatic tires	601,907	Apr. 5	549	113	83	104
Scott, Charles F., assignor to Westinghouse Electric and Manufacturing Company, Pittsburg, Pa. Means for compensating for temperature-resistance changes	606,083	June 21	1844	425	83	1738
Scott, Charles F., and B. G. Lamme, assignors to Westinghouse Electric and Manufacturing Company, Pittsburg, Pa. System of electrical distribution	606,589	June 28	2886	668	83	1961
Scott, Charles L., McIntire, Iowa. Tank-valve	602,595	Apr. 19	1614	309	83	336
Scott, James, Pittsburg, Pa. Means for protecting furnace-walls	601,759	Apr. 5	264	52	83	51
Scott, John W., Albionville, Queensland. Curing hides or skins for transport	602,476	Apr. 19	1536	.....	83	329
Scott, Robert W. (See Williams and Swinglehurst, assignors.)						
Scott, Robert W., Philadelphia, assignor of one-half to L. N. D. Williams, Ashbourne, Pa. Yarn-changing device for rib-knitting machines	604,640	May 24	2600	594	83	1170
Scovill Manufacturing Company. (See Goss, Edward O., assignor.)						
Scovill Manufacturing Company. (See Lines, John, assignor.)						
Scoville, Charles S., *et al.* (See Newell, John G., assignor.)	603,744	May 10	903	201	83	792
Scoville, Elijah U., Manlius, N. Y. Faucet						
Scribner, Elmer C., administrator. (See Scribner, John M.)	606,947	June 28	2367	523 / 524	83	1639
Scribner, John M., deceased, Balsover, Canada; E. C. Scribner, administrator. Invalid-bed	602,777	Apr. 19	2047	463	83	418
Scrogge, Joseph W., Rogers, Ark. Pessary	603,141	June 7	196	34 / 35 / 36 / 37 / 38 / 39	83	1377
Scudder, Wilbur S., Brooklyn, N. Y., assignor to Monoline Composing Company, Washington, D. C. Monoline composing-machine	605,690	June 14	1490	334	83	1642
Scuri, Allessandro G. B., Gravedona, Italy. Distance-measuring instrument	605,518	June 14	836	195	83	1584
Seaman, Benjamin S., Canton, Ohio. Bicycle-seat clamp	606,998	June 28	2534	587	83	1890
Seaman, Benjamin S., Canton, Ohio. Bicycle-saddle	604,488	May 24	2327	528	83	1119
Seaman, William O., Springfield, Mass. Step-ladder						
Seaquest, Alfred L. (See Seaquest, Charles L. and A. L.)	606,091	June 21	1957	450	83	1760
Seaquest, Charles L. and A. L., Portland, Oreg. Mud-guard for bicycles						
Search, Casper F., Oak Park, Ill., assignor to Search Manufacturing Company, Sheboygan Falls, Wis. Feed-cutter	604,127	May 17	1651	371	83	970
Search Manufacturing Company. (See Search, Casper F., assignor.)						
Sears, Lee A., Nevada, Mo., and F. Rice, Kansas City, Kans. Smoke-consuming furnace	602,962	Apr. 26	2286	544	83	498
Seaver, Fred, assignor to F. B. Fargo & Company, Lake Mills, Wis. Steam-motor	603,660	May 10	765	170	83	765
Seaver, John W. (See Babcock, Wellman, and Seaver.)	602,918	Apr. 26	2304	525	83	492
Sebastian, Charles, assignor to A. S. Mann, St. Louis, Mo. Pocket-register	605,655	June 14	1098	258	83	1585
Sebastian, John, and B. B. Anderson, Chicago, Ill. Railway-ticket	603,474	May 3	417	98	83	660
Sebold, John G., New York, N. Y. Ironing-table	602,477	Apr. 19	1537	349	83	322
Secor, John A., Brooklyn, N. Y. Explosive-engine	603,346	May 3	178	41	83	695
Sedgwick, Harry A., Athol, Mass. Ball-cock						
Sedlacek, Julius, Nuremberg, Germany. Condensing-water and air cooling apparatus for refrigerating-machines	601,716	Apr. 5	188	35, 36	83	36
Sedlacek, Julius, Nuremberg, Germany. Refrigerating-machine	603,199	Apr. 12	1067	234	83	215
Sedlacek, Julius, Nuremberg, Germany. Cooling and sealing	604,162	May 17	1714	386	83	968
Sedlacek, Julius, Nuremberg, Germany. Gas-compressor	606,430	June 28	2611	608	83	1907
Seeger, William M., Louisville, Ky. Rubber-dam holder	604,800	May 31	2082	696	83	1272
Seekel, Theodore C., Bay City, Mich. Machine for sawing barrel-hoops	605,349	June 7	565	135	83	1460
Seeley, William W., Brooklyn, N. Y. Gas-burner	603,661	May 10	767	170	83	766
Segnitz, Herman. (See Fisher, Charles, assignor.)						
Segschneider, Gustav, Yonkers, N. Y. Machine for curling hat-brims	602,946	Apr. 12	1140	250	83	220
Seibert, Elisabet, Chicago, Ill. Vaginal syringe	605,669	June 14	1146	206	83	1591
Seifert, Bruno R., assignor to Chemische Fabrik von Heyden, Gesellschaft mit Beschränkter Haftung, Radebeul, Germany. Making orthosulfamin-benzoic-acid alkyl esters	604,508	May 24	2364	.....	83	1125
Seifert, Bruno R., assignor to Chemische Fabrik von Heyden, Gesellschaft mit Beschränkter Haftung, Radebeul, Germany. Oxyphenyl-guanidin and making same	605,977	June 21	1734	.....	83	1719
Seifert, John W., Dallas, Tex. Cotton elevator, cleaner, and feeder	604,496	May 24	2213	495	83	1100
Seiler, Paul. (See Williams and Seiler.)	605,519	June 14	837	195	83	1584
Selby, Wallace J., Burr Oak, Mich. Stove or furnace	605,751	June 14	1232	289 / 290	83	1611
Selden, Arthur R., assignor to F. S. Macomber, trustee, Rochester, N. Y. Starching-machine						
Seldner, Jonas J. (See Snyder and Seldner.)						
Selle, Gustav, Brandenburg, Germany. Photographic-plate holder for three-color processes	604,366	May 17	1914	498	83	1021
Selle, Gustav, Brandenburg, Germany. Photographs in natural colors	604,369	May 17	1914	.....	83	1021
Sellers, Coleman, Philadelphia, Pa., assignor, by mesne assignments, to Niagara Falls Power Company, Niagara Falls, N. Y. Thrust-bearing	602,589	Apr. 19	1730	391 / 392	83	355
Sellers, Morris, Chicago, Ill. Base-plate for railway-rail joints	605,520	June 14	839	195	83	1584
Sellman, William, Dorking, England. Preparing liquid food	605,190	June 7	296	.....	83	1906
Selvidge, Charles W., Mexia, Tex. Machine for stretching wire or other purposes	606,092	June 21	1959	460	83	1760
Selvidge, Charles W., assignor of one-half to J. B. Parnell, Mexia, Tex. Ant-trap	602,410	Apr. 12	1418	330	83	395
Seltzer, Lewis B. (See Carroll, Fenton, Kline, and Seltzer.)	606,098	June 21	1960	451	83	1760
Semke, William, Harrison, Kans. Boiler-flue cleaner						
Seneca Glass Company. (See Stenger, August, assignor.)						
Senior, George. (See Dundas and Senior.)						
Sergeant, Henry C., Westfield, N. J., assignor to Ingersoll-Sergeant Drill Company, New York, N. Y. Compressor for air, &c	602,877	Apr 26	2295	504	83	466

Serrell, Harold. (See Keaubert and Serrell.)						
Sessions, Henry H., Chicago, Ill., assignor to Standard Coupler Company, of New Jersey. Buffer equipment for railway-cars	605,581	June 14	840	196	83	1584
Sessions, Henry H., Chicago, Ill., assignor to Standard Coupler Company, of New Jersey. Center-bearing for railway-cars	605,582	June 14	843	197	83	1585
Sewall, Charles H., Chicago, Ill. Underground conduit for electric conductors	603,745	May 10	904	201	83	792
Seward, Oliver G., Minneapolis, Minn. Acetylene-gas lamp	603,746	May 10	906	201	83	793
Seward, Oliver G., Minneapolis, Minn. Acetylene-gas generator	603,747	May 10	909	201 / 202	83	793
Sewell, William H., Coleraine, Ireland, assignor of one-half to J. Aiken, Cowdenbeath, Scotland. Pneumatic tire	603,710	May 10	847	188	83	781
Seyffarth, Gustav, Philadelphia, Pa. Lubricator	603,997	May 10	1205	310 / 311	83	992
Seymour, Charles, assignor to Defiance Machine Works, Defiance, Ohio. Bending-machine	603,995	May 10	1243	293	83	857
Shaaber, Jacob, *et al.* (See Leightham, Joseph, assignor.)	604,270	May 17	1915	486	83	1088
Shaffer, Homer J., Scott, Ind. Device for cutting iron						
Shaft, Grant D., St. Paul, and H. Hays; said Shaft assignor and said Hays assignor of one-fourth to C. G. Hawley and P. B. Crane, Minneapolis, Minn. Fare register and recorder	603,861	May 10	1122	255	83	896
Shallenberger, Mary W., executrix. (See Shallenberger, Oliver B.)						
Shallenberger, Oliver B., deceased, Rochester, Pa.; M. W. Shallenberger, executrix. Shunt for electric circuits	606,171	June 21	2100	488	83	1786
Shanahan, Stephen, Charleston, W. Va. Brace-holder	603,267	Apr. 12	1344	300	83	272
Shann, Montague H. C. and R. E. C., Shoreham, England. Bending apparatus for shipframes	603,306	June 28	2271	548 / 549	83	1660
Shann, Richard E. C. (See Shann, Montague H. C. and R. E. C.)	601,760	Apr. 5	265	53	83	51
Sharp, Charles S., assignor to D. M. Osborne & Company, Auburn, N. Y. Corn-harvester.	601,761	Apr. 5	269	53, 54	83	51
Sharp, Charles S., assignor to D. M. Osborne & Company, Auburn, N. Y. Corn-harvester.						
Sharp, Charles S., Auburn, assignor, by mesne assignments, to National Harrow Company, Utica, N. Y. Spring-tooth harrow	604,271	May 17	1916	490	83	1092
Sharp, Joseph W., Jr., and J. W. Grantland, assignors to Haines, Jones & Cadbery, Philadelphia, Pa. Water-closet	605,583	June 14	1404	322	83	1636
Sharp, Thomas B., and F. Billing, Birmingham, England. Machine for manufacturing metal tubes	603,576	Apr. 26	2227	504	83	468
Sharpe, Joseph K., Jr., assignor to Indiana Manufacturing Company, Indianapolis, Ind. Fan for pneumatic straw-stackers	605,985	June 21	1698	374	83	1709
Sharretts, David E., assignor of one-half to C. E. Kloeber, Jr., Washington, D. C. Focusing attachment for cameras	606,204	June 28	2534	567 / 568	83	1890
Shaw, A. E. (See Robilia, John, assignor.)	604,796	May 31	2279	658	83	1243
Shaw, Charles J., Owosso, assignor to W. H. Shaw, Duffield, Mich. Standard	605,580	May 3	606	135	83	719
Shaw, Edgar, Swampscott, Mass. Dish-cleaner	606,805	June 28	2536	588	83	1891
Shaw, Elver H., assignor of one-half to W. A. Fraser, Sedalia, Mo. Combination-tool	606,800	June 28	2260	609	83	1961
Shaw, John H., assignor to Sargent & Company, New Haven, Conn. Knob attachment.						
Shaw, W. H. (See Shaw, Charles J., assignor.)						
Shaw, Walter, trustee. (See Chase, Frank, assignor.)						
Shay, Benjamin F. (See Shay, William H., assignor.)	604,846	May 31	2258	677	83	1257
Shay, William H., Newburg, assignor of one-half to B. F. Shay, Poughkeepsie, N. Y. Valve	603,588	May 10	1077	241	83	885
Shea, Patrick, Boston, Mass. Block or smoothing plane						
Sheehy, James J., *et al.* (See Lynch and Hough, assignors.)						
Shehan, William E. (See Hill and Shehan.)						
Shelbley, Jacob E., Harrisburg, Pa., assignor, by mesne assignments, to National Harrow Company, of New Jersey. Spring-tooth harrow	604,272	May 17	1918	490	83	1092
Shelby Steel Tube Company. (See Charnock, John A., assignor.)						
Shelby Steel Tube Company. (See Stiefel, Ralph C., assignor.)	604,847	May 31	2259	677 / 678 / 679	83	1258
Sheldon, Edward P., Brooklyn, assignor to R. Hoe, T. H. Mead, and C. W. Carpenter, New York, N. Y. Folding and cutting mechanism						
Shelly, Thomas E. (See McDonough and Shelly.)						
Shelton, Edward. (See Granger, Horace D., assignor.)						
Shepard, Harvey G., assignor to H. G. Shepard & Sons, New Haven, Conn. Handle-bar for cycles	605,758	June 14	1357	320	83	1612
Shepard, Mary M., Darlington, S. C. Bathing-suit	601,781	Apr. 5	308	61	83	59
Shepard & Sons, H. G. (See Shepard, Harvey G., assignor.)						
Shepard, W. H., *et al.* (See Cockburn, George G., assignor.)	605,978	June 21	1737	399	83	1730
Shepherd, George B., Grayson, Ky. Carpet or rug fastener						
Sheppard, John M., *et al.* (See Guerrant, George M., assignor.)	602,479	Apr. 19	1530	350	83	322
Sheppard, Joseph W., assignor to Mississippi Glass Company, St. Louis, Mo. Washboard	602,478	Apr. 19	1536	349	83	322
Sheppard, John W., Charlton, Iowa. Doubletree	605,234	June 7	398	76	83	1413
Shepperd, John W. (See Shann, Montague H. C. and R. E. C.)	606,366	June 28	2537	588	83	1891
Sherk, Truman C. O., Buffalo, N. Y. Smoke-bell	605,019	May 31	2245	746	83	1313
Sherrer, Philip, Cleveland, Ohio. Cask-pitching apparatus	606,207	June 28	2275	549	83	1861
Sherry, John W., Crompton, assignor to Crompton Company, Providence, R. I. Loom.						
Sherwood, William E., Oneida, N. Y. Antirattling thill-coupling	605,101	June 7	220	57	83	1396
Sherwood, William E., and Howard Iron Company. (See Gallagher, Thomas M., assignor.)	604,497	May 24	2215	496	83	1100
Shickle, Harrison & Howard Iron Company. Puzzle						
Shields, Edgar A., New York, N. Y. Apparatus for manufacturing gas						
Shields, Henry C., Troy, N. Y. Apparatus for manufacturing gas	604,498	May 24	2218	496	83	1100
Shields, William E., assignor to W. T. Barker and L. W. Feighner, Nashville, Mich. Clothes-drier	602,776	Apr. 19	2048	462	83	419
Shimer, Samuel J., Milton, Pa. Gage for cutter-knives	605,976	May 10	1216	308	83	879
Shimer, Samuel J., Milton, Pa. Cutter-head	604,797	May 31	2260	658 / 659	83	1243
Shires, Michael, Spring Mills, and J. Q. A. Kennedy, assignors to Johnstown Fire Escape Company, Limited, Johnstown, Pa. Machine for making fire-escape ladders

Staples, John A., and C. Bush, assignors to C. H. Hanford, Newburg, N. Y. Nail-machine	602,084	Apr. 5	738	168	88	142
Stark, William F., New York, N. Y., assignor to Standard Pump and Filter Company, of New Jersey. Hydraulic air-compressor	602,947	Apr. 12	1143	251	88	320
Starks, Nils O., assignor to Fuller & Johnson Manufacturing Company, Madison, Wis. Cultivator	602,779	Apr. 19	2049	464	88	419
Starks, Nils O., assignor to Fuller & Johnson Manufacturing Company, Madison, Wis. Cultivator	604,130	May 17	1660	{372 373	{88	973

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Starr, Charles E., Jr., assignor to W. E. Harrington, Camden, N. J. Sign	608,092	Apr. 26	2606	592	88	539
Starr, Emory E., Bowling Green, Ohio. Furnace	608,372	Apr. 12	1350	{301 302	{88	272
Starr, Fred. (See Entwistle, Starr, Talley, and Lorance.)						
Starrett, Laroy S., Athol, Mass. Speed-indicator	601,800	Apr. 5	335	66	88	63
Staten Island Construction Company. (See Kühne, Paul, assignor.)						
Staub, Henry, and C. Duerst, Allegheny, assignors, by mesne assignments, to T. McKenna, Pittsburg, Pa. Bottle-filling apparatus. (Reissue)	11,667	May 31	3334	706	88	1330
Stauber, Emanuel, Berlin, Germany. Drying apparatus	605,097	June 21	1967	432	88	1702
Staudenmayer, John G., Allegheny, Pa. Milk-can lock	608,480	May 3	450	102	88	699
Stauffer, John H., Gap, Pa. Wire-picket-twisting device	605,980	June 21	1630	376	88	1702
Staven, Joseph A. (See Parbel and Staven.)						
Staver Carriage Company. (See Cloyes, James H., assignor.)						
Stearns, Albert, Trenton, Mich. Machine for filling, weighing, and assorting packages	608,413	May 3	292	65, 66	88	656
Stearns & Co., E. C. (See Case, Frank B., assignor.)						
Stebbins, Arthur D., *et al.* (See Le Baillister, David N., assignor.)						
Stebbins, William F., Springfield, Mass. Pneumatic cushion for billiard or pool tables	608,490	May 3	460	109	88	699
Stech, John, Butte, Mont. Shoe-fastener	602,147	Apr. 12	972	212	88	195
Steedman, George F., St. Louis, Mo. Shingle-sawing machine	608,998	May 10	1246	{283 284	{88	858
Steegmüller, Richard, New York, N. Y. Horn extension for can-body-forming machines	602,647	Apr. 19	1827	{416 417	{88	575
Steel, John W., *et al.* (See Boykin, Christopher C., assignor.)						
Steele, John R., assignor of one-fourth to M. Smith, Sandy Valley, Pa. Skate	608,435	May 3	333	74	88	663
Steen, Anker B., Buxton, N. D. Permutation-padlock	601,801	Apr. 5	336	66	88	63
Steenken, Carl, Dinglingen, Germany. Stirrup	604,801	May 31	2997	660	88	1244
Stefany, Felix, New York, N. Y. Hat-pin	601,989	Apr. 5	609	149	88	132
Stehle, Don, *et al.* (See Wurthner, Jacob, assignor.)						
Steiger, Eugen, assignor to C. A. Meyer & Cie, Zurich, Switzerland. Machine for multiplying copies of manuscript	604,849	May 31	2964	{679 680	{88	1256
Stein, Friedrich W. V. (See Reichel and Stein.)						
Steinacker, Frank W., and E. F. Cowley, Cleveland, Ohio. Electric-arc lamp	604,219	May 17	1819	{408 409	{88	1008
Steinbach, Reinhold, assignor to Fried. Krupp Grusonwerk, Magdeburg-Buckau, Germany. Ball-mill	603,977	May 10	1317	302	88	872
Steiner, Arnold, assignor to Chemische Fabrik, vormals Sandoz, Basle, Switzerland. Triphenylmethane-blue dye	608,016	Apr. 26	2471	------	88	514
Steinke, Georg, and F. Schmidt, assignors to Farbwerke, vormals Meister, Lucius & Brüning, Höchst-on-the-Main, Germany. Black diamo wool-dye	608,008	Apr. 26	2609	------	88	539
Steinmann, Louis E. (See Richards, Joseph B., assignor.)						
Steinmetz, Charles P., Schenectady, N. Y., assignor to General Electric Company, of New York. Alternating-current induction-motor	602,930	Apr. 26	2307	526	88	492
Steinmetz, Charles P., Schenectady, N. Y., assignor to General Electric Company, of New York. Alternating-current induction-motor	602,921	Apr. 26	2211	526	88	488
Steinmetz, Charles P., Schenectady, N. Y., assignor to General Electric Company, of New York. System of electrical distribution	605,585	June 14	847	198	88	1536
Steinmetz, Charles P., Schenectady, N. Y., assignor to General Electric Company, of New York. System of electrical distribution	605,520	June 14	848	{198 199	{88	1536
Steinmetz, Charles P., Schenectady, N. Y., assignor to General Electric Company, of New York. System of electrical distribution	608,835	May 10	1082	241	88	886
Stendahl, Anders, Ala, Sweden. Lift for piling lumber	606,593	June 28	2893	670	88	1962
Stender, Herman, Prospect Park, assignor of one-half to H. P. Ware, San Gabriel, Cal. Photographic copying-camera	606,594	June 28	2895	670	88	1962
Stender, Herman, Prospect Park, assignor of one-half to H. P. Ware, San Gabriel, Cal. Photographic copying-camera	601,685	Apr. 5	112	22	88	24
Stenger, August, assignor to Seneca Glass Company, Morgantown, W. Va. Machine for cutting and smoothing tumblers	602,526	Apr. 19	1615	------	88	337
Stephens, Albert G., assignor of one-half to W. Whelan, Colorado Springs, Colo. Composition for extracting gold from refractory ores	605,760	June 14	1270	{203 204	{88	1615
Stephens, Alejandro, Guadalajara, Mexico. Rotary engine	606,595	June 28	2893	------	88	1963
Stephens, John, Muncie, Ind. Making planished sheet-iron	608,158	Apr. 26	2715	617	88	561
Stephens, Robert, *et al.* (See Smith, William, assignor.)						
Stephenson, Clement L., assignor to H. C. Stephenson, New York, N. Y. Waist-belt attachment	601,910	Apr. 5	556	------	88	106
Stephenson, Helen C. (See Stephenson, Clement L., assignor.)						
Stephenson, Taylor, Manning, Iowa. Paint	603,823	May 10	1048	{233 234	{88	881
Stephenson, William, Morris, Canada. Traction-engine	608,862	May 10	1134	255	88	897
Stephenson, William, Morris, Canada. Seed-drill	608,863	May 10	1134	255	88	897
Stephenson, William, Morris, Canada. Seed-drill-disk shoe	608,978	May 10	1319	302	88	873
Stephenson, William, Morris, Canada. Threshing-machine feeder	608,979	May 10	1321	302	88	873
Stephenson, William, Morris, Canada. Gang-plow	602,010	Apr. 5	744	160	88	141
Steppan, Josef, Pforzheim, Germany. Toy						
Stern, Herman. (See Dow and Stern.)						
Stern, Leopold H., and T. W. G. Cook, New York, N. Y.; said Cook assignor to said Stern. Machine for grinding and polishing diamonds	605,198	June 7	242	58	88	1397
Steven, Henri, San Sebastian, Spain. Engine	604,643	May 24	2605	595	88	1171
Stevens, Charles D., New York, N. Y. Wheel	601,802	Apr. 5	338	68	88	68
Stevens, John H. (See Wood and Stevens.)						
Stevens, John H., Newark, N. J., assignor to Celluloid Company, New York, N. Y. Purifying nitrocellulose	605,931	June 21	1640	------	88	1702
Stevens, Lee. (See Laidlaw, George B., assignor.)						
Stevens, Lewis W., Los Angeles, Cal. Surf-boat	608,211	Apr. 26	2795	{638 639	{88	576
Stevens, John T., Manning, Wis. Coat-support	606,477	June 28	2662	618	88	1921
Stevens, John W., St. Paul, Minn. Seal-lock	604,433	May 24	2295	498	88	1101
Stevens, Samuel M., Manchester, N. H. Fire-extinguisher	605,982	June 21	1649	377	88	1702
Stevens, Seriah, Boston, Mass. Surgical lounge	601,702	Apr. 5	272	53	88	52
Stevens, Sylvester G., Lincoln, N. Y. Revolving gate	608,212	Apr. 26	2707	639	88	576
Stevenson, Elbert B., Philipsburg, Canada. Clothes-tongs	608,484	Apr. 19	1547	351	88	324
Stevenson, George W., assignor of one-half to T. Leas, Cramer's Hill, N. J. Presser-foot for sewing-machines	601,861	Apr. 5	472	95	88	86
Stevenson, James A., New Castle, Pa. Water-heater	604,131	May 17	1661	373	88	979
Stevenson, William M., and W. K. Bailey, Honey Grove, Tex. Water-tank	602,373	Apr. 12	1352	302	88	273
Steward, Clarence S., Chattanooga, Tenn. Gas-burner	608,618	May 3	686	153	88	734
Steward, George R., assignor of two-thirds to E. E. Glaskin, London, and J. Cash, Coventry, England. Furnace-door	604,093	May 17	1598	358	88	959

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Steward, John F. (See Ellis and Steward.)						
Stewart, Alexander T., Ream's Station, Va. Seed-planter	603,213	Apr. 26	2798	639	88	576
Stewart, David S., assignor of one-half to G. W. Jones Lumber Company, Clintonville, Wis. Sawing-machine	606,035	June 21	1848	426	88	1736
Stewart, F. W. (See Van Schoick, George R., assignor.)						
Stewart Hartshorn Company. (See Hartshorn, Edmund F., assignor.)						
Stewart, John J., *et al.* (See Cline, William, assignor.)	604,869	May 31	2005	660	88	1907
Stewart, John K., Chicago, Ill. Mechanism for operating animal-shears, &c.	604,802	May 31	2998	660	88	1944
Stewart, Rolla, and W. R. Winchel, Wolcott, N. Y. Hoisting device	601,739	Apr. 5	227	45	88	44
Stewart, Scott, and J. F. Swisher, Rivesville, W. Va. Grain measurer and register	605,761	June 14	1273	294	88	1615
Stewart, Theodore L., Brooklyn, N. Y., assignor, by mesne assignments, to Venetian Iron Company, of New Jersey. Tool for cutting and binding metallic strips	603,989	May 10	1249	284	88	859
Stickel, Jacob, Williamsport, Pa. Floating power-house						
Stickney, Benjamin W. (See Ring and Stickney.)	605,702	June 14	1275	295	88	1616
Stickney, Natt, Bradford Mass. Dumping-scow	606,096	June 21	1966	452	88	1762
Stiefel, Adolph, Hammelburg, Germany. Bouquet-holder						
Stiefel, Moses. (See Mandl, Alexander, assignor.)						
Stiefel, Ralph C., Ellwood City, assignor to Shelby Steel Tube Company, Pittsburg, Pa. Mechanism for expanding or enlarging metallic tubes	605,087	May 31	2259	748 749	88	1816
Stieferman, Peter. (See Howe and Stieferman.)						
Stiles, Edward R., Decatur, Ill. Railway-rail tie	605,356	June 7	574	127	88	1402
Stiles & Fladd Press Company. (See Good, Robert J., assignor.)						
Stiles, Henry M., Newark, assignor of one-half to H. M. Barrett, Bloomfield, N. J. Sand-box for railway-cars	606,172	June 21	2102	483	88	1767
Stille, Friedrich, Lingerich, Germany. Grinding-mill	603,516	May 8	509	111	88	949
Stillwell, Charles J., Winfield, Kans. Box-fastener	604,923	May 31	3095	711	88	1284
Stillwell-Bierce & Smith-Vaile Company. (See Gleaser, Arthur, assignor.)						
Stillwell, Wallace A., and A. Barneck, Salina, Kans. Telephone signal system	604,484	May 24	2296	499 500	88	1108
Stimpson, Wallace I., Milford, assignor to Sawyer Spindle Company, Boston, Mass. Spindle and bearing	601,846	Apr. 5	444	90	88	88
Stimson, Charles W., New York, N. Y. Button	603,517	May 3	510	111	88	699
Stimson, Nathaniel A., Herkimer, N. Y. Printing and folding machine	606,397	June 28	2536	588 589	88	1801
Stirckler, Albert E., Northampton, England. Apparatus for driving tacks	606,596	June 28	2899	670 671	88	1968
Stirling, Edward M., Newark, N. J. Flushing-tank	604,178	May 17	1754	395	88	991
Stirling, Henry R., Barton, Ark. Mowing-machine	601,911	Apr. 5	357	114	88	106
Stivers, William D., Jersey City, N. J. Turret-joint for naval vessels	602,374	Apr. 12	1353	302	88	978
Stivers, William D., Jersey City, N. J. Turret for war vessels	604,435	May 24	2231	500 501	88	1102
Stockwell, Joseph S., *et al.* (See Kinney, Israel, assignor.)	604,946	May 31	3127	719	88	1391
Stoddard, Abbott L., Providence, R. I. Guide and guard for variety molding-machines	606,086	June 21	1949	436	88	1730
Stoecker, Louis, Jersey City, N. J. Pencil-sharpener	602,780	Apr. 19	2051	464	88	419
Stokes, Alfred W., London, assignor to R. A. Lister & Co., Limited, Dursley, England. Apparatus for determining fat in milk	605,146	June 7	165	41	88	1398
Stokes, Alfred W., London, assignor to R. A. Lister & Co., Limited, Dursley, England. Pipette	604,220	May 17	1857	415 416	88	1010
Stolz, Ferdinand C., New York, N. Y. Lantern for ovens	603,294	May 3	84	21	88	617
Stone, Columbus, Home, assignor of one-sixth to J. Armitage, Greenville, Tenn. Grain-scourer						
Stone & Co., J. (See Preston and Gill, assignors.)						
Stone, Irving. (See Gibbs and Stone.)						
Stone, Jane W. (See Kennedy, Frank M., assignor.)						
Stone, Joseph P., Schenectady, N. Y., and S. E. Doane, Marlborough, Mass., assignors to General Electric Company, of New York. Starting device	603,778	May 10	969	215	88	803
Stone, Walter S. (See Heelan, Lawrence W., assignor.)	603,901	Apr. 12	1070	235	88	216
Stone, William G., Charlotte, N. C. Churn	602,781	Apr. 19	2052	465 466	88	419
Stopher, Arthur J., assignor to Siemens Brothers & Company, Limited, London, England. Apparatus for controlling electric motors	603,797	May 10	1000	------	88	812
Storer, Thomas, Glasgow, Scotland. Extracting nickel from nickel ores						
Story, E. C., *et al.* (See Kellerman and Crane, assignors.)						
Stott, Jesse A. (See Todd and Stott.)	606,250	June 28	2275	526	88	1840
Stout, Samuel, Newcomb, Ill. Gate	604,275	May 17	1923	430	88	1094
Stover, Frank E., Luray, Va. Self-closing umbrella	606,099	June 21	1969	458 459	88	1762
Stover, Frank E., and F. G. Grove, Luray, Va. Folding umbrella	606,597	June 28	2908	671	88	1964
Stowe, George D., Whitewater, Wis. Self-feeder for threshing-machines	601,912	Apr. 5	558	115	88	100
Stowe, Lorenzo, Chattanooga, Tenn. Combined frame-brace and stake-socket						
Strain, Charley H. (See Rockey and Strain.)						
Strain, Edwin, Melrose, Mass., assignor of one-half to H. A. Blanchard, New York, N. Y. Split needle	603,822	May 10	1049	234	88	881
Strang, Joseph. (See Simpson, Walker, Strang, and Farnworth.)	603,712	May 10	850	189	88	762
Stransky, Anton, Gravesville, Wis. Swinging hammock-chair	605,586	June 14	903	223	88	1556
Strasburg, Charles A., Cridersville, Ohio. Mail-bag fastener

Strunz, Frederick B. and S. C., Pittsburg, Pa. Soap-crutching machine	604,671	May 24	2654	608	88	1181
Strunz, Stephen C. (See Strunz, Frederick B. and S. C.)						
Stubbers, Joseph, Covington, Ky. Apparatus for conveying air and vapor to burners	603,436	May 3	334	74	88	664
Stubblebine, William, Bethlehem, Pa. Furnace	606,600	June 28	2307	672 673	88	1964
Stubbs, William E., Chester, Pa. Mechanism for indicating travel of bicycles, &c	601,666	Apr. 5	113	22	88	24
Stuckey, Harriet T., Manville, S. C. Umbrella-holder	606,398	June 28	2545	590	88	1898
Stull, William B., Bayonne, N. J. Commutator-brush holder	604,220	May 17	1894	409	88	1004
Stumpf, John, Chicago, Ill. Cut-off mechanism for steam-engines	603,475	May 3	418	93	88	690
Sturcke, Herman E., Jamaica, assignor to Ætna Chemical Company, New York, N. Y. Preparing amorphous carbonate of lime from residues	603,225	Apr. 26	2823	645	88	581
Sturcke, Herman E., Jamaica, assignor to Ætna Chemical Company, New York, N. Y. Preparing amorphous carbonate of lime from residues	603,226	Apr. 26	2827	646	88	588
Sturgeon, John C., Erie, Pa. Mechanism for piercing metal ingots	601,783	Apr. 5	311	61, 62	88	50
Sturgeon, John C., Erie, Pa. Mechanism for rolling out hollow metal ingots into tubes	601,784	Apr. 5	313	62	88	50
Sturges, Hiram A. (See Wisner, William O., assignor.)						
Sturges, Joseph C., Aurora, Ill. Harrow	603,796	May 10	1001	224	88	813
Sturges, Lee, Chicago, Ill. Shuttle for looms	604,804	May 31	2890	661	88	1245
Sturgis, Samuel, West Manayunk, assignor to J. A. McCullough, Philadelphia, Pa. Dumping-wagon	604,644	May 24	2607	595 596	88	1172
Stutsman, Reuben O., Des Moines, Iowa. Apparatus for popping corn	605,617	June 14	1021	235	88	1567
Succie, Fred, Brewer, Me. Steam or hot-water heater	601,687	Apr. 5	117	23	88	25
Suck, Frederick A. (See White, Maurice W., assignor.)						
Suckert, Julius J., *et al.* (See Grimm, Maximilian, assignor.)						
Sulka, Frank J., Philadelphia, Pa. Roller-skate	604,179	May 17	1757	395	88	992
Sullivan, Daniel F. (See White and Sullivan.)						
Sullivan, Eugene J., River Forest, assignor to Brown Brothers Manufacturing Company, Chicago, Ill. Illuminating-lens for sidewalks	603,799	May 10	1002	224	88	812
Sullivan, Herbert W., London, England. Electrical measuring instrument	603,527	Apr. 19	1615	360	88	337
Sullivan, John J., Troy, N. Y. Punching-machine	603,664	May 10	771	171	88	766
Sullivan Machinery Company. (See Ball, Albert, assignor.)						
Sullivan, Mary. (See White and Sullivan, assignors.)						
Sullivan, Warren R. (See Perks, Archibald F., assignor.)						
Sulzman, Charles A., Waterford, assignor of one-half to J. Knickerbacker, Troy, N. Y. Fire-hydrant	603,295	May 3	86	22	88	618
Summers, Arthur L. (See Hussey and Summers.)						
Sundberg, William E., assignor to L. M. Patterson and C. J. Ekstedt, trustees, Worcester, Mass. Telephone-transmitter	605,832	June 14	1431	328	88	1644
Sundell, John, *et al.* (See Larson and Brannell, assignors.)						
Sunderland, Jesse W., assignor of one-half to A. J. McDuffee, Chicago, Ill. Gearing for velocipedes	605,938	June 21	1644	377	88	1708
Sundstrom, Herman T., Galveston, Tex. Machine for sealing newspapers	603,458	May 3	374	85 86 87	88	672
Sundt, August, assignor to Otis Brothers & Company, New York, N. Y. Control apparatus for elevators	603,665	May 10	772	171	88	767
Supiee, Henry H., assignor to C. E. Baird, Philadelphia, Pa. Apparatus for generating acetylene gas	606,087	June 21	1850	427	88	1739
Susemihl, Francis G., and A. Torrey, Detroit, Mich. Roller-bearing	605,147	June 7	165	41	88	1398
Sutcliffe, James A., Blackburn, assignor to himself, and G. Paley, Preston, England. Sheet-metal bobbin	602,168	Apr. 12	1087	227	88	209
Suter, Robert R., Media, Pa. Removable sprocket-rim	601,990	Apr. 5	700	149	88	139
Sutfin, Willis A., Marysville, Cal. Automatic hose-coupling	605,238	June 7	333	77	88	1414
Sutton, Benjamin F., Brooklyn, N. Y. Dress-shield	606,351	June 28	2276	536	88	1841
Sutton, George W., New Rochelle, assignor to Phœnix Interior Telephone Company, New York, N. Y. Combined annunciator and spring-jack	604,340	May 17	2056	460	88	1049
Sutton, John R. (See Vaughan, Charles W., assignor.) (Reissue.)	604,976	May 17	1985	430 431	88	1094
Sutton, William S., Belvidere, Ill. Rotary engine						
Suydam, John H., Sr., assignor of one-half to I. E. Brown, New Brunswick, N. J. Lath-carrying device for wall-paper or other machines	603,375	Apr. 12	1056	208	88	273
Swan, George E., Beaver Dam, Wis. Heel-spring for boots or shoes	604,805	May 31	2991	661	88	1245
Swan, Henry C., Oshkosh, Wis. Adjustable vehicle-iron	604,198	May 17	1786	408	88	997
Swan, Henry C., Oshkosh, Wis. Step-pad	605,357	June 7	576	127	88	1469
Swank, Charles H., Linville, Va. Tongue-support	603,367	May 3	243	55	88	647
Swartz, Harry E., Reading, Pa. Soap-press	604,436	May 24	2234	501	88	1108
Swartz, Robert E., assignor of one-half to H. E. W. Barnes, Creston, Iowa. Ball-and-socket clamp	605,527	June 14	850	199	88	1536
Swartz, Robert E., assignor of one-half to C. F. Skirvin, Creston, Iowa. Music-leaf turner	606,252	June 28	2277	526	88	1841
Sweeney, John, New York, N. Y. Horseshoe-pad	603,485	Apr. 19	1547	338	88	324
Sweeney, Peter, Toronto, Canada. Window-washer	603,414	May 3	207	66	88	637
Sweet, Benjamin W., Knoxville, Tenn. Gold-separating machine	602,113	Apr. 12	906	196 197	88	184
Sweet, Frederick D., Elyria, Ohio. Electric railway	604,911	May 31	3082	708	88	1289
Sweeting, James A., assignor of one-half to J. A. Cambridge, New York, N. Y. Combined knife and scoop	605,209	June 7	288	65	88	1408
Swelgard, Emanuel W., Chicago, Ill. Photographic-printing frame	603,713	May 10	851	189	88	762
Swelgard, Emanuel W., Chicago, Ill. Combination-tool for bicycles	605,453	June 7	741	169	88	1495
Swelgart, Webster W., York Road, Md. Nut-lock	606,253	June 28	2279	526	88	1842
Sweitzer, William H., Danville, Ill. Die-stock	603,980	May 10	1250	284	88	859
Swift, Frank E., Washington, Iowa. Furnace	606,254	June 28	2281	527	88	1842
Swift, George W., Jr., Bordentown, N. J. Printing-machine	602,377	Apr. 19	1102	252 253	88	940
Swift, Orrin W., New Haven, Conn. Apparatus for cooling and purifying liquids	605,685	June 14	1151	267	88	1598
Swihart, John H., assignor to National Computing Scale Company, Cleveland, Ohio. Scale	603,415	May 3	298	67	88	637
Swinglehurst, Harry, Jr. (See Williams and Swinglehurst.)	606,668	Apr. 19	1876	426	88	365
Swink, Charlie E., Chicago, Ill. Medicine-carton						
Swisher, John F. (See Stewart and Swisher.)						
Sydenham, Arthur. (See Sydenham, Watkinson, and Sydenham.)

Thompson, Robert R., Bloomington, Ill. Box-lounge	608,487	Apr. 19	1549	352 353	83	394
Thompson & Son, Henry G. (See Luke, Charles, assignor.)						
Thompson & Son, Henry G. (See Mower, Samuel E., assignor.)						
Thompson, Walter M., and C. Nuhring, Cincinnati, Ohio. Apparatus for extinguishing fire and distributing disinfectants	604,439	May 24	2237	502	83	1103
Thompson, William H. and R., London, England. Lubricator	604,132	May 17	1662	373 374	83	972
Thompson, William P. (See Van Gelder, Pieter, assignor.)						
Thomson, Bessie W. (See Weston, Henry B., assignor.)						
Thomson, David D. (See Davis, Granville, assignor.)						
Thomson, David D. (See Davis, Granville and J. M., assignors.)						
Thomson, Elihu, Swampscott, Mass., assignor to General Electric Company, of New York. Electric-arc lamp	602,922	Apr. 26	2313	527	83	284
Thomson, Elihu, Lynn, Mass., assignor to Thomson-Houston Electric Company, of Connecticut. Distribution of electric currents	602,963	Apr. 26	2387	544	83	498
Thomson-Houston Electric Company. (See Thomson, Elihu, assignor.)						
Thomson, John, Brooklyn, N. Y., assignor to Neptune Meter Company, Jersey City, N. J. Mechanism for controlling actions of oscillating disks	602,376	Apr. 12	1358	304	83	274
Thomson, John, Brooklyn, N. Y., assignor to Neptune Meter Company, Newark, N. J. Apparatus for preventing damage to water-meters	602,377	Apr. 12	1360	304	83	274
Thomson, John, Brooklyn, N. Y., assignor to Neptune Meter Company, Jersey City, N. J. Water-meter	602,378	Apr. 12	1361	304	83	274
Thomson, Thomas, Scranton, Pa. Smoke-generator	606,315	June 28	2386	553	83	1863
Thorn, Frederick S., and C. Hoddle, London, England. Apparatus for generating acetylene gas	604,199	May 17	1787	403	83	906
Thorn, Henry A. A., London, England. Single-trigger mechanism for guns	602,610	Apr. 19	1756	401	83	903
Thorn, John W. Mechanicsburg, Va. Safety-stirrup	606,366	June 28	2487	578	83	1982
Thorn, Thomas F. (See Dennis and Thorn.)						
Thornburgh Coupler Attachments Company. (See Thornburgh, William, assignor.)						
Thornburgh, William, Shelby, Ohio, assignor to Thornburgh Coupler Attachments Company, Limited, Detroit, Mich. Coupling attachment for railway-cars	606,102	June 21	1974	453 454	83	1763
Thornburgh, William, Shelby, Ohio, assignor to Thornburgh Coupler Attachments Company, Limited, Detroit, Mich. Spring-protecting device for railway coupling attachments	606,316	June 28	2266	553	83	1864
Thorne, Levi E., New York, N. Y. Sound-locating instrument	605,081	May 31	2269	751	83	1318
Thorne, Richard H., El Paso, Tex. Burial apparatus	605,360	June 7	586	130 131	83	1463
Thornton, William A. (See Scarth and Thornton.)						
Thornycroft, John I., London, England. Steam-generator	608,800	May 10	1004	234 235	83	812
Thrall, George. (See Taylor, Harrison H., assignor.)						
Thum, Hugo, Grand Rapids, Mich. Sticky fly-paper	608,961	May 10	1324	303 304	83	874
Thunderbolt, Edward, Carlton, Victoria. Clutch-gear	602,568	Apr. 19	1685	388	83	349
Thurber, Charles H. (See Harrison and Thurber.)						
Thurmond, John R., Denver, Colo. Nut-lock	601,915	Apr. 5	362	116	83	107
Thurner, Michael. (See Weber and Thurner.)						
Tibbetts, Urville D., *et al.* (See Hitchcock, Charles F., assignor.)						
Tice, Levi. (See Tice, Wilson M. and L.)						
Tice, Wilson M. and L., Bethlehem, Pa. Filter for rainwater	602,498	Apr. 19	1550	353	83	395
Tigges, Hermann. (See Jacobson and Tigges.)						
Tilden, James A., Hyde Park, assignor to Hersey Manufacturing Company, Boston, Mass. Pneumatic malting-drum	602,528	Apr. 19	1619	370	83	337
Tilley, John B. (See Tilley, Joseph B., J. B., and L. F.)	601,764	Apr. 5	375	54	83	53
Tilley, Joseph B., J. B., and L. F., Keighley, Kans. Kafir-corn header	605,985	June 21	1647	378	83	1708
Tilley, Licaneory F. (See Tilley, Joseph B., J. B., and L. F.)	602,501	Apr. 19	1723	392	83	356
Tillman, William M., Salt Lake City, Utah. Blowpipe	606,635	June 28	2968	689	83	1976
Timberlake, Orville A., Norwood, Ohio. Vehicle-spring	606,636	June 28	2970	690	83	1976
Timken, Henry, and R. Heinzelman, assignors of one-half to W. R. and H. H. Timken, St. Louis, Mo. Roller-bearing for vehicles	606,608	June 28	2914	674 675	83	1905
Timken, Henry, and R. Heinzelman, assignors of one-half to W. R. and H. H. Timken, St. Louis, Mo. Roller-bearing	604,947	May 31	2128	719	83	1291
Timken, Henry H., *et al.* (See Timken and Heinzelman, assignors.)	604,552	May 24	2453	557 558	83	1141
Timken, William R., *et al.* (See Timken and Heinzelman, assignors.)						
Timms, James, assignor to Buckeye Malleable Iron and Coupler Company, Columbus, Ohio. Car-coupling						
Timpe, Adolf. (See Deacon and Timpe.)						
Tinkham, Francis M., Springfield, Mass. Bedstead						
Tinkham, Howard A., Norton, assignor to White Warner Company, Taunton, Mass. Hot-air furnace						
Tirrell, Jacob P. (See Kendall and Tirrell.)						
Titus, Ivor R., and J. W. Ensign, assignors to Ensign Manufacturing Company, Huntington, W. Va. Self-oiling wheel	602,379	Apr. 12	1362	305	83	274
Titus, John F., Boone county, Ind. Nut-lock	603,670	May 10	787	173	83	770
Titus, Silas W., Brooklyn, assignor to Pneumatic Engineering Company, New York, N. Y. Tube-well	602,547	Apr. 19	1652	376	83	343
Titus, Silas W., New York, N. Y., assignor to Pneumatic Engineering Company, of West Virginia. Apparatus for using compressed air to elevate water. (Reissue)	11,675	June 28	2978	691	83	1976
Tobey, Fred W., Grand Rapids, Mich. Lock	604,673	May 24	2656	609	83	1188
Todd, Albert M. (See Abbey, Orra E., assignor.)						
Todd, Albert V., Oelwein, Iowa. Burglar-alarm	605,589	June 14	905	224	83	1558
Todd, Alfred M., Bordeaux, France. Toy	604,180	May 17	1757	396	83	962
Todd, Richard, Heaton Chapel, and J. A. Stott, Manchester, England. Apparatus for spinning textile fibers	608,068	Apr. 26	2558	581	83	530

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Todd, S. E., Jr. (See Hoard, Milo C., assignor.)						
Toepfer, Antoinette, administratrix. (See Toepfer, William G.)						
Toepfer, William G., deceased, (A. Toepfer, administratrix,) assignor to himself and E. M. Sanger, New York, N. Y. Bicycle-bell	605,926 604,377	June 21 May 17	1648 1927	376 431	83 83	1704 1084
Tofft, Peter A., New York, N. Y. Knockdown house						
Toland, Charles M., Wilmington, Del. Support-bracket for lamps, gas-burners, or the like	604,133	May 17	1666	374	83	973
Toledo Glass Company. (See Owens, Michael J., assignor.) (Reissue.)						
Tombs, Charles C., assignor to T. J. Fearl and R. Ferguson, Johnstown, Pa. Folding chair	606,108	June 21	1976	454	83	1764
Tomlins, Herbert, assignor to Electric Fog-Signal Syndicate, Limited, London, England. Fog signaling apparatus for railways	605,361	June 7	502	131 132	83	1464
Tomlinson, Elizabeth, *et al.* (See Tomlinson, James, assignor.)						
Tomlinson, James, assignor to E. Tomlinson and W. C. Duffus, Detroit, Mich. Storing-package for liquids	603,240	Apr. 26	2852	650	83	586
Tonge, James. (See Gass and Tonge.)	603,296	May 3	87	.....	83	618
Tooker, George W., New York, N. Y. Gilding china, earthenware, or porcelain articles.						
Toone, Benjamin, *et al.* (See Adcock, Arthur, assignor.)	605,657	June 14	1108	254	83	1582
Toquet, Benjamin H., Westport, Conn. Pencil	603,604	June 28	2915	675	83	1966
Torea, Jacob, Grand Rapids, Mich. Bicycle-tire	601,820	Apr. 5	374	79	83	70
Torkelson, Reinhard T., Worcester, Mass. Breech-loading firearm						
Torrey, Augustus. (See Susemihl and Torrey.)						
Totten, George. (See Haywood and Totten.)						
Toward, Charles P., Worcester, Mass., assignor of one-half to E. D. Merrill and F. D. Folsom. Combination cutter, connector, and pliers	603,349	May 3	183	42	83	637
Tower, Clinton A., assignor to National Malleable Castings Company, Cleveland, Ohio. Car-coupling	601,847	Apr. 5	445	90	83	83
Tower, Wallace G., *et al.* (See Young, Harland H., assignor.)						
Towers, Edmund, Yonkers, assignor of three-fourths to J. Gibney and J. C. S. Wellis, Sing Sing, N. Y. Bottle	603,350	May 3	184	42	83	637
Towles, Henry O. (See Walquist, Nelson, and Gronquist, assignors.)						
Towne, Nathan P., Philadelphia, Pa. Gun-turret	606,038	June 21	1858	427 428	83	1739
Towne, Nathan P., Philadelphia, Pa. Turret-driving mechanism	606,039	June 21	1856	428	83	1739
Townsend, Elvin E., Capitola, Cal. Seat trip mechanism for flushing-tanks of water-closets	605,150	June 7	170	42	83	1383
Townsend, Emory L. (See Davis and Townsend.)						
Tracy, John D., and J. F. Platt, deceased, Sterling, Ill.; J. W. Platt, administrator. Corn-planter	602,148	Apr. 12	973	212 213 214	83	196
Trapp, Carles C. and F., assignors of one-half to J. M. Morgan, Port Washington, Wis. Revolving chair	602,480	Apr. 19	1582	353	83	325
Trapp, Edward A., New York, N. Y. Bicycle-support	602,669	Apr. 19	1877	426 427	83	386
Trapp, Edward A., New York, N. Y. Bicycle-support	602,670	Apr. 19	1879	427	83	386
Trapp, Edward A., New York, N. Y. Bicycle-support	602,784	Apr. 19	2056	466 467	83	420
Trapp, Frank. (See Trapp, Carles C. and F.)	605,961	June 21	1741	400	83	1720
Trautner, Charles, Terre Haute, Ind. Device for temporarily disabling bicycles						
Travers, Fergus J. (See Jackson and Travers.)	606,478	June 28	2084	618 619	83	1921
Tremaine, Edward G., Brooklyn, and P. Lorillard, Jr., Tuxedo, N. Y., assignors to P. Lorillard Company, Jersey City, N. J. Pressing-machine	602,671	Apr. 19	1882	428	83	386
Trench, John T., Kenmare, Ireland. Pneumatic-tired wheel						
Tribune Association. (See Horgan, Stephen H., assignor.)	605,862	June 7	596	132	83	1465
Trimble, Frank, Greensburg, Ind. Mop-wringing attachment for pails	606,256	June 28	2283	528	83	1842
Trimble, John A., Interior, S. D. Non-refillable bottle	601,916	Apr. 5	563	116	83	107
Trimont Manufacturing Company. (See Childs, Eugene, assignor.)						
Triplett, Claiborne W., Leland, Oreg. Rotary engine						
Tripp, John W. (See Lanyon and Tripp.)						
Trippe, Fred H. (See Camp, Harry F., assignor.)	606,498	June 28	2707	624	83	1926
Trippett, Wesley H., Redlands, Cal. Magazine-pistol	604,507	May 24	2370	536 539	83	1126
Trosain, Otto, Hamburg, Germany. Steam-turbine	605,240	June 7	330	78	83	1415
Trotter, Charles W., Rochester, N. Y. Furnace	603,397	May 3	88	22	83	618
Trotter, Walter F., Marshalltown, Iowa. Oil or gas engine	605,363	June 7	506	133	83	1465
Troutt, James W., Elkton, Ky. Spark-arrester						
Trowbridge, Henry, *et al.* (See Brengman, John, assignor.)	606,040	June 21	1858	428	83	1740
Truba, Edward L., Detroit, Mich. Ball-bearing	603,491	May 3	463	108	83	699
Trueblood, Hezekiah L., Indianapolis, Ind. Combination saw-tool	606,605	June 28	2916	675	83	1966
Truman, Jonathan G., Lemon City, Fla. Electric motor	605,763	June 14	1275	295	83	1616
Trunk, Benjamin W., St. Joseph, Mo. Triangle	605,302	June 7	469	105 106	83	1441
Trusler, Charles L., Indianapolis, Ind. Triturator	604,095	May 17	1594	358	83	959
Trussell, Emory A., assignor to Sieber & Trussell Manufacturing Co., St. Louis, Mo. Order-holder	601,884	Apr. 5	507	104	83	95
Tucker & Dorsey Manufacturing Company. (See Dorsey, Robert L., assignor.)	603,932	May 10	1253	285	83	800
Tucker, Frank P., Somerville, Mass. Carton	601,821	Apr. 5	377	79	83	71
Tucker, Smith, assignor of one-half to G. Arnold, Medina, N. Y. Truss-pad	602,202	Apr. 12	1071	235	83	216
Tucker, William W., Hartford, Conn. Ball-bearing for cycles or velocipedes						
Tuckerman, Albert W., Wakefield, Mass. Gas-cock						
Tuer, George S. (See Fowler and Tuer.)						
Tuerk, Albert. (See Blessing, John G., assignor.)	603,214	Apr. 26	2799	630	83	577
Tunnah, James, Little Rock, Ark. Printer's chase	601,740	Apr. 5	229	45	83	44
Turbeville, John B., and M. F. Higgs, Lingleville, Tex. Washing-machine						
Turner, Albert, *et al.* (See Clarke, George R., assignor.)	602,509	Apr. 19	1686	384	83	340
Turner, Donald L., Wellington, New Zealand. Releasing device						
Turner, E. J., *et al.* (See Lynch and Hough, assignors.)						
Turner, Frank B., *et al.* (See Osborne, William W., assignor.)	605,987	June 21	1651	379	83	1704
Turner, Frederick E., Kansas City, Mo. Elevator						
Turner, Henry H., *et al.* (See Clarke, George R., assignor.)						
Turner, Herbert C., assignor to American Indicator Company, San Francisco, Cal. Station-indicator	605,986	June 21	1653	379	83	1705
Turner, William A., assignor to American Indicator Company, San Francisco, Cal. Station-indicator	604,493	May 24	2398	538	83	1119
Turpin, David R., Fairmount, Ill. Trestle	603,351	May 3	185	42	83	637

Turri, George G. (See Boddam, Edmond M. T., assignor.)						
Tust, Paul. (See Schmidt and Tust.)						
Tustison, Frank A., Montana, Kans. Combined chair, crib, cradle, bed, and walker	604,341	May 17	2057	460 461	83	1049
Tuttle, Daniel M., Oneida, N. Y. Gas-engine	604,941	May 17	1900	416 417	83	1010
Tweedale, Frederick N., *et al.* (See Hancock and Scholes, assignors.)						
Twining, Charles, Halifax, Canada. Vessel and sail and rigging therefor	606,104	June 21	1977	454 455	83	1764
Twist, Joseph F., assignor of one-half to L. D. Radgesky, San Francisco, Cal. Bicycle-saddle	605,151	June 7	171	43	83	1383
Twisted Wire Box Strap Company. (See Mitchell, Charles W., assignor.)						
Twitchell, Selden, Philadelphia, Pa. Filtering apparatus	605,152	June 7	173	43	83	1384
Tyack, Richard. (See Hopkinson and Tyack.)						
Tyden, Emil, assignor to Metropolitan Filter Company, Chicago, Ill. Water-filter	602,883	Apr. 26	2234	506	83	469
Tyler, Charles R., and C. F. Fries; said Tyler assignor to C. F. Walther, Brooklyn, N. Y. Water-heater	602,040	Apr. 5	782	169 170	83	148
Tyler, Elias M., Auburn, Cal. Reversible ratchet-wrench	603,159	Apr. 26	2716	617	83	568
Tyler, Francis M. and W. W., Auburndale, Mass. Switch-operating mechanism for street-railways	606,488	June 28	2615	608	83	1908
Tyler, William E., assignor of three-fourths to H. B. Hutchison, Aldie, J. A. Nicol, and F. E. Ransdell, Manassas, Va. Lifting-jack	605,210	June 7	282	65	83	1408
Tyler, William W. (See Tyler, Francis M. and W. W.)						
Ullman, Peter, Stafford, Ohio. Car-coupling	603,296	May 3	91	22, 23	83	619
Unbehend, Jacob J., Syracuse, N. Y. Rotary engine	606,606	June 28	2917	675 676	83	1966
Underwood, Franklin, Burr's Mills, N. Y. Fire-escape	604,096	May 17	1596	359	83	960
Underwood, John T. (See Robertson, William T., assignor.)						
Underwood, Walter H., Hutchinson, Kans. Evaporating apparatus	603,543	May 3	557	123	83	708
Union Boiler Tube Cleaner Company. (See Forsyth and Bell, assignors.)						
Union Eyelet Company. (See Smith, Stephen N., assignor.)						
Union Special Sewing Machine Company. (See McNeil, Chester, assignor.)						
Union Special Sewing Machine Company. (See Muther, Lorenz, assignor.)						
Union Special Sewing Machine Company. (See Muther and Holland, assignors.)						
Union Special Sewing Machine Company. (See Coleman, John P., assignor.)						
Union Switch and Signal Company. (See Schreuder, Jens G., assignor.)						
Union Switch and Signal Company. (See Schreuder, Jens G., assignor.)						
United Alkali Company. (See Wylde and Kynaston, assignors.)						
United Indurated Fibre Company. (See Peterson, Jesse, assignor.)						
United States Heater Company. (See Rathbone, John A., assignor.)						
United States Metallic Packing Company. (See Longstreth, Charles, assignor.)						
United States Sanitary Company. (See Taylor, James W., assignor.)						
Universal Advertising Machine Company. (See Manley, Horace A., assignor.)						
Universal Car Bearing Company. (See Fritz, Harry A., assignor.)						
Universal Car Bearing Company. (See Nulsen, Frank E., assignor.)						
Universal Loom Company. (See Emery, Abram D., assignor.)						
Universal Surface Electric Railway Company. (See Lawrence, William, assignor.)	605,082	May 31	3271	751	83	1318
Unz, Henry H., Philadelphia, Pa. Type-writing-machine ribbon-spool	604,808	May 31	2806	662	83	1246
Uptegrove, Frank A., Caney, Kans. Lifting-jack	602,884	Apr. 26	2236	506 507 508	83	470
Urban, Anton, Vienna, Austria-Hungary, assignor to Russell & Erwin Manufacturing Company, New Britain, Conn. Machine for milling variable grooves in screw-dies	603,801	May 10	1007	225 226	83	813
Urbanek, Joseph, assignor of two-thirds to T. E. Molacek and M. Palmer, Schuyler, Nebr. Corn-planter	604,809	May 31	2898	663	83	1346
Urie, James. (See Campbell and Urie.)	603,561	May 3	609	136	83	719
Urmson, William G., New Brunswick, N. J. Valve						
Urmston, Sarah. Indianapolis, Ind. Window-washer						
Usedom, Hellmuth. (See Röhl and Usedom.)						
Uthes, John E. F. (See Bossert, Frederick, assignor.)						
Vacheron, Eugene F., *et al.* (See Bourne, Philip, assignor.)						
Vail, Edward M., and G. Potter, Kewanee, Ill. Postmarking and stamp-canceling machine	606,257	June 28	2284	529	83	1842
Vail, James B., assignor of one-half to W. C. Smith, Weston, Mich. Device for tightening wire	606,178	June 21	2109	495	83	1798
Van Allen, Lucas H., *et al.* (See Richardson, Julius C., assignor.)						
Van Buren, Jafew S., assignor to Rathbone, Sard & Company, Albany, N. Y. Stove and grate	602,889	Apr. 19	1621	370	83	326
Van Buskirk, Charles L., Lodi, Cal. Conveyer for endless-rope railways	603,215	Apr. 26	2800	640	83	577
Van Buskirk, George, New Lisbon, Ind. Gate	601,991	Apr. 5	701	149	83	183
Van Cleve, Frank H. (See Marble, Webster L., assignor.)						
Van Deusen, Henry B. (See Melrose and Van Deusen.)						
Van Dorn, William T., Chicago, Ill. Draw-bar for railway-cars	606,105	June 21	1984	455	83	1765
Van Dyke, Colin I. (See Reich and Van Dyke.)						
Van Gelder, Pieter, Sowerby Bridge, assignor to W. P. Thompson, Liverpool, England. Machine for separating dust from air	602,964	Apr. 26	2388	544	83	499
Van Hoesen, Frederick T. (See Smith, Amos H., assignor.)	601,720	Apr. 5	191	37	83	38
Van Hoesen, Theodore W., Troy, N. Y. Machine for grinding glass tubes	603,614	May 3	698	153	83	734
Van Horn, Paul R., *et al.* (See Dinsmore, Robert, assignor.)	603,542	May 3	610	136	83	719
Van Melick, Joseph, Cleveland, Ohio. Combination chair, washbench, &c.	606,399	June 28	2546	590	83	1802
Van Pelt, Harmon, New Athens, Ill. Corn-shock compressor	605,083	May 31	2873	758	83	1318
Van Praag, Leonidas A., New York, N. Y. Glove						
Van Riper, Abram H., Nutley, N. J. Fire-extinguisher	606,317	June 28	2391	553	83	1864
Van Ruymbeke, Joseph. (See Jobbins, William F., assignor.)	603,241	Apr. 26	2853	651	83	598
Van Schoick, George R., assignor of one-half to F. W. Stewart, Coldwater, Mich. Wrench.						
Van Steeter, John H., and G. N. Dow, Salt Lake City, Utah. Running-gear	604,948	May 31	2139	719 720	83	1301
Van Vriesland, Adolphe L., Paris, France. Carbureter	602,041	Apr. 5	784	170	83	148
Van Wie, Peter G., assignor to Favorite Stove and Range Company, Piqua, Ohio. Gas-stove	605,311	June 7	294	66	83	1404
Vanasselt, Jacob H., Seattle, Wash. Trolley-switch	604,949	May 17	1898	418	83	1011
Vance, Alpheus J., Grand Junction, Colo. Water-lifting machine	602,580	Apr. 19	1692	370 371	83	398
Vance, Charles G., assignor of two-thirds to J. B. Vance and L. S. Goff, Spencer, W. Va. Rotary engine	602,999	Apr. 26	2445	558	83	806
Vance, J. B., *et al.* (See Vance, Charles G., assignor.)	601,992	Apr. 5	702	149	83	183
Vandegrift, Andrew J., St. Louis, Mo. Wheel	603,299	May 3	96	23	83	619
Vanderbeck, Alexis, Scammon, Kans. Electric brake mechanism						
Vanderman, William, Willimantic, Conn. Shower-bath apparatus

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Dr'g.	Official Gazette. Vol.	Page.
Vantuyl, Thomas Nichols, Iowa. Handle-bar	603,671	May 10	788	173	88	771
Varley, Thomas W., New York, assignor to himself, C. P. and R. A. Lenk, Brooklyn, N. Y. Current-indicator	606,369	June 28	2488	576	88	1868
Vaucain, Samuel M., *et al.* (See Austin, William L., assignor.)						
Vaughan, Charles W., assignor of one-fourth to J. R. Sutton, Hillsdale, Mich. Brake-pipe connection. (Reissue)	11,673	June 28	2975	690	88	1977
Vaughan, Henry H., and J. O. Pattee, St. Paul, Minn. Ball-joint for brake-couplings or other uses	605,989	June 21	1656	380	88	1706
	606,370	June 28	2489	578 / 579	88	1868
Vaughn, Charles A., Vineland, N. J. Power-hammer	605,084	May 31	2373	758	88	1818
Vaughn, James R., and M. Jenkins, Walnut Shade, Tenn. Folding hay-rake	602,115	Apr. 12	910	198	88	184
Vaughn Machine Company. (See Jones, Albert F., assignor.)						
Vedder, Irving S., Schenectady, N. Y. Egg-tester	602,412	Apr. 12	1490	321	88	366
Veeder, Curtis H., assignor to Veeder Manufacturing Company, Hartford, Conn. Machine for printing index-rings	606,434	June 28	2618	603	88	1909
Veeder Manufacturing Company. (See Veeder, Curtis H., assignor.)						
Velt, Henry E., Chicago, Ill. Binder for sheet-music, &c	603,714	May 10	853	189	88	768
Veith, Jacob, *et al.* (See Wasciniski, Alexander, assignor.)	604,163	May 17	1715	386	88	983
Veith, Jacob, Kansas City, Kans. Pocket cigarette-former	602,948	Apr. 12	1146	251	88	230
Velasko, Adolph G., Syracuse, N. Y. Undergarment						
Venetian Iron Company. (See Stewart, Theodore L., assignor.)						
Verdier, Mary E., Easton, Pa. Attachment for musical instruments						
Verlenden, Enos. (See Lord, Simeon, assignor.)						
Vermilyea, Eugene, assignor of one-half to S. Snyder and J. Metcalf, Waterford, N. Y. Knitting-machine cylinder	604,440	May 24	2298	503	88	1104
Vermilyea, Le Roy. (See Buck, James A., assignor.)						
Vernon, Thomas B., Wallington, England. Apparatus for keeping letters or other documents	602,116	Apr. 12	912	198 / 199	88	185
	604,243	May 17	1865	418	88	1012
Verpillier, Emil, and C. W. Graves, Newark, N. J. Doll						
Vetter, Alexander F., Long Island City, N. Y., assignor, by mesne assignments, to Meyrowitz Manufacturing Company, Ridgefield, N. J. Apparatus for reducing electric currents and voltage	602,709	Apr. 19	1943	441	88	398
	606,607	June 28	2916	677	88	1966
Vicars, John, Sr., Boot, T. and J. Vicars, Jr., Liverpool, England. Mechanical stoker						
Vicars, Thomas. (See Vicars, John, Sr., T., and J., Jr.)						
Vickers, Douglas, and G. T. Buckham, assignors to Vickers Sons & Co., Limited, Sheffield, England. Breech-loading ordnance	602,785	Apr. 19	2061	467 / 468	88	421
Vickers Sons & Co. (See Vickers and Buckham, assignors.)						
Vidal, Henri R., Paris, France. Making carboxylated products of triphenylmethane	603,300	May 3	98	------	88	619
Vidal, Raymond, Paris, France. Black dye and making same. (Reissue)	11,659	Apr. 5	797	------	88	151
Vile, Albion, Cardiff, England. Gage-glass mounting	604,441	May 24	2240	502	88	1104
Villard, John, and J. P. Henderson, Bonham, Tex. Match-safe	603,301	May 3	94	23	88	619
Vincent, Joseph A. (See Jones, Joseph W., assignor.)						
Vincent, Joseph A. (See Sivan, Casimir, assignor.)						
Vincent, Joseph A., Philadelphia, Pa. Combined clock and gramophone	602,490	Apr. 19	1553	354	88	325
Vincent, Joseph A., Philadelphia, Pa., assignor to Electro Gas Company, of West Virginia. Apparatus for generating acetylene gas	602,189	Apr. 12	1053	230	88	219
	601,721	Apr. 5	198	37, 38	88	36
Vine, George, Ansonia, Conn. Instrument for measuring diameters	606,318	June 28	2392	553 / 554	88	1865
Vining, Robert W., London, England. Automatic apparatus for taking photographs	602,665	Apr. 26	2240	506 / 509	88	470
Vittner, Frank, Chicago, Ill. Window						
Vogel & Brothers, William. (See Edwards, Harry M., assignor.)						
Vogeler, Henry, San Francisco, Cal. Bicycle-trainer	604,200	May 17	1790	408	88	908
Voight, Henry G., assignor to Russell & Erwin Manufacturing Company, New Britain, Conn. Latch	602,866	Apr. 26	2249	509	88	470
	602,551	Apr. 19	1626	371	88	339
Vollmer, John C., Jr., Kingston, Ill. Milk-pail rest	604,278	May 17	1980	438	88	1085
Vollrath, Louis F., San Antonio, Tex. Expanding hub						
Von Stege, Charles E. (See Kindt, Gustave F., assignor.)						
Vredenburgh, Frank C., and C. F. Lathrop, Atlantic, Iowa. Plumb-level	603,368	May 3	208	47	88	641
Vuilleumier, Olivier. (See Claret and Vuilleumier.)						
W. W. Kimball Company. (See Hedgeland, Frederick W., assignor.)	602,887	Apr. 26	2243	509 / 510	88	471
Wache, Arnold, Breslau, Germany. Carving-machine	604,810	May 31	2900	663	88	1247
Waddell, John A. L., Kansas City, Mo. Automatic jetty for deepening tidal ways	605,153	June 7	176	43, 44	88	1364
Waddell, John A. L., and I. G. Hedrick, Kansas City, Mo. Suspension-bridge						
Wade, Harry, *et al.* (See Davis, John A., assignor.)						
Wadsworth, John E. (See Yergin and Wadsworth.)	603,544	May 3	559	123	88	709
Wagenblast, Franz, New York, N. Y. Holder for hats, coats, umbrellas, &c	603,372	May 3	186	42	88	637
Wagner, Frank B., and A. W. Foote, Cleveland, Ohio. Rail-joint bridge	601,917	Apr. 5	565	117	88	107
Wagner, Hubert, Buffalo, N. D. Farrier's pincers						
Wagner, Isaac L., assignor of one-half to D. J. Farthing and W. A. McQueen, Butler, Tenn. Wagon-brake	602,786	Apr. 19	2002	466	88	421
Wahrer, Maurice. (See Doyle, Thomas M., assignor.)						
Wainwright, Jacob T., Chicago, Ill. Machine for exhausting molten metal. (Reissue)	11,671	June 21	2116	486	88	1790
Walt, Henry H., assignor to Western Electric Company, Chicago, Ill. Instrument-winding device	605,154	June 7	177	44	88	1364
Waite, Fred, Otley and J. Saville, Bradford, England. Machine for folding and wrapping newspapers	601,741	Apr. 5	230	45, 46	88	44
	604,442	May 24	2241	508	88	1104
Waitt, Arthur M. Cleveland, Ohio. Car-buffer	602,491	Apr. 19	1556	354	88	326
Walder, Jacob, deceased, Paterson, N. J.; M. Walder, executrix. Loom						
Walder, Mary, executrix. (See Walder, Jacob.)	605,264	June 7	509	123	88	1465
Wales, Joshua R., Marlborough, Mass. Bookbinding	605,308	June 7	472	106	88	1441
Walker, Arthur W., Malden, Mass. Cooking-stove	605,940	June 21	1659	380 / 381	88	1706
Walker, Byron A., Erie, Pa. Bearing						
Walker Company. (See Zweigbergk, Thorsten von, assignor.)	604,181	May 17	1758	------	88	908
Walker, George, New York, N. Y. Pyroxylin composition						
Walker, H. R., *et al.* (See Lobdell, Emons H., assignor.)						
Walker, Henry V. (See Taylor and Walker.)	604,097	May 17	1597	369	88	960
Walker, James E. A., Walkerton, Canada. Street-car fender						
Walker, John. (See Simpson, Walker, Strang, and Farnworth.)	601,722	Apr. 5	194	38	88	36
Walker, Lillian S., Boston, Mass. Corset						
Walker, Michel. (See Kittelsen and Walker.)						
Walker, Thomas C., assignor to Midland Foundry and Machine Works Company, Denver, Colo. Attachment for lathes	602,965	Apr. 26	2290	545	88	499
	604,443	May 24	2243	503	88	1105
Walker, William, Summit, N. J. Bottle-stopper						

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Dr'g.	Official Gazette. Vol.	Page.
Walkins, Louis E., assignor of one-half to F. W. Dickinson, Springfield, Mass. Trolley-device for electric-railway cars	603,673	May 10	789	173 / 174	88	771
Walkins, Louis E., assignor of one-half to F. W. Dickinson, Springfield, Mass. Rail-conductor for electric systems	604,098	May 17	1599	389	88	961
Walkins, Louis E., assignor of one-half to F. W. Dickinson, Springfield, Mass. Third-rail underground electric-railway system	605,096	May 31	2329	764	88	1329
	604,811	May 31	2300	663	88	1247
Wallace, Robert H., New Concord, Ohio. Running-gear for vehicles	603,906	Apr. 26	2308	545	88	499
Wallach, Leopold, New York, N. Y. Vacuum-tube lantern						
Waller, Arthur R., Belleville, assignor to Burger Manufacturing Company, Hoboken, N. J. Sheet-metal can	602,643	Apr. 19	1880	417	88	376
Walling, James H., *et al.* (See Boening, Ernest, assignor.)						
Wallis, D. R., *et al.* (See Taylor, George H., assignor.)	601,689	Apr. 5	119	23	88	35
Wallis, George W., Saginaw, Mich. Hose-coupling reshaper	604,444	May 24	2243	503 / 504	88	1105
Wallis, Mounteney, Philadelphia, Pa. Bicycle-handle						
Wallis, R. C., *et al.* (See Taylor, George H., assignor.)						
Walquist, Frank W., G. Nelson, and J. L. Gronquist, Brooklyn, N. Y.; said Walquist assignor of one-third to H. O. Towles, Washington, D. C. Saw	604,279	May 17	1931	433	88	1085
Walrath, Nelson J. (See Rowe, Myron, assignor.)						
Walsh, Edward, Jr. (See Hartung, Charles C., assignor.)	605,598	June 14	852	190	88	1537
Walsh, Francis A., Milwaukee, Wis. Closure for vessels	603,988	Apr. 26	2244	510	88	471
Walsh, James H. (See Ryan, Thomas W., assignor.)						
Walsh, John E., New York, N. Y. Lightering vessel	601,600	Apr. 5	190	23	88	36
Walter Automatic Air Coupler Company. (See Pugh, William J., assignor.)						
Walter, John P., Edgerton, Ohio. Tool-handle	603,809	May 3	96	24	88	630
Walters, James H., Mooresville, N. C., and W. H. Walters, Waynesborough, Ga. Gin-saw-filing machine	603,615	May 3	668	154	88	784
Walters, William H. (See Walters, James H. and W. H.)						
Walters, William J., and W. W. Rohrer, Guthrie, Okla. Ter. Curtain-fixture	604,553	May 24	2455	558	88	1141
Walther, Charles F. (See Tyler and Price, assignors.)						
Walton, Ernest, and F. Macke, assignors of one-third to W. M. Dillon, Sterling, Ill. Nail-making machine	604,812	May 31	2901	663 / 664	88	1247
Walton, Frederick H., Orono, Me. Rotary lawn-rake	604,944	May 17	1807	418 / 419	88	1012
Walton, Roscoe. (See Johnston, William F., assignor.)						
Wands, John C., St. Louis Mo. Air-brake controller	604,949	May 31	3131	730	88	1392
Wappler, Fredrick H. (See Wappler, Reinhold H. and F. H.)						
Wappler, Reinhold H. and F. H., New York, N. Y. Rheostat for electric lamps	604,812	May 31	2904	664	88	1247
Ward, Edward L. C. (See Dickinson, James Q., assignor.)	605,589	June 14	854	200	88	1537
Ward, Ezra H., assignor to J. W. Keogh, Chicago, Ill. Shredding-knife	604,814	May 31	2905	664 / 665	88	1247
Ward, William E., Montclair, N. J. Desk-lamp						
Ward, William H., Dodd City, Tex. Plow						
Warder, Bushnell & Glessner Company. (See Bauer, William F., assignor.)						
Ware, Henry P. (See Stender, Herman, assignor.)						
Waring, George E., Jr., Newport, R. I., assignor to Drainage Construction Company, Boston, Mass. Sewer construction	601,742	Apr. 5	226	46	88	46
	605,155	June 7	178	44, 45	88	1365
Warman, John L., Chicago, Ill. Velocipede						
Warner, Alfred D., *et al.* (See Parsons, John H., assignor.)						
Warner, Charles, Jr., *et al.* (See Parsons, John H., assignor.)						
Warner Elevator Manufacturing Company. (See Davis, Jenkin P., assignor.)	603,353	May 3	187	43	88	698
Warner, Lewis E., Northampton, Mass. Shaft-adjusting device						
Warner, Richard C. (See Johnson, Frank M., assignor.)	604,099	May 17	1601	360	88	961
Warner, William H., Melvern, Kans. Wire-fence-weaving machine	605,156	June 7	181	45	88	1235
Warnock, Frank, Elyria, Ohio. Coupling for pneumatic tires	605,440	June 7	725	163	88	1402
Warren, Frank W., San Francisco, Cal. Pencil-splicer	605,982	June 21	1743	400 / 401	88	1721
Warren, Herbert C., Hartford, Conn. Machine for generating gear-teeth	605,983	June 21	1747	401	88	1721
Warren, Herbert C., Hartford, Conn. Gear-tooth-generating machine	601,923	Apr. 5	370	79, 80	88	71
Warren, Jabez T., Buffalo, N. Y. Hot-air furnace	603,563	May 3	611	136	88	730
Warren, John D., Chicago, Ill. Hardware-drawer						
Warren Webster & Company. (See Leitch, Meredith, assignor.)						
Warter, Antoine, Newark, assignor of one-half to W. L. Glorieux, Irvington, N. J. Pneumatic elevating device for liquids	605,212	June 7	265	66	88	1404
	603,099	Apr. 26	2262	522	88	530
Warth, Nathaniel G., Indianapolis, Ind. Electric cable	604,445	May 24	2245	504	88	1105
Wartmann, Otto, London, England. Cigar-machine						
Wasciniski, Alexander, Jersey City, N. J., assignor to E. Hahner, C. Franck, and J. Veith, New York, N. Y. Violin or mandolin cithern	605,764	June 14	1276	295	88	1616
Washburn, George A., assignor to Ohio Storage Battery Company, Cleveland, Ohio. Storage battery	602,176	Apr. 12	1096	225	88	207
Washburn & Moen Manufacturing Company. (See Cook, Leroy, assignor.)						
Washburn, William G., Thomaston, Me. Garment-supporter	604,184	May 17	1667	374	88	973
Washburne, James V., Waterbury, Conn. Glove-fastener	603,308	May 3	99	24	88	630
Waterbury Machine Company. (See Lamb, George B., assignor.)						
Waterer, Heeea, Philadelphia, Pa. Jardinière	603,498	May 3	464	108	88	990
Waterman, Lewis E., Brooklyn, N. Y. Fountain-pen	604,690	May 24	2667	616	88	1187
Waterman, Lewis E., assignor to Deere & Mansur Company, Moline, Ill. Check-row corn-planter	603,584	May 3	612	135 / 137	88	730
Waters, James K. (See Weddell and Waters.)						
Waterson, Alfred H. (See Gleason, Jackobsled and Waterson.)						
Watkinson, Frederick. (See Sydenham, Watkinson, and Sydenham.)	605,319	June 28	2395	555	88	1365
Watrous, Henry G., Wallingford, Conn. Auger	601,918	Apr. 5	566	117	88	107
Watson, Guy M., New Haven, Conn. Slack-adjuster for brake-gear						
Watson, Henry P., *et al.* (See Griffin, Russell B., assignor.)						
Watson, Louis T., *et al.* (See Griffin, Russell B., assignor.)						
Watson, Seth F. (See Watson, William B., assignor.)	601,691	Apr. 5	121	24	88	36
Watson, William B., assignor of one-half to S. F. Watson, Richmond, Ind. Tree-box	605,765	June 14	1278	295 / 296 / 297	88	1616
Watson, William D., and T. Humphreys, Rochdale, England; said Humphreys assignor to said Watson. Apparatus for supplying or measuring currents of electricity	603,160	Apr. 26	2717	616	88	568
Watson, William J. B., Antwerp, Belgium. Cycle-wheel	604,446	May 24	2247	504	88	1105
Wattles, Joseph W., Canton, Mass. Doffer-guard and stopper for lubricating-tubes for spindles	605,890	June 14	967	234	88	1538
Watts, John T., Golden, Ill. Weather-strip	605,580	June 14	855	200	88	1538
Wattson, Edward F., *et al.* (See Hachenberg, Louis, assignor.)						
Way, Charles A., Charlestown, N. H. Tricycle for invalids

ALPHABETICAL LIST OF INVENTIONS.

Invention.	Name.	No.	Date.	Monthly volume. Specification.	Monthly volume. Drawing.	Official Gazette. Volume.	Official Gazette. Page.
Abdominal supporter	S. L. Fowler	606,410	June 28	2567	504	83	1897
Abrading mechanism	W. A. McCool	602,349	Apr. 12	1312	293	83	264
Accumulator-plate	I. Rosler	604,418	May 24	2194	492	83	1098
Acetosulfanilate. Making alkaline	C. F. M. Schaerges and P. Schwarz.	602,646	Apr. 19	1826	.....	83	375
Acetyl derivative of phenetidin	C. F. M. Schaerges and P. Schwarz.	602,690	Apr. 19	1912	.....	83	392
Acetylene-generator	E. N. Dickerson	603,678	May 10	797	175	83	772
Acid alkyl esters. Making orthosulfamin-benzoic-	B. R. Seifert	604,503	May 24	2264	.....	83	1135
Acid and making same. Amidonaphtholdisulfo-	F. Bender	606,437	June 28	2624	.....	83	1910
Acid condenser. Nitric	J. V. Skoglund	602,412	May 3	290	65	83	656
Acid. Making hydrochloric	J. R. Wylde and J. W. Kynaston	605,960	June 7	605	134	83	1467
Acid. Making pyrocatechin-sulfonic	P. P. Monnet	604,066	May 17	1538	.....	83	948
Acid. Producing orthotoluene sulfonic	W. Dieterle	602,629	Apr. 19	1896	.....	83	389
Acid sulfates of soda. Utilizing	R. E. Chatfield	605,097	June 14	1173	.....	83	1596
Acids. Condensation product from salicylic and gallic	O. Doebner	602,834	Apr. 26	2163	.....	83	455
Adding and recording apparatus	W. J. Ensworth	605,705	June 14	1186	273, 274	83	1598
Adding-machine	C. C. Clifford	602,154	Apr. 12	985	216, 217	83	198
Adding-machine	R. E. Kimball	605,780	June 14	1343	307, 308, 309	83	1627
Adhesive compound and producing same	C. M. Higgins	604,584	May 24	2509	.....	83	1153
Adjustable chair	J. J. White	606,612	June 28	2925	678, 679	83	1968
Adjustable wrench	W. O. Parker	603,575	May 3	602	194	83	718
Advertising device	M. Duffner	603,057	Apr. 26	2331	575	83	585
Advertising or sign lamp	S. A. Bhise	603,251	May 3	14	4	83	603
Aerated-water fountain or engine	A. Brake and R. J. McKee	606,373	June 28	2498	580	83	1894
Agricultural implement	H. C. Milburn	602,083	Apr. 5	771	167	83	146
Air and gas mixing apparatus	W. C. Clarke	602,526	Apr. 26	2157	499	83	454
Air and steam brake coupling. Automatic	W. J. Pugh	601,905	Apr. 5	543	113, 118	83	103
Air-brake	W. H. Clowry	605,394	June 7	643	144	83	1475
Air-brake	J. J. Nef	602,094	Apr. 12	873	189, 190	83	177
Air-brake	H. S. Park	605,904	June 21	1580	363	83	1698
Air-brake	H. S. Park	605,905	June 21	1583	363, 364	83	1698
Air-brake controller	J. C. Wands	604,244	May 17	1867	418, 419	83	1012
Air-compressing apparatus for vessels	E. Bottini	604,962	May 31	3150	724	83	1293
Air-compressor	O. H. Brigham	604,717	May 31	2756	630	83	1219
Air-compressor	F. Richards	606,428	June 28	2008	601	83	1906
Air-compressor	H. C. Sergeant	602,877	Apr. 26	2225	504	83	466
Air, &c. Compressor for	C. Cummings	603,425	May 3	314	71	83	660
Air-compressor governor	W. F. Stark	602,947	Apr. 12	1143	251	83	220
Air-compressor. Hydraulic	F. Richards	602,473	Apr. 19	1531	349	83	321
Air-compressor valve	J. Jauch	603,105	Apr. 26	2327	507	83	543
Air distributer or spreader	L. T. Gibbs	604,745	May 31	2796	640	83	1297
Air engine. Compressed-	P. Van Gelder	602,964	Apr. 26	2268	544	83	499
Air. Machine for separating dust from	D. Hall and J. H. Kay	602,745	Apr. 19	1997	459	83	406
Air. Means for humidifying	A. Koehler	605,438	June 7	719	162	83	1491

Alloy	F. A. Cothias. (Reissue)	11,660	Apr. 19	2199	.....	83	436
Alloying iron and hydrogen. Process of and apparatus for	G. W. Gesner	604,580	May 24	2503	509	83	1151
Aluminates. Making alkaline	D. A. Péniakoff	603,657	May 10	761	.....	83	765
Aluminium-reducing pot and means for tapping same	A. Dickey	603,575	Apr. 19	1606	385	83	350
Aluminium sulfid and making same	D. A. Péniakoff	606,576	June 28	2367	.....	83	1958
Aluminium sulfid and reducing same to metallic state. Producing	H. S. Blackmore	605,360	June 7	621	.....	83	1470
Aluminium sulfid. Making	H. S. Blackmore	605,378	June 7	619	.....	83	1470
Aluminium sulfid. Making	H. S. Blackmore	605,812	June 14	1884	317	83	1635
Amalgamator and separator. Centrifugal	C. L. Garland, J., and S. E. Murray	604,978	May 31	3176	788	83	1300

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Amalgams, &c. Electrolytic production of	E. and G. Andreoli	605,885	June 21	1451	333	83	1667
Ammonia and waste products from garbage. Process of and apparatus for recovering	J. B. Taylor and H. V. Walker	605,668	May 10	779	173	83	793
Anchor	L. M. Bowers	602,719	Apr. 19	1957	445	83	401
Anchor Stockless	G. H. Burrows	605,076	June 7	15	4,5	83	1256
Angling device	J. J. Dempsey	605,536	June 14	864	208	83	1589
Animal-destroyer	O. J. Merritt	605,890	June 21	1563	360	83	1668
Animal-trap	J. Davidson	606,052	June 21	1881	433	83	1745
Animal-trap	D. Luye	606,566	June 28	2849	667	83	1954
Animal-trap-setting device	G. W. Sutton	604,340	May 17	2066	460	83	1049
Annunciator and spring-jack. Combined	C. W Selvidge	602,410	Apr. 12	1418	330	83	265
Ant-trap	J. H. Poole	606,096	June 21	1831	422	83	1735
Antirefilling device	E. Behring	606,042	June 21	1803		83	1741
Antitoxin and making same. Diphtheria	O. O. Dinsmore and A. M. Ireland	603,028	Apr. 26	9470	563	83	516
Anvils. Welding or swaging attachment for	C. P. Brown	605,396	June 7	230	141	83	1473
Applicator	O. Förster	604,658	May 24	2086	501	83	1176
Arch-stone	A. L. Riker	604,942	May 31	2053	676	83	1297
Armature-coils. Former for winding	J. L. Matthews	604,940	May 31	3119	717	83	1299
Armor. Protective covering for ships'	W. H. Bevans	605,377	June 7	617	138 139	83	1470
Artillery field-mount	S. M. Smith	601,845	Apr. 5	444	80	83	56
Ash-receiver. Safety	C. H. Oertle	602,097	Apr. 12	880	191	83	176
Asparagus-holder	F. A. Hetherington	606,011	June 21	1804	415	83	1731
Asphalt. Melting-kettle for preparing	J. G. Ils	606,140	June 21	2061	473	83	1779
Assay-furnace. Portable	W. S. Frost	606,070	Apr. 12	884	181	83	169
Atomizer	R. W. Prescott	606,240	June 28	2249	520	83	1894
Atomizer	A. Y. Pearl	606,575	June 28	2848	660	83	1957
Auger	H. G. Watrous	606,319	June 28	2295	525	83	1665
Auger	L. H. Sholder	605,614	June 14	1015	234	83	1566
Auger and cutter. Combined	T. A. Gannoe	605,781	June 14	1331	305	83	1695
Auger-handle	J. B. Cornwall	604,971	May 31	3168	728	83	1298
Auger. Packing-	J. Evans	605,411	June 7	688	151	83	1484
Auger. Post-	J. E. Eckert	604,914	May 31	3086	709	83	1933
Autoharp	L. L. Cubbedge	606,517	June 28	2741	633	83	1955
Automatic alarm for protecting crops, &c	J. C. Laporte	604,408	May 24	2160	485	83	1059
Automatic gate	J. F. Gaylord	605,213	June 7	497	109	83	1444
Automatic-lever switch	A. A. De Witt	602,128	Apr. 12	928	203	83	186
Automatic lubricator	F. W. Ross	606,308	June 28	2532	587	83	1890
Automatic switch	E. Billburgh	605,685	June 14	1048	241	83	1573
Awning	J. D. Hogan	602,601	May 10	820	181	83	777
Awning	J. W. Richards	602,773	Apr. 19	2037	461	83	416
Awning	J. F. Sargent	604,087	May 17	1589	354	83	957
Awning. Window-	E. J. Jenkins	605,878	June 21	1535	354	83	1668
Ax	H. P. Schwartz	604,943	May 31	3123	718	83	1290
Ax	W. L. Marble	604,694	May 24	2279	526	83	1165
Ax safety-guard	J. S. Patten	606,233	June 28	2228	513	83	1881
Axle boxes. Dust-guard for car-	R. M. Hasbrouck	602,539	Apr. 19	1640	374	83	341
Axle. Car-	J. F. Dunigan	605,863	June 21	1513	348	83	1677
Axle-gage	S. Austin	601,827	Apr. 5	451	98	83	59
Axle lubricator Car-	W. A. Hammer	602,096	May 10	727	168	83	758
Axle-repairing apparatus	T. N. Crook	602,208	Apr. 12	1250	275	83	251
Axle. Safety-	B. Jassen	605,886	June 14	1416	328	83	1641
Axle. Self-oiling	O. C. Hall	606,240	Apr. 26	2251	526	83	422
Axles. Manufacture of carriage-	L. B. J. Lyon	602,861	Apr. 26	2305	499	83	464
Baby-harness	R. H. Canfield	602,974	Apr. 26	2404	548	83	501
Back-pedaling brake	C. F. Dinkle	606,965	May 3	40	11	83	606
Back-pedaling brake	F. Ecaubert and H. Serrell	602,634	Apr. 19	1805	419	83	371
Back-pedaling brake	S. Fader	606,395	May 3	141	33	83	689
Back-pedaling brake	L. E. Hoffman	606,217	June 28	2208	506	83	1886
Back-pedaling brake	J. E. Hussey and A. I. Summers	605,718	June 14	1205	278 279	83	1608
Back-pedaling brake	W. A. Leggo, Jr	605,643	June 14	1076	247	83	1576
Back-pedaling brake	A. Zwirow	606,310	May 3	112	26	83	693
Back-pedaling brake	A. Phelps	604,213	May 17	1810	407	83	1001
Badge							
Bag: *See* Mail-bag. Rubber water-bag.	A. L. Ross	605,343	June 7	554	123	83	1455
Bag-closure	A. Arkell	602,674	May 10	792	174	83	771
Bag-fastener	W. J. Ayres	605,858	June 21	1457	334	83	1668
Bag holder or clamp	C. N. Choate	606,274	June 28	2311	535	83	1846
Bag holder. Seed-	J. Kleinstuber	602,145	Apr. 26	2700	613	83	559
Bag hook. Chatelaine or other	J. L. Wirt	605,088	May 31	3079	753	83	1280
Bag or box	W. F. Beasley	605,068	June 7	3	1	83	1268
Bag or pouch	G. S. Prichard and J. W. Taylor	602,915	Apr. 26	2293	524	83	461
Bag-stringing machine	M. Redgrave	602,736	May 10	801	196	83	790
Bagatelle-board	C. L. Bessonette	602,250	May 3	13	4	83	605
Baling cotton	C. L. Bessonette	602,249	May 3	11	3	83	605
Baling-press	P. K. Dederick	602,264	May 3	38	10	83	606
Baling-press	P. K. Dederick	605,272	June 7	413	98	83	1430
Baling-press	J. H. Holmgreen	604,284	May 17	2019	459	83	1042
Baling-press	F. L. Dyer	601,806	Apr. 5	344	70, 71	83	64
Baling press. Cotton-							
Ball: *See* Foot-ball. Twine-ball.	R. E. Swartz	605,527	June 14	850	190	83	1586
Ball-and-socket clamp	H. H. Vaughan and J. O. Pattee	605,989	June 21	1656	380	83	1706
Ball-joint for brake-couplings, &c	R. Steinbach	602,977	May 10	1317	303	83	573
Ball-mill	H. Brassch	602,798	Apr. 19	2096	473	83	427
Ballot-box	F. E. Holt	602,011	Apr. 5	733	167	83	139
Ballot-counting apparatus	W. N. Durant and W. H. Prichard	606,688	June 28	2846	663	83	1972
Bamboo rods. Reducing and shaping	J. F. Hodgen	601,902	Apr. 5	341	80	83	64
Band-cutter and feeder	J. Brandt	601,804	Apr. 5	2528	589	83	1107
Banjo	W. J. McLean	604,630	May 24	63	12	83	13
Banjo-bell	C. Kaestner	601,658	Apr. 5		128 129	83	194
Barrel-cleaner	W. Hartmann	601,960	Apr. 5	660	150	83	66
Barrel-filling apparatus	J. V. Berg	601,808	Apr. 5	389	69	83	66
Barrel-lining							

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Barrel-washer	C. Kaestner	605,879	June 21	1541	354 355	83	1668
Barrel-washer	G. Schock	605,188	June 7	126	32, 33	83	1276
Barrel-washer	G. Schock	605,189	June 7	131	33, 34	83	1276
Barrel-washer	G. J. Cave	602,695	Apr. 26	2152	466	83	453
Barrels, crates, &c. Fastener for	G. F. Thompson	603,348	May 3	188	41	83	827
Barrels, &c. Removable head or cover for	W. Mason	605,111	June 7	73	21	83	787
Barrels to stocks. Detachably uniting	E. Hammann	603,727	May 10	675	194	83	1635
Basin-fixture	F. S. Chase	605,813	June 14	1395	318	83	1549
Basin-plug thimble	T. B. Johnson	605,675	June 14	1135	263	83	1549
Basket	S. O. Burchfield	603,879	May 10	1151	250	83	840
Basket. Folding	T. Crebbin	604,457	May 24	2367	509 510	83	1109
Basket-making machine	J. E. Durham and J. E. Devine	605,408	June 7	676	150	83	1488
Basket-making machine	R. E. Reed	601,778	Apr. 5	297	59, 60	83	56
Basket-making machine							
Bath: *See* Cabinet-bath.	W. H. Callaghan	603,171	Apr. 26	2732	622	83	564
Bath apparatus. Shower-	W. Vanderman	603,299	May 3	92	23	83	619
Bath apparatus. Shower-	R. M. Irwin	601,691	Apr. 5	514	106	83	97
Bath-cabinet. Portable	H. and H. E. Law	601,685	Apr. 5	509	64	83	75
Bath-gown	H. Strauss	604,803	May 31	2989	660 661	83	1945
Bath-tub attachment	D. D. Buick	603,254	May 3	21	6	83	604
Bath-tub leg	W. Burrows	602,125	Apr. 12	924	209	83	187
Bath-tub seat	M. M. Shepard	601,781	Apr. 5	308	61	83	59
Bathing-suit	J. D. Darling	603,361	May 3	199		83	640
Batteries. Making peroxid of lead for galvanic							
Battery: *See* Fluid-battery. Storage battery. Galvanic battery. Voltaic battery. Secondary battery. Water-battery.	G. Hart	605,424	June 7	701	156	83	1488
Battery plates. Connector for storage-	A. C. Crofton	603,499	May 3	474	105	83	629
Battery purposes. Making plates for electric-	A. J. Johnson	604,153	May 17	1697	382 383	83	980
Bayonet. Horse-power	B. A. Walker	605,940	June 21	1659	380 381	83	1706
Bearing	J. R. Mikesell	605,499	June 14	810	187 188	83	1529
Bearing and hub. Axle-	C. B. Hobron	602,047	Apr. 5	798	178	83	150
Bearing. Antifriction-	C. B. Hobron	603,642	May 10	738	165	83	780
Bearing. Antifriction-	J. E. Lawrence	606,485	June 28	2695	621	83	1924
Bearing. Antifriction-	E. Childs	604,008	May 10	1414	316	83	896
Bearing. Antifriction hub or wheel	C. Faulkner	603,627	May 10	711	159	83	755
Bearing. Axle-	W. S. Gubelmann	605,870	June 21	1523	350	83	1679
Bearing. Ball-	F. Gustaveson	602,701	Apr. 19	1931	438	83	306
Bearing. Ball-	O. Lunde	602,705	Apr. 19	1937	440	83	307
Bearing. Ball-	S. T. Randolph	606,241	June 28	2250	520	83	1894
Bearing. Ball-	J. R. Saucier	606,491	June 28	2705	623	83	1936
Bearing. Ball-	E. L. Trube	606,040	June 21	1858	428	83	1740
Bearing. Ball-	H. A. Fritz	605,817	June 14	1399	320	83	1638
Bearing. Car-axle	F. E. Nulsen	605,827	June 14	1417	323	83	1641
Bearing. Car-axle	P. H. Murphy	602,089	Apr. 12	866	186	83	175
Bearing. Center-	P. H. Murphy	602,090	Apr. 12	867	186	83	176
Bearing. Center-	J. Meyrick, Jr	603,570	May 3	596	133	83	717
Bearing device. Ball-	W. W. Tucker	601,821	Apr. 5	377	79	83	71
Bearing for cycles or velocipedes. Ball-	W. F. Bauer	603,393	May 10	1145	258	83	889
Bearing. Roller-	E. W. Davis	603,589	May 3	624	139	83	723
Bearing. Roller-	E. W. Haviland	602,749	Apr. 19	2003	453	83	409
Bearing. Roller-	F. G. Susemihl and A. Torrey	605,147	June 7	165	41	83	1382
Bearing. Roller-	H. Timken and R. Heinselman	606,696	June 28	2970	660	83	1976
Bearing. Roller-	C. Sellers	602,589	Apr. 19	1790	391 392	83	335
Bearing. Thrust-	H. Timken and R. Heinselman	606,695	June 28	2968	660	83	1976
Bearing. Vehicle roller-	R. C. Patterson	602,100	Apr. 12	895	198	83	179
Bearing. Vehicle-wheel axle-	H. B. Keiper	604,678	May 24	2264	510	83	1183
Bearings. Ball-retainer for antifriction-	A. A. Wheat	606,174	June 21	2105	484	83	1787
Beating or washing engine	J. Q. Dickinson	603,181	Apr. 26	2675	607	83	554
Bed	E. E. Munger	602,347	Apr. 12	1309	291	83	264
Bed	P. B. Rooney	605,136	June 7	124	31, 32	83	1275
Bed	H. M. Martin	603,651	May 10	751	166 167	83	763
Bed. Adjustable	T. H. Campbell	602,055	Apr. 12	905	174	83	164
Bed attachment	J. B. Ryan	605,660	June 14	1143	265	83	1560
Bed-bottom	I. D. Creason	603,353	May 3	573	127	83	713
Bedclothes-holder	R. T. Palmer, Jr., and F. W. Mercer	604,414	May 24	2189	490	83	1094
Bed-comfortables. Device for supporting and stretching	R. C. Odell	605,126	June 7	99	26	83	1371
Bed. Folding	J. M. Scribner	606,247	June 28	2267	523 524	83	1889
Bed. Invalid-	W. W. Baldwin	605,660	June 14	1105	255	83	1568
Bed. Metallic	A. B. Eighmy	604,915	May 31	3087	709	83	1932
Bed-pan	A. Mandl	604,997	May 31	3208	737	83	1305
Bed. Sofa-	J. F. Phagan	605,009	May 31	3227	743	83	1310
Bed-spring stretcher	F. M. Tinkham	604,947	May 31	3128	719	83	1301
Bedstead	A. G. Duwe	602,656	Apr. 19	1941	419	83	378
Bedstead-brace	F. Eagon	605,510	June 7	493	108	83	1444
Bedstead corner-piece	A. J. Goodwin	603,632	May 10	721	161	83	757
Bedstead. Invalid-	B. S. Groves	605,989	June 21	1821	350	83	1679
Bedstead securing device	G. Brand	605,266	June 7	435	98	83	1435
Bedsteads. Reversible rail-grip for	F. Michel	601,819	Apr. 5	364	75	83	69
Beef-roaster	S. H. Atchison	606,113	June 21	1905	458	83	1708
Beer governor and pressure-regulator. Automatic steam-	B. Rinke	604,791	May 31	2872	656	83	1941
Beer-pipe cleaner	H. H. Young	601,926	Apr. 5	576	130	83	110
Beeves. Machine for splitting	C. Jetschick	604,884	May 31	3036	695	83	1271
Bell. Bicycle-							

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Bell. Bicycle	J. Keith	604,356	May 17	2085	467	83	1055
Bell. Bicycle	H. G. Martin	603,379	May 3	62	15	83	613
Bell. Bicycle	W. G. Toepfer	605,986	June 21	1648	378	83	1764
Bell. Bicycle	J. G. Peterson	603,046	Apr. 26	2516	570	83	223
Bell striking mechanism	H. Caroll	604,208	May 17	1967	440	83	1088
Belt	H. J. Galsman	604,284	Apr. 26	2435	564	83	516
Belt	C. L. Stephenson	603,186	Apr. 26	2715	617	83	561
Belt attachment. Waist-	W. P. Carley and W. T. Rickards	605,519	June 28	2733	631	83	1981
Belt-clamp	A. J. Taylor	604,906	May 31	2698	661	83	1945
Belt. Electrical	A. Christensen	606,376	June 28	2506	589	83	1895
Belt. Endless							
Bench:							
See Hothouse tile bench.							
Bench clamp and dog. Automatic	J. P. Rogers	603,970	May 10	1309	300	83	871
Bending-machine	C. Seymour	603,995	May 10	1343	322	83	857
Berth curtain-rod fixture	J. Kirby, Jr.	603,643	May 10	730	165	83	700
Bicycle	J. A. Anderson	604,011	May 17	1431	321	83	980

Bicycle-brake	C. Rondell	601,977	Apr. 5	665	145	83	120
Bicycle bundle-carrier	C. M. McDonald	603,916	May 10	1226	278	83	855
Bicycle-canopy	J. J. Metzger	604,294	May 17	1900	439	83	1061
Bicycle-canopy	C. W. Bernson	602,545	Apr. 19	1649	375	83	342
Bicycle-chain adjustment	G. C. Savage	602,000	Apr. 5	717	158	83	125
Bicycle-chain adjustment	E. Fay	604,166	May 17	1723	388	83	994
Bicycle-chain-cleaning device. Automatic	B. H. Divine	605,453	June 7	741	166	83	1405
Bicycle-coaster	E. W. Swelgard	603,501	May 3	478	106	83	692
Bicycle combination-tool	H. Ellar	605,799	June 14	1956	313	83	1632
Bicycle-coupling	P. T. Ripley	605,472	June 14	767	176	83	1321
Bicycle-coupling	J. G. Brown	603,149	Apr. 26	2704	614	83	550
Bicycle-crank	T. Midgley	602,049	Apr. 19	799	173	83	163
Bicycle crank-hanger	G. M. Beard	603,142	Apr. 26	2696	612	83	557
Bicycle crank-shaft	L. E. Hoffman	605,188	June 7	236	55	83	1396
Bicycle crank-shaft and bearing	H. W. Johnstone	603,102	Apr. 12	1005	220	83	208
Bicycle driving connection	W. S. Kellogg	603,906	Apr. 26	2981	521	83	477
Bicycle driving-gear	W. H. G. King	604,734	May 31	2706	628	83	1221
Bicycle driving-gear	F. B. Case	602,012	Apr. 5	734	157	83	139
Bicycle fork-head	E. Ivins	602,013	Apr. 5	735	157	83	139
Bicycle fork side	E. Ivins	604,743	May 31	2705	630	83	1235
Bicycle fork side	W. H. Evans	604,886	May 31	2946	673	83	1955
Bicycle-frame	J. R. Nagell	603,260	May 3	76	20	83	616
Bicycle-frame	B. P. Ryder	602,209	Apr. 12	1247	300	83	272
Bicycle-frame	A. B. Simonds	602,844	Apr. 26	2180	494	83	439
Bicycle-frame	R. Felsche	603,023	Apr. 19	1785	407	83	307
Bicycle-frames. Machine for composing	H. Keller	604,444	May 24	2243	503 / 504	83	1105
Bicycle-frames. Machine for setting up, drilling, and pinning	M. Wallis	603,177	Apr. 26	2742	624	83	567
Bicycle-handle	E. E. Crocker	602,600	Apr. 19	1741	397	83	339
Bicycle handle-bar	G. S. Green	602,016	Apr. 5	739	159	83	140
Bicycle handle-bar	H. H. Johnson	601,812	Apr. 5	625	75	83	69
Bicycle handle-bar	E. W. McCready	603,905	May 10	1361	309	83	883
Bicycle handle-bar	G. G. Powell	601,694	Apr. 5	3	1	83	3
Bicycle handle-bar	G. M. Beard	606,192	June 28	2141	491	83	1813
Bicycle handle-bar. Adjustable	W. C. Dayhoff	602,015	Apr. 5	738	159	83	140
Bicycle handle-bar. Adjustable	F. Johnson	602,095	Apr. 12	974	199	83	177
Bicycle handle-bar. Adjustable	G. H. Newell	604,371	May 24	2117	475	83	1061
Bicycle handle-bar and handle	W. H. Cook	605,625	June 14	1049	241	83	1573
Bicycle-handle. Collapsible and adjustable	J. C. Blanchard, Jr						
Bicycle-handle. Removable							

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Bicycle-keeper	R. D. Bradley	605,698	June 14	1051	242	83	1573
Bicycle-lock	A. Köhl	604,536	May 24	2421	551	83	1135
Bicycle-lock	F. C. McDonald	601,856	Apr. 5	465	94	83	95
Bicycle-lock	D. Bowman	606,118	June 21	2004	459	83	1769
Bicycle lock and holder. Combined	G. L. Grass	602,397	Apr. 12	1402	316	83	232
Bicycle-lock. Automatic	J. C. Barr	604,452	May 24	2259	507	83	1107
Bicycle locking device	F. H. Wright	603,730	May 10	964	216	83	804
Bicycle locking device	C. E. Beck	603,018	Apr. 26	2474	561	83	514
Bicycle luggage-carrier	C. J. Brown	601,701	Apr. 5	184	27	83	29
Bicycle luggage-carrier	V. Bélanger	605,944	June 21	1672	337	83	1670
Bicycle mechanical movement	C. L. and A. L. Seaquest	606,091	June 21	1957	450	83	1760
Bicycle mud-guard	W. F. Williams	603,545	May 3	560	123	83	709
Bicycle or tricycle	G. G. Clapham	601,946	Apr. 5	640	134	83	120
Bicycle package-carrier	A. L. Brice	605,536	June 14	862	202	83	1589
Bicycle-pedal clip	I. W. Conselyea	602,220	Apr. 12	1116	245	83	225
Bicycle-propelling mechanism	T. B. McDermott	603,261	May 3	64	16	83	618
Bicycle-propelling mechanism	G. D. Adamson	604,891	May 31	2083	497	83	1272
Bicycle propulsion	C. W. Davison	605,054	May 31	2307	759	83	1325
Bicycle protective seal	L. A. Payne	606,023	June 21	1838	421	83	1734
Bicycle pump attachment	W. Metcalf	604,695	May 24	2572	595	83	1165
Bicycle-pump. Automatic	C. E. Nichols	605,073	June 21	1919	441	83	1751
Bicycle railway attachment	F. F. Hawkes	602,134	Apr. 12	938	205	83	189
Bicycle-rest	J. Battersby	602,279	Apr. 12	1202	264	83	242
Bicycle retainer and lock	F. Skinner	605,142	June 7	161	40	83	1381
Bicycle-riders. Pipe-hanger and shield for	F. C. Avery	604,955	May 31	3140	722	83	1294
Bicycle-saddle	H. A. Christy	604,347	May 17	2072	464	83	1051
Bicycle-saddle	W. H. Craig	605,051	May 31	2303	758	83	1324
Bicycle-saddle	W. H. Craig	602,732	Apr. 19	1977	449	83	405
Bicycle-saddle	C. S. Drummond	606,124	June 21	2014	461 / 462	83	1770
Bicycle-saddle	J. A. Hunt	602,839	Apr. 26	2170	492	83	456
Bicycle-saddle	J. A. Hunt	605,673	June 14	1130	262	83	1588
Bicycle-saddle	J. A. Hunt	605,674	June 14	1132	262 / 263	83	1588
Bicycle-saddle	J. A. Hunt	606,146	June 21	2057	471	83	1778
Bicycle-saddle	T. J. Kirkpatrick	605,669	June 14	1159	268	83	1594
Bicycle-saddle	J. W. Morgan	604,068	May 17	1541	346	83	949
Bicycle-saddle	H. A. Rusch	606,081	June 21	1841	424	83	1737
Bicycle-saddle	B. S. Seaman	606,293	June 28	2534	587	83	1890
Bicycle-saddle	J. F. Twist	605,153	June 7	171	43	83	1388
Bicycle-saddle	J. A. Hunt	601,890	Apr. 5	513	106	83	96
Bicycle-saddle clamp	A. E. Peck and C. G. Hawley	603,784	May 10	965	197	83	789
Bicycle-seat	W. H. Thomas	606,314	June 28	2385	552	83	1863
Bicycle-seat	H. A. Porter	603,785	May 10	967	197	83	789
Bicycle-seat attachment	B. S. Seaman	605,518	June 14	836	195	83	1534
Bicycle-seat clamp	W. E. Mayo	604,699	May 24	2711	619	83	1191
Bicycle-seat. Supplemental	J. M. Gleenon	606,455	June 28	2653	610	83	1915
Bicycle-seat support	W. Grady	605,819	June 14	1401	321	83	1636
Bicycle sprocket-wheel	C. F. Burkhardt	603,422	May 3	309	69, 70	83	639
Bicycle-stand	W. H. Howard	605,499	June 7	708	158	83	1459
Bicycle-stand	W. C. McBurney and W. M. Robertson.	602,665	Apr. 19	1870	425	83	384
Bicycle-stand	J. R. Moore	602,415	Apr. 12	1427	323	83	287
Bicycle steering-guide	J. A. Dunning and K. Barrow	606,925	June 28	2754	636	83	1936
Bicycle steering-head. Automatic	A. C. Garcia	605,417	June 7	694	154	83	1486
Bicycle-support	J. S. Crawford	605,573	June 14	982	218	83	1593
Bicycle-support	J. J. Dix	604,946	May 17	1870	419	83	1013
Bicycle-support	H. H. Draper	606,128	June 21	2020	463	83	1771
Bicycle-support	J. F. Furley and E. Forsyth	605,477	June 14	774	178	83	1522
Bicycle-support	H. Geidt	602,318	Apr. 12	1206	280	83	255
Bicycle-support	J. H. Iler	605,433	June 7	712	159	83	1490
Bicycle-support	M. Kelly	603,780	May 10	949	212	83	801
Bicycle-support	W. Metzrath	606,487	June 28	2697	621	83	1924
Bicycle-support	P. Person	606,576	June 28	2869	660	83	1958
Bicycle-support	C. C. Plaisted	602,141	Apr. 12	952	208	83	192
Bicycle-support	H. T. Sackett	602,270	Apr. 12	1180	259	83	237
Bicycle-support	E. A. Trapp	602,669	Apr. 19	1877	426 / 427	83	386
Bicycle-support	E. A. Trapp	602,670	Apr. 19	1879	427	83	386
Bicycle-support	E. A. Trapp	602,784	Apr. 19	2056	466 / 467	83	490
Bicycle-support	G. H. Williams	603,519	May 3	514	112 / 113	83	699
Bicycle-support and lock	W. E. Jones	604,050	May 17	1502	337	83	942
Bicycle tandem attachment	T. V. Cowden	605,699	June 14	1177	271	83	1597
Bicycle toe-clip	D. Basch	602,602	Apr. 19	1915	436	83	308
Bicycle toe-clip	H. W. Calvert	605,390	June 7	696	142	83	1474
Bicycle tool-case	L. H. Knopping	604,998	May 31	3190	734	83	1309
Bicycle tool holder or carrier	J. O. Glase	604,210	May 17	1876	406	83	1001
Bicycle-trainer	G. W. Tarver	602,546	Apr. 19	1650	375	83	343
Bicycle-trainer	H. Vogeler	604,300	May 17	1790	403	83	998
Bicycle-wheel	J Brown	602,562	Apr. 19	1660	377	83	345
Bicycle-wheel	G. Hayes	604,883	May 31	3025	694 / 695	83	1271
Bicycle-wheel	M. C. Oviatt	603,574	May 3	601	134	83	718
Bicycle-wheel belt	W. F. Glidden	605,161	June 7	221	54	83	1393
Bicycles. Axleless sprocket for	J. P. Archdeacon	605,314	June 7	298	66, 67	83	1405
Bicycles, &c. Carrier for	W. M. Tegart	606,362	June 28	2485	577	83	1851
Bicycles. Device for temporarily disabling	C. Trautner	605,951	June 21	1741	400	83	1730
Bicycles, &c. Mechanism for indicating travel of	W. E. Stubbs	601,695	Apr. 5	113	22	83	94
Bicycles, &c. Propelling means for	H. Cavicchi	605,368	June 7	640	143	83	1474
Bicycles, &c. Seat or saddle support for	G. B. Sieverling	602,289	Apr. 12	1368	309	83	276
Billiard-chalk holder	S. C. Whitlow	605,653	June 14	1147	266	83	1591
Billiard-cue	F. Lea	605,258	June 7	374	94	83	1432
Billiard-cue-tip fastener	P. B. Tarver	601,913	Apr. 5	559	115	83	106
Billiard-cue tips. Device for chalking	W. Knoll	602,541	Apr. 19	1642	374	83	341

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Billiard or pool tables. Pneumatic cushion for	W. F. Stebbins	603,490	May 3	460	108	83	669
Billiard-table	A. Hand	605,872	June 21	1536	351	83	1680
Billiard-table frame	J. Dockstader	606,196	June 28	2146	498	83	1815
Bin for powdered material	C. Irish	604,987	May 31	2117	716	83	1269
Binder	J. J. Gilmore	604,743	Apr. 19	1909	452	83	407
Binder	W. F. Grigsby	602,443	Apr. 19	1479	336	83	811
Binder	H. E. Dade	604,561	May 24	2466	561	83	1144
Binder	F. E. Robinson	605,975	June 21	1733	399	83	1719
Binder for leaves	W. M. Russell	605,916	June 21	1617	372	83	1698
Binder for loose sheets	H. E. Veit	606,434	June 28	2618	608	83	1909
Binder for sheet-music, &c	J. R. Barrett	601,994	Apr. 5	707	150	83	132
Binder. Temporary	N. Edson	603,500	May 3	475	106	83	668
Binder. Temporary	L. M. Leslie	603,428	May 3	380	72	83	661
Binder. Temporary	J. E. Woodworth	604,817	May 31	2909	665	83	1248
Binder. Temporary	E. Dürkopf	605,946	June 7	392	.....	83	1418
Bismuth methylene-digallate and making it	J. Schmid	604,571	May 24	2491	.....	83	1149
Bismuth-oxyiodin tannate							
Bit: *See* Mortising-bit.	M. Barber	603,825	May 10	1057	236	83	823
Bit-stock	G. Glasmachers	603,631	May 10	730	160 / 161	83	757
Blackboard	G. J. Schneider and K. F. G. Brenner.	604,422	May 24	2302	494	83	1097
Blackboard	L. A. Peck	602,266	Apr. 12	1174	258	83	237
Blackboard-cleaner	L. W. Weaver	603,962	May 10	1325	304	83	874
Blacking outfit. Pocket shoe-	J. H. Haskins	602,506	Apr. 19	1575	360 / 361	83	330
Blank threading and pointing machine	E. Kelly and H. B. Weaver	602,947	Apr. 26	2362	530	83	404
Blast-furnace	G. Laws	605,727	June 14	1215	261	83	1604
Blasting-tool. Combination	B. D. Rising	60[illegible]66	May 17	1580	353	83	956
Bleaching-boiler. Rotary	G. Wells	602,967	Apr. 26	2308	545	83	500
Blind for arched windows. Collapsible							
Block: *See* Pillow-block. Wood block.	F. Burger	603,206	Apr. 12	1081	237	83	217
Block system. Electric	F. L. Fairbank and T. N. Cantril	603,841	May 10	1001	244	83	828
Blotter-bath and absorbent composition therefor	W. M. Tillman	605,985	June 21	1647	378	83	1708
Blowpipe							
Board: *See* Bulletin-board. Scoop-board. Ironing-board. Washboard. Sand-board. Whist-board.	J. Kautz	603,469	May 3	404	90	83	679

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Bolting-machine	A. Bosanko	605,946	June 21	1674	393	83	1708
Bonding and tying	J. Bennett	606,468	June 14	761	174	83	1519
Book. Account-	J. Eichert	604,581	May 24	2393	543	83	1134
Bookbinding	J. E. Hewett	602,401	Apr. 12	1406	317	83	334
Bookbinding	J. E. Wales	605,364	June 7	590	138	83	1465
Bookbinding-machine	F. P. Hill	604,170	May 17	1731	389 / 390	83	966
Bookbinding-machine	J. McClellan	602,406	May 3	390	88, 89	83	654
Book binding. Blank-	W. B. Boorum	606,116	June 21	2002	459	83	1760
Book. Blank-	T. Elliott	604,562	May 24	2305	544	83	1130
Book cover. Writing-	C. J. Ainsworth	606,160	June 28	2119	487	83	1809
Book-holder	A. L. Platt	602,169	Apr. 12	1015	223	83	204
Book-holder	M. E. Spielman	603,033	May 10	770	171	83	766
Book-holder	H. Whitfield	606,321	June 28	2397	555	83	1935
Book. Manifolding-	J. H. Murphy	602,405	Apr. 12	1411	319	83	334
Book. Manifolding cash-sales	P. N. de Dubocay	602,736	Apr. 19	1965	450	83	406
Book-rest. Revolving	W. H. Northall and F. W. Schepman	603,571	May 3	508	133	83	717
Book. Sales-recording check-	E. M. Anderson	602,817	Apr. 26	2141	496	83	451
Book. Scrap or sample	J. A. Lofstedt	602,164	Apr. 12	1008	221	83	206
Book-support	G. R. Pease	605,253	June 28	2234	513	83	1591
Book. Wall-	C. Balcom	605,663	June 14	1045	240	83	1571
Boot or shoe	W. N. Sprague	603,367	May 3	307	47	83	641
Boot or shoe shank	E. Roos	602,407	Apr. 12	1414	319	83	285
Boot. Wool-	W. Thau	603,749	May 10	912	202	83	794
Boring and shaping machine tool-holder	L. F. C. Rich	605,359	June 7	390	88	83	1426
Boring conical holes. Tool for	I. W. Mason	603,531	May 3	543	119	83	705
Boring tapering holes. Tool for	H. Hill	602,449	Apr. 19	1490	340	83	313
Boring-tool	D. P. Arnillas	603,017	Apr. 26	2472	561	83	514
Bottle	O. V. Blazier	603,019	Apr. 26	2475	562	83	514
Bottle	A. R. Campbell	604,720	May 31	2762	631	83	1230
Bottle	W. A. Fries, Sr	603,527	May 3	535	118	83	703
Bottle	L. K. Larrison	602,338	Apr. 12	1295	287	83	261
Bottle	P. Lindemeyr	603,108	Apr. 26	2631	597 / 598	83	544
Bottle	A. Mazzanovich	604,120	May 17	1641	368	83	968
Bottle	F. L. Meyer	604,062	May 17	1584	345	83	948
Bottle	J. C. Patterson	604,193	May 17	1777	399 / 400 / 401	83	996
Bottle	E. Towers	603,350	May 3	184	42	83	637
Bottle	H. Weil	601,919	Apr. 5	567	117	83	108
Bottle	W. Wilson	601,848	Apr. 5	446	90	83	83
Bottle	J. F. Kries	603,958	May 10	1292	295	83	868
Bottle and cap	A. J. Jose	604,228	May 17	2026	454	83	1043
Bottle and seal. Non-refillable	A. G. Smalley	601,988	Apr. 5	699	148	83	132
Bottle attachment	W. A. Scholey and F. C. Schrader	606,588	June 28	2987	668	83	1961
Bottle-cap	A. Dolifus	602,836	Apr. 26	2166	491	83	456
Bottle-capper and cork-presser	P. Lindemeyr	603,107	Apr. 26	2630	597	83	542
Bottle-capping machine	P. H. McGrath	604,629	May 24	2561	589	83	1167
Bottle-closure	W. M. Fowler	606,005	June 21	1786	409 / 410 / 411	83	1728
Bottle filling and corking machine	H. Staub and C. Duerst. (Reissue)	11,667	May 31	2334	786	83	1330
Bottle-filling apparatus	G. W. McCollom	601,782	Apr. 5	213	49	83	41
Bottle holder. Adjustable nursing-	J. W. Sykes. (Reissue)	11,665	May 17	2089	468	83	1055
Bottle holder. Nursery-	R. A. Lake	602,991	Apr. 26	2433	555	83	506
Bottle holder. Nursing-	M. P. Brennan	604,245	May 17	1869	419	83	1012
Bottle. Mucilage-	T. A. Fick	605,636	June 14	1064	245	83	1575
Bottle. Mucilage-	A. Clement and W. E. Wilkinson	605,161	June 7	188	48	83	1266
Bottle nipple. Nursing-	J. W. Bear	605,843	June 21	1477	357	83	1689
Bottle. Non-refillable	E. C. Bowne	606,507	June 28	3736	689	83	1980
Bottle. Non-refillable	H. C. Fuhlmann	602,156	Apr. 12	996	218	83	201
Bottle. Non-refillable	G. E. and C. F. Henry	605,237	June 7	316	72, 73	83	1411
Bottle. Non-refillable	G. Highfield	603,235	Apr. 26	2546	649	83	595
Bottle. Non-refillable	G. Ipson	602,850	Apr. 26	2191	497	83	461
Bottle. Non-refillable	J. B. Marshall	603,110	Apr. 26	2635	598	83	544
Bottle. Non-refillable	J. McCafferty	606,393	June 28	2344	543	83	1855
Bottle. Non-refillable	J. H. McDonald	604,497	May 24	2353	534	83	1128
Bottle. Non-refillable	A. F. Mott and H. S. Dunn, Jr	603,701	May 10	884	185	83	779
Bottle. Non-refillable	E. Rodier	604,845	May 31	2958	677	83	1257
Bottle. Non-refillable	H. Strawson	606,309	June 28	2377	550	83	1851
Bottle. Non-refillable	J. A. Trimble	606,256	June 28	2283	528	83	1842
Bottle. Non-refillable	W. G. Webster	605,501	June 14	909	224	83	1539
Bottle. Non-refillable	A. N. Woodard	604,104	May 17	1615	362	83	954
Bottle. Non-refillable	G. H. Williams	602,811	Apr. 19	2117	477	83	421
Bottle. Non-refilling	J. H. Hettinger and B. P. Kincaid	603,640	May 10	735	164	83	739
Bottle or jar closure	G. A. Diemer	601,989	May 31	3104	714	83	1329
Bottle or similar vessel	J. J. McCornish	603,114	Apr. 26	2644	600	83	547
Bottle. Safety-	T. W. Ryan	606,795	May 10	997	222	83	811
Bottle. Self-sealing	A. Backhaus	601,608	Apr. 5	130	28	83	26
Bottle-stopper	J. Berneis	603,084	Apr. 26	2499	567	83	519
Bottle-stopper	L. H. Broome	603,724	May 10	871	193	83	787
Bottle-stopper	L. H. Broome	603,725	May 10	873	194	83	787
Bottle-stopper	P. G. Hercht	605,451	June 14	780	179	83	1588
Bottle-stopper	N. Lindbergh	606,290	June 28	2889	541	83	1838
Bottle-stopper	P. Lindemeyr	603,864	May 3	304	46	83	641
Bottle-stopper	E. L. Lloyd	603,908	May 10	1213	275	83	833
Bottle-stopper	G. W. Mason	605,966	June 21	1716	394	83	1716
Bottle-stopper	E. A. Parker	604,259	May 17	1891	433	83	1016
Bottle-stopper	J. F. Perry	605,908	June 21	1589	365	83	1699
Bottle-stopper	W. Walker	604,443	May 24	2243	508	83	1105
Bottle-stopper	L. C. Webster	603,804	May 3	100	24	83	671
Bottle-stoppering device	C. H. and H. B. Fischer	605,179	June 7	216	53	83	1382
Bottle-washer	H. B. and C. H. Fischer	605,180	June 7	218	53	83	1382
Bottle-washer	G. P. Goulding	602,071	Apr. 12	685	161	83	170
Bottle washer	B. W. Norton	603,151	Apr. 26	2706	615	83	860
Bottles. Device for preventing fraudulent filling of							

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Bottles. Device for preventing fraudulent refilling of	M. Rosenberg	604,545	May 24	2439	554	88	1188
Bottles, &c. Means for preventing fraud in connection with contents of	G. H. Grapes	603,044	Apr. 5	788	171	88	149
Bouquet-holder	S. C. Fredson	605,543	June 14	871	204	88	1541

Broom-handle. Flexible	L. Rybold	603,943	Apr. 12	1138	249	88	286
Broom-holder	W. I. Smith	604,909	May 31	3080	707	88	1281
Broom-rack	J. H. Paige	605,908	June 14	1380	316	88	1634
Broom-support	J. T. Burnip	606,184	June 28	2194	497	88	1810
Brush	A. W. Coulter	603,431	Apr. 19	1454	330	88	807
Brush	H. W. Haecy	603,077	Apr. 12	846	184	88	172
Brush	J. Lafaurie and G. Giron-Lanauze	605,794	June 14	1212	280	88	1603
Brush	L. A. Lightenhome	605,330	June 7	323	74	88	1413
Brush	H. E. Miller	605,165	June 7	229	55	88	1394
Brush	C. A. Neuert	603,198	Apr. 12	1058	231	88	813
Brush	R. D. Ake	603,071	Apr. 26	2508	588	88	981
Brush and scoop. Combined	D. F. Gallagher	606,498	June 28	2091	490	88	1698
Brush. Clothes-line	E. M. Hellwig	604,471	May 24	2305	532	88	1115
Brush. Electric	M. Young	606,371	June 28	2408	570	88	1868
Brush-machine gage device	H. Grommann	603,187	Apr. 26	2768	668 / 669 / 670	88	670
Brush-machines. Work-holder for	G. F. Cooper	603,058	Apr. 12	810	175	88	165
Brush. Polishing	W. W. Worcester	605,533	June 14	859	201	88	1536
Brush. Shoe	E. Cassanova	604,795	May 31	2767	633	88	1221
Brushing or combing machine	W. F. Smith	604,438	May 24	2324	496	88	1101
Bucket. Automatic dumping-	J. A. Joyce	603,143	Apr. 26	2697	612	88	899

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Bucket. Well-	W. D. Martin, Sr	603,509	May 3	595	133	88	716
Buckle	G. N. Clark	604,913	May 31	3084	708	88	1288
Buckle	D. E. Hipwell	605,687	June 28	2958	686	88	1974
Buckle	G. E. Lawrence	606,629	June 28	2959	686	88	1974
Buckle	W. A. Mitchell	605,114	June 7	78	23	88	1397
Buckle	W. A. Mitchell	603,974	May 10	1314	301	88	971
Buckle and purse or bag. Combined belt-	A. W. Scheuber	603,576	May 3	608	134	88	718
Buckle and snap-hook. Combined	J. Polka	606,107	June 21	1967	456	88	1766
Buckle. Belt-	E. B. Winter	602,508	Apr. 19	1583	362	88	331
Buckle. Harness-	L. E. Kiehl	602,951	Apr. 26	2270	510	88	496
Buckle. Harness-	J. Mealey	606,518	June 28	2744	633	88	1984
Buckle for trace-carriers. Back-band	M. Dallas	603,807	May 10	1023	228	88	816
Budding-clasp	J. D. Abell	604,983	May 31	3110	715	88	1287
Buffing or polishing device	C. E. Graham	603,357	May 3	198	44	88	639
Buffing-roll. Rotary	P. B. Bagley	602,913	Apr. 26	2296	523	88	450
Buffing-wheel	T. A. Norris	603,963	May 10	1396	306	88	808
Buggy-bow rest	N. McAulay	606,079	June 21	1938	444	88	1755
Buggy-top-bow support	J. A. Paulis	604,706	May 24	2726	623	88	1194
Building-blocks. Child's	C. S. Burton	605,899	June 7	654	146 / 147	88	1477
Bulkhead-doors. Hydraulic mechanism for closing	W. B. Cowles	604,870	May 31	3006	690	88	1267
Bullet-proof fabric	C. Zeglen	603,948	May 3	9	2	88	608
Bulletin-board	W. E. Benson	603,943	May 3	1	1	88	601
Bung. Ale-barrel	F. W. Albrecht	603,464	May 3	308	69	88	678
Bung. Faucet-	D. Beebe	605,779	June 14	1329	304	88	1625
Burglar-alarm	W. U. Cooper	606,519	June 28	2745	634	88	1984
Burglar-alarm	S. B. and M. M. Daniels	605,590	June 14	965	224	88	1558
Burglar-alarm	A. V. Todd	605,344	June 7	556	123	88	1458
Burglar-alarm and lock. Combined	C. R. Sabin	605,555	June 14	895	208 / 209	88	1546
Burial apparatus	C. L. Moore and C. V. Pugh	605,260	June 7	566	130 / 131	88	1463
Burial apparatus	R. H. Thorne	601,833	Apr. 5	390	80	88	71
Burial-casket	O. M. Allen	605,639	June 14	1071	246	88	1577
Burial-casket	S. W. Herrell	603,767	May 10	946	211	88	801
Burial-casket	J. Jaixen and E. Harry	604,334	May 17	2042	457	88	1046
Burial-casket	C. E. Myers						
Burner: *See* Coal-burner, Gas-burner, Hydrocarbon-burner, Incandescent burner, Lamp-burner, Petroleum-burner, Vapor-burner.							
Burner	C. Haffcke	606,136	June 21	2038	466 / 467	88	1774
Burners. Apparatus for conveying air and vapor to	J. Stubbers	603,436	May 3	334	74	88	664
Burning hydrocarbon oils with blue flame. Apparatus for	F. Altmann	603,072	Apr. 26	2568	588	88	532
Bushing and faucet for barrels	W. C. Rawley	605,612	June 14	1012	233	88	1566
Butter, &c. Apparatus for removing	H. Röhl and H. Usedom	604,194	May 17	1647	369	88	969
Butter cake and means for making same	F. Burger and H. M. Williams	602,124	Apr. 12	923	201	88	137
Butter printer and weighing machine	A. C. Dodge	603,042	Apr. 5	785	170	88	148
Button	A. S. Crane	606,277	June 28	2314	536	88	1849
Button	N. D. Ingram	605,392	June 7	450	100	88	1498
Button	I. G. Platt	605,130	June 7	107	27	88	1373
Button	C. W. Stimson	603,517	May 3	510	111	88	690
Button	J. Acron	604,257	May 24	2091	469	88	1075
Button and neckwear-retainer. Collar-	A. Hall	604,998	May 31	3094	694	88	1271
Button-back	W. A. Pendry	601,675	Apr. 5	86	18	88	18
Button-blank-cutting machine	W. H. and G. W. Leiman	606,864	May 10	1120	252	88	624
Button-boring machine	W. S. Bechtold	603,396	May 3	202	58	88	650
Button. Cuff-	C. E. Hardenbrook	602,804	Apr. 19	2106	475	88	429
Button-feeding mechanism	C. L. Appel	604,938	May 31	3135	721	88	1288
Button-grinding machine	A. M. Heath	604,470	May 24	2304	523	88	1115
Buttonhole-casing	M. A. D. Harris	602,446	Apr. 19	1495	339	88	312
Button. Identification-	C. C. Champenois	605,906	June 21	1773	406	88	1735
Button or stud	S. E. Burke	601,943	Apr. 5	636	133	88	119
Button-remover	C. J. Holmgren	602,848	Apr. 26	2169	496	88	460
Buttoner	G. M. Finotti	602,738	Apr. 19	1988	451	88	406
Cabinet	J. W. Place	602,103	Apr. 12	889	193	88	180
Cabinet	H. B. Banes	603,618	May 10	695	155	88	751
Cabinet and duet-stool	V. Christensen	604,200	May 17	1971	441	88	1082
Cabinet-bath	A. Gartner	605,223	June 7	308	71	88	1410
Cabinet. Exhibiting-	G. B. Murray	606,018	June 21	1815	418	88	1733
Cabinet for medicine, &c	R. H. Whitted	601,981	Apr. 5	570	118	88	103
Cabinet. Grocer's	T. W. Boynton	604,454	May 24	2303	508	88	1109
Cabinet. Kitchen-	J. E. Tate	605,667	May 10	778	179	88	766
Cabinet. Kitchen-	C. H. Martin	602,244	Apr. 12	1308	289	88	303
Cabinet. Lace or ribbon	T. F. Adams	606,385	June 28	2407	557 / 558	88	1606
Cabinet. Photograph-	F. A. Cannon	603,991	May 10	1345	308	88	878
Cable-stringer	S. Mattson	602,368	Apr. 12	1169	257	88	585
Caisson air-lock	A. W. Custer	601,987	Apr. 5	510	105	88	96
Cake-beater	P. D. Harton	603,061	Apr. 26	2501	589	88	535
Cake-machine	M. D. Good	606,305	June 28	2171	498	88	1818
Cake-turner	L. Maybaum	605,000	May 31	2207	726	88	1307
Calculating device	G. B. Grant	605,998	June 7	426	98, 99	88	1435
Calculating-machine	G. B. and E. R. Peters	605,909	June 21	1890	365 / 366 / 367	88	1668
Calendar	M. Cowen	601,949	Apr. 5	643	134	88	120
Calendar. Perpetual	O. H. S. Anson	604,649	May 24	2514	598	88	1173
Call-box system	E. E. Salisbury and A. E. Dean	605,345	June 7	557	124	88	1429
Camera focusing attachment	D. E. Sharretts	606,994	June 28	2334	537 / 538	88	1890
Camera. Kinetographic	W. H. Daniels	604,738	May 31	2779	635 / 636	88	1228

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Camera. Kinetographic	W. B. Davis	601,951	Apr. 5	646	135	83	121
Camera. Magazine	J. J. Chase	604,204	May 17	1796	135	83	1000
Camera. Photographic	F. A. Brownell	605,851	June 21	1489	340	83	1673
Camera. Photographic copying	H. Stender	606,593	June 28	2895	341	83	1968
Camera. Photographic copying	H. Stender	606,594	June 28	2895	670	83	1968
Camera stand. Photographic	M. Levy	604,990	May 31	3198	735	83	1804
Can: *See* Key-opening can. Meat-can. Milk-can. Oil-can. Sheet-metal can. Shipping-can.							
Can	E. M. Hallbauer	603,617	May 10	1041	226	83	690
Can	E. Norton	602,467	Apr. 19	1821	346	83	319
Can	F. J. Schleicher	603,775	Apr. 19	2045	462	83	418
Can	R. Steegmüller	602,647	Apr. 19	1827	416 417	83	375
Can-body-forming machines. Horn extension for	F. A. Odin	605,677	June 14	1138	264	83	1599
Can-cleaner	E. E. Harvey	605,425	June 7	708	156	83	1428
Can cover. Milk	H. Schaake	605,180	June 7	284	56, 57	83	1305
Can ending or heading machine	A. Campbell and J. Urie	602,222	Apr. 12	1205	265	83	243
Can-filling apparatus. Oil	F. W. Smith	606,084	June 21	1846	495	83	1736
Can-filling machine	B. W. Morfoot	606,471	June 28	2073	615	83	1919
Can-head. Key-opening	J. G. Staudenmayer	603,489	May 3	459	108	83	669
Can lock. Milk	P. Beavers	604,016	May 17	1447	294	83	998
Can-opener	C. Francisco	604,878	May 31	3017	608	83	1260
Can-opener	G. R. Howell	602,757	Apr. 19	2014	456	83	412
Can-opener	W. S. Kerr	602,455	Apr. 19	1499	349	83	314
Can-opener	J. Gersant and A. G. Buttifant	605,605	June 14	1091	231	83	1563
Can-side-seam-fusing machine	H. C. Hunter	604,594	May 24	2148	482	83	1067
Cans. Combined body-blank and connecting-strip for packing	G. J. Record	604,079	May 17	1567	351	83	954
Cans, &c. Device for closing	E. Norton	602,465	Apr. 19	1516	346	83	318
Cans. Screw-cap sealing-nozzle for	E. Norton	602,606	Apr. 12	978	191	83	178
Canning food	E. Norton	603,871	May 10	1149	256	83	840
Candle-holder	F. J. Bubiltz	601,754	Apr. 5	254	50	83	48
Candle holder and extinguisher	J. W. Kynast	604,314	May 17	2002	449	83	1039
Candy-machine	E. F. Gould	602,253	Apr. 12	1219	203	83	208
Canvas-stretcher	J. W. Nunns	604,737	May 31	2765	627	83	1224
Caponizer	A. M. Duncan	605,346	June 7	561	124	83	1459
Capstan	J. B. Sample	603,170	Apr. 26	2731	621 662	83	564
Car	J. F. Caldwell	602,079	Apr. 12	848	185	83	172
Car	I. J. Hoyt	603,894	May 10	1053	235	83	823
Car and air-brake coupling. Automatic combined	J. B. Thomas	603,823	May 10	1051	235	83	822
Car and air-brake coupling. Combined automatic	J. B. Thomas	602,435	Apr. 19	1460	331 333	83	308
Car and railway system therefor. Mining	J. Dwyer	603,855	May 10	1122	252	83	884
Car appurtenance. Passenger	E. F. Matheny	603,509	May 3	497	109	83	697
Car bicycle-support. Railway	G. L. Kahle	604,555	May 24	2457	559	83	1141
Car-bolster	C. E. Bauer	604,009	May 24	2048	581 582	83	1161
Car-bolster	T. M. Gallagher	604,794	May 31	2875	657	83	1249
Car bolster. Railway	C. T. Schoen	602,910	Apr. 26	2292	522	83	479
Car-bolster. Rolled-steel	J. M. Maris	603,439	May 3	342	76	83	665
Car-brake	A. H. Bostley	606,595	June 28	2879	663	83	1960
Car-brake	J. Ruff	605,581	June 14	867	201	83	1538
Car-brake	J. S. Wickes and J. Ketterly	606,308	June 28	2576	550	83	1861
Car brake-beam. Railway	T. H. Simpson and P. T. Handiges	606,330	June 28	2418	560 561	83	1870
Car-brake. Electrohydrostatic automatic	J. Buchel and F. McGloin	605,485	June 14	766	161	83	1534
Car brake. Trolley	A. H. Klingler	604,451	May 24	2857	507	83	1107
Car-buffer	H. F. Ball	604,442	May 24	2941	508	83	1104
Car-buffer	A. M. Waitt	605,521	June 14	840	196	83	1534
Car buffer equipment. Railway	H. H. Sessions	601,900	Apr. 5	595	110 111	83	101
Car buffer-platform. Railway	T. L. McKeen	605,562	June 14	843	196 197	83	1535
Car center-bearing. Railway	H. H. Sessions	603,117	Apr. 26	2648	601 602	83	548
Car. Cinder	E. E. Slick and T. Morrison	603,804	Apr. 19	1748	398 399	83	360
Car. Convertible street-railway	G. Moore	605,634	June 14	1046	240	83	1571
Car-coupling	J. F. Ball, Jr	603,889	May 10	1158	257	83	846
Car-coupling	J. M. Brown and L. D. Peak	604,227	May 17	1883	411	83	1006
Car-coupling	H. F. Camp	603,176	Apr. 26	2740	624	83	566
Car-coupling	H. M. Cox	605,257	June 7	436	98	83	1435
Car-coupling	J. E. Cunningham	603,039	Apr. 5	795	165	83	145
Car-coupling	J. W. Fawcett	601,643	Apr. 5	31	7	83	8
Car-coupling	G. J. Forrey	605,055	May 31	3300	760	83	1326
Car-coupling	T. M. Gallagher	604,934	May 31	3113	715	83	1288
Car-coupling	P. T. Handiges	604,864	May 31	2997	686	83	1265
Car-coupling	G. B. Johnston	603,063	Apr. 26	2541	577	83	536
Car-coupling	E. E. Joy	604,595	May 24	2512	571	83	1153
Car-coupling	M. A. Knowles	605,795	June 14	1214	281	83	1604
Car-coupling	E. B. Laughter	602,342	Apr. 12	1301	269	83	262
Car-coupling	I. Low	602,605	Apr. 19	1749	399	83	351
Car-coupling	R. H. McCaughey	601,901	Apr. 5	536	111	83	101
Car-coupling	T. L. McKeen	605,742	June 14	1241	287	83	1600
Car-coupling	F. McTaggart	605,737	June 14	1234	285 286	83	1606
Car-coupling	C. E. Moore and J. Doyle	606,340	May 3	169	39	83	684
Car-coupling	J. I. Newburg	603,350	Apr. 12	1280	295 296	83	366
Car-coupling	W. C. Perkins	602,914	Apr. 26	2897	682 684	83	490
Car-coupling	W. C. Perkins						

Alphabetical list of designs, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Car-coupling	F. R. Rapp	603,504	Apr. 26	2766	625	83	574
Car-coupling	G. T. Rohn	606,583	June 28	2875	668	83	1960
Car-coupling	A. Ruscher	606,945	June 28	2954	688	83	1998

Car driving-gear. Motor	H. Loeffler	606,065	June 21	1904	436	83	1749
Car emergency-brake. Street	F. A. Harris, A. M. Cuppies, and M. McCann.	602,183	Apr. 12	987	204	83	189
Car-fender	H. Haywood and G. Totten	601,961	Apr. 5	661	139	83	124
Car-fender	L. J. Hunter	604,925	May 24	2146	483	83	1097
Car-fender	G. C. Hutcheson	605,284	June 7	431	97	83	1434
Car-fender	E. M. Johnson	606,726	May 10	877	194	83	798
Car-fender	J. Keller	601,908	Apr. 5	671	142	83	127
Car-fender	I. Macowsky	603,912	May 10	1218	276	83	878
Car-fender	J. I. Newburg	603,330	May 3	168	39	83	634
Car-fender	G. O. Spencer	604,910	May 31	3061	707	83	1281
Car-fender	R. Harris and M. K. Goldsmith	601,751	Apr. 5	249	49	83	48
Car-fender-lowering mechanism	J. Leightham	604,171	May 17	1785	360 361	83	987
Car fender or guard. Tramway	G. H. Smith	604,944	May 31	3123	716	83	1290
Car fender. Street	J. E. A. Walker	604,097	May 17	1587	359	83	960
Car fender. Street	C. Sauerbrey	606,156	June 21	2068	475 476	83	1761
Car-fenders. Device for attaching	L. B. Perry and J. C. Mitchell	605,205	June 7	276	64	83	1402
Car fifth-wheel. Railway	J. Burns	604,008	May 24	2330	579	83	1158
Car. Funeral	H. W. Brett	604,225	May 17	1881	410	83	1005
Car-gate	F. E. Benton	605,990	June 21	1762	404	83	1734
Car hand-strap	J. A. and L. H. Long	606,066	June 21	1905	439	83	1749
Car-heater	R. M. Dixon	605,563	June 14	913	213 214	83	1550
Car-heating apparatus	W. N. Marks	604,589	May 24	2428	552	83	1136
Car journal-box. Railway	E. J. Preston and A. B. Gill	602,182	Apr. 12	1033	226 227	83	206
Car-lighting systems. Dynamo for electric	J. H. Cooley	604,739	May 31	2773	624	83	1222
Car-line. Elevated electric	T. B. Kirby	605,880	June 21	1546	355	83	1605
Car-lock	A. M. Acklin	605,680	June 14	1040	229	83	1570
Car or like receptacle. Overhead	E. P. McKaig	602,236	Apr. 12	1111	244	83	224
Car pilot. Railway	W. L. Austin	605,305	June 7	474	105 107	83	1442
Car. Railway	H. C. Buhoup	604,718	May 31	2758	620 621	83	1219
Car release-rigging. Railway	A. J. Lodriguss	601,696	Apr. 5	598	100	83	100
Car running-gear. Railway	H. M. Stiles	606,172	June 21	2109	463	83	1787
Car sand-box. Railway	J. S. Johnston	605,050	May 31	2819	761	83	1295
Car-seat	W. M. Norcross	605,194	June 7	96	85	83	1370
Car-seat foot-rest	C. C. Borton	604,196	May 17	1767	398	83	994
Car side bearing. Railway	C. F. Huntoon	606,845	June 28	2445	567	83	1874
Car side bearing. Railway	F. W. Diehl	602,494	Apr. 19	1459	331	83	307
Car signaling device. Railway	A. J. Pitkin	603,254	May 3	90	17, 18	83	614
Car. Steam-propelled	F. W. Burke	605,075	June 7	14	4	83	1256
Car-strap	T. Long	606,236	May 3	163	37, 39	83	532
Car-unloading apparatus	J. Norling and C. E. Johnson	603,115	Apr. 26	2545	601	83	547
Car-ventilator	T. L. McKeen	601,809	Apr. 5	583	110	83	101
Car. Vestibule	F. E. Canda	605,891	June 7	637	142 143	83	1474
Car-wheel	J. Fairfield	605,542	June 14	870	204	83	1541
Car-wheel	J. H. McEwen	605,806	June 21	1573	361	83	1600
Car-wheel	W. W. Rossmässler	606,600	May 3	646	144	83	787
Car-wheel	J. A. Graham and J. W. Kile	601,648	Apr. 5	44	8	83	9
Car wheel and axle	W. T. Snyder	603,921	May 3	79	20	83	617
Car-wheel. Self-lubricating	W. T. Snyder	603,922	May 3	80	21	83	617
Car-wheel. Self-lubricating	W. M. Hoffman	605,056	May 31	3310	760	83	1330
Car-wheels. Abrading-shoe for truing up	F. W. Wohlenberg	603,716	May 10	856	190	83	768
Cars. Combined track and wheel brake for street	E. Wilhelm and W. F. Richards	604,101	May 17	1611	361 362	83	988
Cars. Electric-lighting apparatus for	W. F. Richards	604,083	May 17	1574	358	83	965
Cars. Electric-lighting apparatus for railway	W. F. Richards	604,084	May 17	1576	358 359	83	966
Cars. Electric-lighting apparatus for railway	W. F. Richards	604,085	May 17	1578	359	83	966
Cars. Electric-lighting apparatus for railway	W. F. Richards	604,081	May 17	1570	351	83	955
Cars. Electric-lighting system for railway	W. F. Richards	604,082	May 17	1573	351	83	955
Cars. Electric-lighting system for railway	W. F. Richards	603,777	May 10	961	215	83	808
Cars. Means for carrying velocipedes in railway	F. H. Skrine	604,513	May 24	2360	542	83	1135
Cars. Means for preventing derailment of railway	M. E. Beasley	604,867	May 31	3001	689	83	1266
Cars or coaches. Dust-conveyer for railway passenger	A. H. Le Van	602,821	Apr. 26	2148	467	83	459
Cars. Steam-pipe coupling for railway	C. E. Benson	605,575	June 14	985	218	83	1553
Carbon transmitter	G. W. Goss						

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Carbonating and bottling malt liquids. Apparatus for	C. Saw	601,735	Apr. 5	219	43	83	42
Carbonating and dispensing apparatus. Liquid	P. E. Malmstrom	603,404	May 3	275	61, 62	83	662
Carbonating apparatus. Liquid	O. W. Ackerman	603,031	Apr. 26	2497	566	83	518
Carbonating apparatus. Liquid	C. A. Gaines	602,936	Apr. 26	2349	536	83	491
Carboxylated products of triphenylmethane. Making	H. R. Vidal	603,300	May 3	96	.....	83	619
Carburetor	J. C. and H. J. Fuhr	604,988	May 31	3108	714 715	83	1267
Carburetor	W. E. Pinckney	603,431	May 3	323	73	83	663
Carburetor	A. I. Van Vriesland	604,948	May 31	3129	719 720	83	1291
Carburetor	G. H. Weeks	603,983	May 10	1284	285	83	990
Carburetor spraying device	C. W. Hobbs	604,580	May 24	2406	546	83	1132
Cardboard-scoring machine	A. M. Odgers	605,007	May 31	3525	742	83	1310
Card-mount	H. L. Grims	603,186	Apr. 26	2761	628	83	509
Card. Playing	W. Hopkinson and R. Tyack	605,057	May 31	3511	760	83	1296
Carding-engine doffer-driving mechanism	E. E. Orrell	603,044	Apr. 26	2514	570	83	522
Carding-machine clearer-roll	F. C. Prescott	603,493	May 3	395	73	83	662
Carousel	B. Fuller	603,130	Apr. 12	932	204	83	168
Carpenter's tool	A. F. Gue	601,711	Apr. 5	176	24	83	35
Carpet-cleaner	H. Hardwick	604,390	May 17	3012	451	83	1040
Carpet fabric. Cut-pile	J. H. James	604,757	May 31	2819	644	83	1230
Carpet-fastener	J. S. Jardine	604,565	May 24	3511	570	83	1153
Carpet fastener. Stair	G. F. Murdock	603,348	Apr. 12	1310	298	83	264
Carpet fastener. Stair	G. B. Shepherd	605,978	June 21	1737	309	83	1730
Carpet or rug fastener	C. M. Jansky	604,987	May 31	3168	734	83	1308
Carpet stretcher and tacker	E. B. Browne	601,628	Apr. 5	8	2	83	4
Carpet-sweeper	J. Parbel and J. A. Staven	604,788	May 31	2858	653	83	1236
Carpet-sweeper	F. E. Caldwell	603,005	Apr. 26	2456	559	83	511
Carriage brake. Child's	H. R. Bird	605,243	June 7	341	78, 79	83	1415
Carriage. Motor	G. L. Morgan	606,569	June 28	2833	656	83	1955
Carriage rocker attachment. Baby	R. T. D. Brougham and W. C. Bersey.	604,874	May 31	3013	691	83	1268
Carriage safety device. Electric		605,681	June 7	707	157	83	1489
Carriage-step	W. F. Hopkins	604,866	May 31	3047	690	83	1275
Carriage-washer	E. J. Green and S. C. Brown	603,154	Apr. 26	2710	616	83	560
Carriage-wheel. Elastic	N. Rosenblatt and S. Abscharumoff	602,302	Apr. 12	1243	273	83	240
Carriages. Suspending batteries on	R. T. D. Brougham and W. C. Bersey.						
Carrier: *See* Flower-carrier. Parcel-carrier.	J. Anderson	606,618	June 28	2985	690	83	1970
Carrying apparatus	H. E. H. Borgström	605,998	June 21	1763	404	83	1734
Carrying-frame	H. E. H. Borgström	605,998	June 21	1765	405	83	1734
Carrying-frame	A. Maxwell	602,225	Apr. 12	1110	244	83	223
Cart. Dump	J. W. Taylor	605,089	May 31	3264	749 750	83	1317
Cart. Dumping	G. A. Dahlberg	601,827	Apr. 5	365	61	83	72
Cart. Hand	C. S. Arnold	601,928	Apr. 5	580	120 121	83	110
Cart. Refreshment	F. P. Tucker	601,884	Apr. 5	507	104	83	95
Carton	J., M. Fuller	604,894	May 31	3919	668	83	1250
Cartridge. Blank	G. de Roussy de Sales	603,971	May 10	1311	301	83	971
Cartridge. Carbid	F. W. Oliver	601,908	Apr. 5	536	111	83	101
Cartridge-case and making same	F. Raymond	602,143	Apr. 12	903	210 211	83	194
Cartridge loading and crimping machine	G. M. Peters	605,256	June 7	283	87, 88	83	1424
Cartridge-machine wad-placing mechanism	W. H. Honiss	606,056	June 21	1802	435	83	1747
Cartridge-packet	E. G. Parkhurst	606,081	June 21	1822	430 431	83	1734
Cartridge-packet	J. K. Ross	602,875	Apr. 26	2292	503	83	467
Cartridge-shell	W. B. Place	605,336	June 7	567	118	83	1453
Cartridge-shell-heading machine	W. B. Place	605,340	June 7	567	120 121	83	1455
Cartridge-shell heads. Machine for assembling	W. B. Place	605,339	June 7	566	119 120	83	1454
Cartridge-shell heads. Machine for priming or capping	L. W. Bates	605,842	June 21	1467	336 337	83	1609
Cartridges or shells. Electrically-heated charge for	W. Birks	605,773	June 14	1300	300	83	1620
Carving-machine	A. Wache	602,887	Apr. 26	2943	509 510	83	471
Carving-machine	W. W. and W. H. Wythe	606,224	June 28	2401	556 557	83	1866
Case: *See* Bicycle tool-case. Pencil-case. Bolt-case. Show-case. Egg-case. Spectacle or eyeglass case. Eyeglass-case. Telescopic case. File-case. Ticket-case. Filing-case. Toilet-case. Medicine-case. Peanut-vending case. Type-case.	M. Anderson	605,561	June 14	910	213	83	1540
Cash indicator and recorder	T. Carney	606,188	June 28	2133	490	83	1812
Cash-receiver	A. Franke	603,843	May 10	1002	244 245	83	686
Cash-register	R. A. W. Rosander and J. R. Pearson.	601,681	Apr. 5	108	20	83	22
Cash-register	G. B. Fry	602,741	Apr. 19	1008	451	83	407
Cashier-protector	R. Collen	606,516	June 28	2798	632 633	83	1966
Cask or barrel manufacturing machinery	P. Sherrer	606,395	June 28	2537	595	83	1891
Cask-pitching apparatus	C. Wittkowsky	601,903	Apr. 5	705	150	83	133
Casks or barrels from veneers. Manufacturing	T. H. Linahan	606,465	June 28	2697	614	83	1918
Casket	R. B. Heuchan	602,220	Apr. 12	1108	242	83	222
Caskets, &c. Work-support for	R. L. Dorsey	604,580	May 24	2391	543	83	1130
Caster							

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Caster	J. A. Kennedy-McGregor	606,402	June 28	2661	613 613	83	1917
Caster	M. G. Merritt and F. L. Groff	606,354	June 28	2469	573	83	1878
Caster	D. Nickel	604,866	May 31	3031	696	83	1272
Caster. Ball	G. L. Boveroux	601,736	Apr. 5	199	39	83	39
Caster. Ball	K. A. Kloss	604,400	May 24	2158	495	83	1089
Casting plant	D. Baker	602,514	Apr. 19	1761	402	83	368
Castings. Apparatus for making chilled iron	A. K. Barker	602,714	Apr. 19	1950	443	83	400
Cattle-guard	W. C. Halley	603,075	Apr. 12	843	183 183	83	171
Cell. Automatic alarm	J. Rumpel	602,960	Apr. 26	2883	543	83	498
Cell lock. Prison	G. F. Kindt	603,277	May 3	59	15	83	612
Cellulose and preparing same. Modification of	C. F. Cross, E. J. Bevan, and C. Beadle.	604,206	May 17	1801	.....	83	1000
Cellulose for manufacturing spun fabrics. Apparatus for preparing	C. Kellner	603,333	May 3	158	36	83	632
Cement. Making slag	C. J. Curtin	606,278	June 28	2317	.....	83	1850
Cement. Manufacturing	H. Gallinowsky	605,637	June 14	1068	.....	83	1576
Cement tube and distributing-brush. Combined	A. L. Weis	602,304	Apr. 12	1074	235	83	216
Centering-machine	J. H. Brewer	603,866	May 10	1180	267	83	946
Centrifugal machine	S. A. Baker and M. F. Colby	603,395	May 3	251	58	83	650
Centrifugal machine	M. Davidsen	605,087	June 7	32	10	83	1259
Centrifugal machine	Z. Lubinski and R. Krajewski	604,582	May 31	2934	671	83	1258
Centrifugal machine	O. W. Schaum	605,017	May 31	3242	743	83	1312
Centrifugal machine	A. Pinover	605,743	June 14	1242	287	83	1600
Chain-adjusting device	R. W. Sise	604,429	May 24	2219	496	83	1100
Chain-cleaning attachment	F. Ecaubert	602,653	Apr. 19	1804	411	83	371
Chain connection. Cycle	W. H. Griffith	604,316	May 17	2005	449	83	1089
Chain-link	T. D. Dundas and G. Senior	601,748	Apr. 5	246	48	83	47
Chain. Power-transmitting							
Chair: *See* Adjustable chair. Hammock-chair. Child's chair. Music-chair. Convertible chair. Reclining-chair. Dental chair. Revolving chair. Folding chair.							
Chair	J. G. Armour and C. Southorn	606,112	June 21	1998	457 458	83	1767
Chair	T. J. Dalton	602,574	Apr. 19	1694	385	83	350
Chair	F. H. Karrer	604,136	May 17	1708	383	83	981
Chair	I. E. Palmer	604,212	May 17	1806	407	83	1001
Chair adjusting device	W. H. O'Keefe	605,008	May 31	3226	742	83	1310
Chair and bed. Combined	B. Murtagh	606,498	June 28	2008	622	83	1994
Chair and bedstead. Combined	J. Dixon	606,806	May 10	1198	269 270	83	848
Chair, crib, cradle, bed, and walker. Combined	F. A. Tustison	604,341	May 17	2057	460 461	83	1049
Chair fan attachment. Rocking	R. M. Copenhaver	604,519	May 24	2390	543	83	1129
Chair, washbench, &c. Combination	J. Van Melick	606,614	May 3	688	153	83	734
Chalk-holder	G. P. Roberts	601,779	Apr. 5	306	60	83	58
Chandelier. Extension gas	J. T. Rice	606,751	May 10	969	214	83	808
Charging-buggy	W. B. Woods and L. Henry	606,775	May 10	915	208	83	795
Chart. Dress	I. Williams	601,725	Apr. 5	199	39	83	39
Chatelaine	S. Zeugschmidt	606,284	Apr. 26	2845	649	83	585
Check-hook	F. J. Frost, T. Souers, and C. W. Cooledge.	606,416	May 3	300	67	83	657
Check-protector	L. T. Weiss	604,936	May 31	3101	718	83	1235
Check system. Protective bank	C. L. Beers	602,872	Apr. 26	2918	.....	83	467
Chemical compounds by electrolysis. Producing	J. W. Richards and C. W. Roepper.	605,116	June 7	83	23	83	1366
Chenille-cutting machine	W. McCleary	606,215	Apr. 12	1095	240	83	220
Children. Device for amusing	E. L. Foster	604,045	May 17	1498	335	83	941
Child's chair	F. C. Hannahs	602,451	Apr. 19	1494	311	83	313
Chimney-cap	J. Houle	606,567	June 28	2851	657	83	1955
Chimney-cleaner	A. Messenger	608,881	May 10	1166	268	83	944
Chimney-cowl	O. Kuphal	604,379	May 24	2130	478	83	1093
Chisel-holder	J. J. Flyckt	606,470	June 28	2672	.....	83	1919
Chlorin derivatives of toluene. Making	P. P. Mounet						
Chopper: *See* Cotton-chopper.	B. Wilmsen	605,158	June 7	183	46	83	1385
Christmas-tree ornament	A. J. Johnson	605,166	June 7	194	49	83	1387
Chuck. Lathe	E. H. Bourne	603,101	Apr. 26	2020	505	83	541
Chuck. Rock-drill	J. P. Dunn	603,375	May 3	224	50	83	644
Churn	F. J. Hoge	603,351	May 3	223	58, 59	83	645
Churn	A. M. Lance and F. J. Flocker	603,001	Apr. 26	2007	502	83	536
Churn	J. A. Maddox	604,039	May 17	1537	343	83	946
Churn	J. W. Otto	605,649	June 14	1068	250	83	1580
Churn	W. G. Stone	602,901	Apr. 12	1070	235	83	216
Churn	W. E. Penn and C. S. Brown	604,989	May 17	1908	495 496	83	1019
Churn and butter-worker	J. W. Myers	604,634	May 31	2987	673	83	1233
Chute	R. T. Darrah	606,580	June 28	2747	634	83	1984
Chute and crib. Revolving coal	E. and T. Flory	602,690	Apr. 19	1776	405 406	83	366
Cider. Apparatus for expressing	E. F. Hamburg	605,421	June 7	606	155	83	1467
Cigar-box	W. W. Bahan	603,051	Apr. 26	2534	574	83	1238
Cigar-holder	H. Giddings	605,818	June 14	1400	321	83	1668
Cigar-lighter. Pendent	O. Wartmann	604,445	May 24	2245	504	83	1105
Cigar-machine	T. A. Cole	606,377	June 28	2509	592	83	1869
Cigar-tip cutter	F. E. Helnig	602,639	May 10	733	164	83	730
Cigar-tip protector	N. Du Brul	606,189	June 21	2022	463	83	1773
Cigar-wrapper-cutting machine		605,853	June 21	1497	343 343	83	1674
Cigars or cigarettes. Machine for vending lighted	A. Caude	606,537	June 28	2800	646	83	1944
Cigarette	H. Goldenfarb	603,878	May 10	1150	259	83	940
Cigarette-box	J. E. Bucklin	604,668	May 24	2370	536	83	1165
Cigarette-former	W. S. Mallard	603,714	May 10	853	189	83	762
Cigarette-former. Pocket	J. Veith						

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Cooler: *See* Liquid-cooler. Water-cooler. Pie or cake cooler.	J. Sedlacek	604,168	May 17	1714	286	88	992
Cooling and sealing	H. J. Reynolds	608,229	Apr. 26	2851	650	88	586
Cooling vessel	E. Steiger	604,849	May 31	2964	679 / 680	88	1258
Copies of manuscript. Machine for multiplying	J. M. Moore	602,414	Apr. 12	1495	222	88	287
Copying-press	J. Frydmane	604,977	May 31	3170	730 / 731	88	1299
Copying, registering, checking, and adding apparatus	J. Colquhoun	604,023	May 17	1458	327	88	984
Copper matte. Treating	H. E. Pridmore	604,337	May 17	2050	490	88	1047
Cord-knotting device	J. Jonson	601,869	Apr. 5	516	107	88	97
Cork-cutting machine	C. Noël	605,297	June 7	459	103 / 104	88	1439
Cork-cutting machine	H. Weinz	604,705	May 24	2722	622	88	1198
Cork-extractor	G. S. Foster	602,508	Apr. 19	1573	339	88	329
Cork-protector	C. W. Mackey	601,776	Apr. 5	204	56	88	56
Cork-pulling machine	J. E. Hawkins	603,950	May 10	1278	201	88	805
Corking-machine	A. Dollfus	602,837	Apr. 26	2167	491 / 492	88	456
Corn-binder bundle-carrier	J. W. Pridmore and E. A. Johnston	605,579	June 28	2871	661	88	1958
Corn-cutter	W. Rowland	604,793	May 31	2874	656 / 657	88	1242
Corn-header	C. E. Ecklund	605,685	June 14	1068	244 / 245	88	1575
Corn-header	W. A. Wilson	603,934	May 10	1256	295	88	861
Corn header. Kafir-	J. B., J. B., and L. F. Tilley	601,764	Apr. 5	373	54	88	53
Corn-husker	J. M. Carlisle	601,944	Apr. 5	636	133	88	120
Corn-husker	G. S. Gundersen	604,528	May 24	2403	547	88	1128
Corn-husker. Adjustable	W. F. Lillie	604,479	May 24	2312	525	88	1117
Corn-husking machine	G. S. Gundersen	605,944	May 10	1097	246	88	829
Corn-husking machine	G. S. Gundersen	603,845	May 10	1098	246	88	829
Corn masher and cutter	J. Ebersole	605,704	June 14	1184	273	88	1596
Corn or seed dropper	G. R. Dykes	604,738	May 31	2786	638	88	1234
Corn-popping apparatus	R. O. Stutsman	605,617	June 14	1081	235	88	1567
Corn-sheller	F. B. Tait	605,984	June 21	1646	378	88	1708
Corn-shock compressor	H. Van Pelt	603,582	May 3	610	136	88	719
Cornish boiler	H. Thomassen and J. Krop	605,149	June 7	169	42	88	1393
Corset	J. A. Garneau	603,843	May 10	1085	245	88	829
Corset	M. C. Mayer	606,169	June 21	2048	469	88	1786
Corset	L. S. Walker	601,722	Apr. 5	194	38	88	36
Corset-retainer and stocking-supporter. Combined	N. M. Lennon	606,064	June 21	1904	438	88	1749
Corset-shield	M. L. Perrottet	605,209	June 7	464	104	88	1440
Corset-steel	M. E. McCloskey-Playter	601,734	Apr. 5	218	43	88	42
Cot. Folding	C. F. Moore	606,355	June 28	2470	573	88	1878
Cotton-chopper	F. McCullough	603,903	May 10	1297	296	88	809
Cotton chopper and cultivator	J. J. Holland	605,426	June 7	708	157	88	1488
Cotton-collecting apparatus	C. J. Luce	603,697	May 10	881	184	88	778
Cotton elevator, cleaner, and feeder	J. W. Seifert	604,426	May 24	2213	495	88	1100
Cotton fabrics. Apparatus for applying finishing substances to	C. H. Jacob	605,434	June 7	713	159 / 160	88	1490
Cotton-handling machine. Pneumatic	J. T. Fuller	604,087	May 17	1477	331	88	937
Cotton-opener	J. O'Connell	602,265	Apr. 12	1173	258	88	286
Cotton-picking machine	A. A. Hamerschlag and T. H. Price	602,076	Apr 12	844	183 / 184	88	171
Cotton-press	W. E. Anderson	604,012	May 17	1433	321 / 322	88	929
Cotton-press	F. L. Dyer	603,784	May 10	974	217	88	806
Cotton-press	F. L. Dyer	604,028	May 17	1464	326	88	985
Cotton-press	F. L. Dyer	604,029	May 17	1467	329	88	986
Cotton-press	R. J. Gatling	603,271	May 3	50	13	88	610
Cotton-thinner	J. Geddes	606,183	June 21	2084	466	88	1774
Couch. Convertible	J. B. Gardiner	605,095	June 7	50	16	88	1393
Couch-seat	J. F. McNutt	601,879	Apr. 5	500	108	88	94
Counter	D. L. Chandler	603,375	June 28	2501	561 / 562	88	1684
Counter-cutting machine	C. Dumaw, Jr	605,407	June. 7	675	150	88	1488
Countersinker							
Coupling: *See* Air and steam brake coupling. Bicycle-coupling. Car-coupling. Car and air-brake coupling. Hammock-support coupling. Hose-coupling. Insulated pipe-coupling. Pipe-coupling. Thill-coupling. Tire-coupling. Tube-coupling. Vehicle-coupling. Whiffletree-coupling.	F. Rhind	604,790	May 31	2871	656	88	1241
Coupling	J. Muhr	605,223	June 7	508	112	88	1448
Coupling-closure	U. G. Detwiler	603,880	May 10	1066	243	88	827
Coupling-releasing mechanism	W. Gribben and H. W. Smith	604,040	May 17	1461	328	88	986
Cover for crocks, &c	W. Jeschke	602,452	Apr. 19	1495	341	88	314
Cover or binder for magazines, &c	C. A. Eidsmoe	606,481	June 28	2060	480	88	1622
Cows from kicking. Device for preventing	C. F. Nilson	604,496	May 24	2354	534	88	1132
Cradle and child's carriage. Combined motor	J. Allred	603,008	Apr. 26	2458	558	88	510
Cradle or similar rocker. Rocking	W. H. Morgan	602,765	Apr. 19	2023	459	88	413
Crane. Overhead traveling	T. H. Hoyt and J. Gillet	603,608	May 10	881	181	88	777
Crank-arms to crank-shafts. Means for attaching	C. H. Metz and T. Curley	604,919	May 31	3001	710	88	1253
Crank-pedal	G. H. Owens	604,076	May 17	1561	349 / 350	88	993
Crate	G. H. Grove	601,650	Apr. 5	46	9	88	10
Crate. Collapsible	M. F. Peterfish	603,697	Apr. 19	1790	408	88	866
Crate. Collapsible egg-	W. O. Parker	603,357	Apr 12	1388	305	88	267
Crate. Collapsible shipping	M. C. Ryan	603,409	Apr. 12	1417	320	88	285
Crate-corner							

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Coat. Hunting-	W. S. Carter	605,077	June 7	16	5	88	1356
Coat-support	J. T. Stevens	606,477	June 28	2022	618	88	1921
Cock	A. Schleidt and W. Pehl	605,018	May 31	2843	745	88	1312
Cock. Automatic shut-off ball-	T. W. Ryan	603,080	Apr. 26	2495	565	88	516
Cock. Ball-	H. A. Sedgwick	603,846	May 3	178	41	88	696
Cock. Blow-off	W. McIntosh	603,043	Apr. 26	2510	570	88	521
Cock box. Stop-	J. C. Lobdell and A. Talcott	604,623	May 24	2568	585	88	1164
Cock. Gas-	A. W. Tuckerman	603,902	Apr. 12	1071	235	88	216
Cock or faucet	J. F. Cotter and J. Tager	601,624	Apr. 5	18	4	88	6
Cock. Rotary-plug	W. F. Harrison	601,623	Apr. 5	50	10	88	11
Cock safety attachment. Gas-	J. F. Smith	604,197	May 17	1765	402	88	997
Cock safety cut-off. Gas-	P. C. Folwell	603,383	Apr. 26	2643	648	88	595
Cock. Stop and waste	J. H. Glauber	606,585	June 28	2797	645	88	1944
Coffee-pot	H. L. Mitchell	603,700	May 10	833	184	88	779
Coffee-roaster	G. Burs	603,551	May 3	569	125 / 126	88	711
Coffee-roaster	W. J. and R. L. Davis	603,535	Apr. 19	1664	378	88	345
Coffee-roaster	W. R. Ramsey	603,923	May 10	1238	281	88	856
Coffee-roaster	J. Donahue	603,986	Apr. 19	1391	312	88	280
Coffin	L. L. Pletcher	604,786	May 31	2902	654	88	1239
Coffin-fastener	C. N. Smith	604,848	May 31	2902	679	88	1258
Coffin-lid fastener	C. P. Mayer and J. H. Pomeroy	604,407	May 24	2176	488	88	1002
Coin-controlled-apparatus guard	J. G. W. Romans and A. D. Grover	603,741	May 10	896	199	88	791
Coin-controlled machines. Fraud-preventing device for	H. A. Manley	603,792	May 10	991	221 / 222	88	810
Coin-controlled mechanism	J. Herbert	603,104	Apr. 26	2625	596	88	542
Coin-controlled meter	E. J. Brandt	604,600	May 24	2531	577 / 578	88	1157
Coin-delivery apparatus	E. von Haken	605,008	June 21	1900	414	88	1730
Coin-freed automatic machine	J. Green	604,215	May 17	2004	449	88	1039
Coin-holder	J. Mason	603,111	Apr. 26	2636	599	88	545
Coin-operated device	J. D. Kneedler	605,463	June 28	2092	613	88	1917
Coin-operated mechanism	H. H. Kinsey	602,990	Apr. 12	1224	270	88	246
Collapsible box					637 / 638 / 639		
Collar-blanks, &c. Machine for forming and folding	A. D. Fenwick	606,528	June 28	2759	640 / 641 / 642 / 643	88	1937
Collar folding and shaping machine	A. Farina	602,007	Apr. 12	827	180	88	166
Comb: *See* Warper-comb.	A. Long and R. Foster	606,564	June 28	2845	655 / 656	88	1953
Combs. Apparatus for drawing off in circle	J. Denby	604,856	May 31	2964	693 / 694	88	1269
Combing-machine stop mechanism	I. H. Cleveland	605,271	June 7	410	98	88	1430
Combination-lock	C. F. Hill	605,787	June 14	1841	306 / 307	88	1627
Combination-lock	J. Reuterberg	605,514	June 14	831	198	88	1533
Combination-lock	L. C. Thompson	602,114	Apr. 12	908	197 / 198	88	184
Combination-lock	E. F. Dyer	604,141	May 17	1674	376 / 377	88	974
Comminuted materials. Apparatus for handling	W. B. Stull	604,220	May 17	1824	409	88	1004
Commutator-brush holder	W. H. Jordan	603,051	Apr. 26	2539	577	88	526
Commutators of dynamos or motors. Device for turning off	W. Friese-Greene	602,429	Apr. 19	1469	334 / 335 / 336	88	909
Composing characters and producing photographic negatives therefrom. Means for	W. S. Scudder	605,141	June 7	136	34 / 35 / 36 / 37 / 38 / 39	88	1377
Composing-machine. Monoline	G. A. Goodson	605,957	June 21	1708	390 / 391	88	1713
Composing-machines. Differential letter-space register for	D. C. Ball	602,150	Apr. 12	979	214 / 215	88	196
Compresses. Bagging attachment for roller	C. S. Forbes	604,823	May 31	2918	666	88	1250
Condenser	S. Bergmann	603,230	Apr. 26	2595	647	88	594
Conduit lining. Interior-	W. E. Cowan	603,623	May 10	703	157	88	753
Conduit-wiring machine	J. S. Crowell	601,986	Apr. 5	509	105	88	96
Confectioner's molding-machine	G. Fuchs	604,527	May 24	2400	546	88	1131
Contribution-boxes. Device for collecting contents of	T. von Zweigbergk	605,304	June 7	473	106	88	1441
Controller	H. H. Paine	604,941	May 31	3120	717	88	1290
Convertible chair	A. M. Acklin	605,621	June 14	1041	230	88	1570
Conveyer	T. A. Edison	602,004	Apr. 12	822	178	88	167
Conveyer	H. F. Hodges	604,226	May 31	2927	660	88	1268
Conveyer	W. F. Hunt	604,284	May 17	1842	413	88	1008
Conveyer. Endless-chain	F. B. Knight	602,085	Apr. 12	854	186	88	174
Conveying apparatus	A. S. Krotz	603,607	May 3	609	149 / 150	88	731
Conveying apparatus	T. S. Miller	601,756	Apr. 5	256	50, 51	88	49
Conveying apparatus	A. S. Krotz	603,606	May 3	661	147 / 148 / 149	88	730
Conveying system. Electric	H. A. Wolff	602,546	May 3	561	124	88	709
Cooker. Dry vacuum-	J. F. Bussells	604,346	May 17	2073	404	88	1052
Cooking and pressing apparatus	G. D. Fox	602,317	Apr. 19	1365	279	88	255
Cooking apparatus	A. F. Humphrey	605,552	June 28	2884	650	88	1949
Cooking utensil							

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Cigarette-machine	J. O. Eaton	602,426	Apr. 19	1463	333	83	908
Cigarette-machine. Pocket	T. S. Fitch	604,908	May 17	1808	406	83	1000
Cigarette-making machine	J. H. Schmidt	603,486	May 3	445	99, 100, 101, 102	83	687
Cigarette-wrapper	C. H. Mehner	604,257	May 17	1689	-----	83	1016
Cinders and smoke. Device for carrying off	A. P. Miller	602,865	Apr. 26	2209	500	83	405
Circuit-breaker. Electromagnetic	G. S. Dunn	601,871	Apr. 5	485	100	83	90
Circuit-breaker. Magnetic	D. M. Moore	604,682	May 24	2669	611, 612	83	1184
Circuit-breaker. Magnetic	D. M. Moore	604,683	May 24	2671	613	83	1184
Circuit-closer	W. D. Kennedy	604,157	May 17	1704	384	83	981
Circuit-closer. Thermal	L. Emdin and J. A. Dewson	606,004	June 21	1785	409	83	1726
Circuit-interrupter	D. M. Moore	604,682	May 24	2662	614	83	1185
Circuit-interrupting mechanism	D. M. Moore	604,687	May 24	2681	613	83	1185
Cistern-cleaner	W. E. Conway and E. A. Murray	606,161	June 21	2080	479	83	1783
Cithern	C. T. Menze	603,699	May 10	882	184	83	779
Cithern. Violin or mandolin	A. Wasciniski	605,764	June 14	1276	295	83	1616
Clamp: *See* Ball-and-socket clamp. Belt-clamp. Bench-clamp. Bicycle-saddle clamp. Bicycle-seat clamp. Cloth-clamp. Fence-clamp. Fence-machine clamp. Frame-clamp. Heddle-bar locking-clamp. Plow-handle clamp. Plumber's clamp. Rail-clamp. Saw-clamp. Sewing machine presser-clamp. Telescopic clamp.							
Clamping device	R. H. White	602,149	Apr. 12	978	214	83	196
Clasp: *See* Budding-clasp. Garment-clasp. Suspender-clasp.							
Clasp	J. L. Carney	605,219	June 7	305	70	83	1409
Clasp	J. Forsheim	603,401	May 3	271	60	83	652
Clasp	J. H. Pilkington	606,088	June 21	1943	446	83	1755
Cleaner: *See* Barrel-cleaner. Beer-pipe cleaner. Blackboard-cleaner. Boiler-flue cleaner. Boiler-tube cleaner. Can-cleaner. Carpet-cleaner. Cistern-cleaner. Cuspidor-cleaner. Dish-cleaner. Cloth. Apparatus for detecting wrinkles in	T. Rowe	601,780	Apr. 5	307	60	83	58
Cloth-clamp for textile machinery	R. P. Winsor	604,108	May 17	1614	362	83	904
Cloth-cutting apparatus	J. Jackson and G. C. Boroughs	603,851	May 10	1110	250	83	822
Cloth-folding machine	E. Hall	604,749	May 31	2807	641	83	1226
Cloth-superposing machine	H. E. Couzineau	604,605	May 24	2543	580	83	1159
Clothes-drier	C. Drake	603,132	Apr. 26	2077	607	83	554
Clothes-drier	P. Jodoin	606,000	June 21	1896	437	83	1748
Clothes-drier	D. M. Moore	604,685	May 24	2681	613	83	1185
Clothes-drier	W. E. Shields	604,428	May 24	2218	496	83	1100
Clothes-drier	E. A. Williston	606,401	June 28	2550	590, 591	83	1608
Clothes-hanger	E. J. Deragon	605,633	June 14	1059	244	83	1574
Clothes-hanger. Window	R. B. Fordham	603,316	Apr. 12	1264	279	83	255
Clothes-line	P. Sinnott	606,363	June 28	2480	576	83	1680
Clothes-line holder	W. Koch	605,607	June 14	1004	231	83	1564
Clothes-line pulley	H. Ecker	603,043	Apr. 5	767	171	83	149
Clothes-line support	J. S. Green	603,633	May 10	723	163	83	757
Clothes-pin	D. Wilson	602,970	Apr. 26	2093	547	83	500
Clothes pin or clamp	L. B. Reeds	605,207	June 7	7279	64	83	1403
Clothes-pin. Wire	S. E. Favell	605,950	June 21	1960	386	83	1709
Clothes rack or drier	U. P. Tarbox	604,457	May 24	2234	501	83	1103
Clothes-tongs	E. B. Stevenson	602,484	Apr. 19	1547	351	83	394
Clutch. Friction	T. H. Worrall and A. Lesperance	606,634	June 28	2906	650	83	1976
Clutch-gear	E. Thunderbolt	603,568	Apr. 19	1655	368	83	340
Coal burner. Pulverized	G. W. Prescott	606,390	June 28	2846	519, 520	83	1838
Coat-hook. Locking	J. C. Backus	603,996	Apr. 12	1238	271	83	946

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Crate. Folding bicycle	M. E. Dunbar	603,443	May 3	347	78	83	668
Crate. Folding egg	J. A. Haskett	605,140	June 21	2048	469	83	1776
Crate. Folding egg	D. Reid	603,473	Apr. 19	1530	348	83	321
Crate or case. Shipping	E. A. Wolfe and P. E. Hart	601,695	Apr. 5	127	25	83	27
Crate. Shipping	R. L. Templeman	603,266	May 3	244	55	83	647
Cream from milk. Apparatus for separating	C. L. and F. G. Lee	605,226	June 7	373	84	83	1432
Crochet or lace holder	W. O. Hill	606,215	June 28	2186	508	83	1988
Cross-tie. Metallic	W. F. Penner	606,577	June 28	2908	660	83	1988
Crusher	A. Jordan	604,702	May 31	2686	646	83	1232
Crushing-mill. Portable	H. L. Jesson	603,221	Apr. 12	1103	242	83	223
Crushing-roll	A. Peasant	605,234	June 28	2895	513	83	1881
Cuff	C. A. Chidsey	604,877	May 31	3016	662	83	1299
Cultivator	P. E. Little	604,998	May 31	3198	736	83	1305
Cultivator	D. B. Miles	604,773	May 31	2844	650	83	1235
Cultivator	D. M. Motherwell	601,718	Apr. 5	178	35	83	35
Cultivator	D. M. Motherwell	1866	Apr. 19	1866	434	83	398
Cultivator	D. M. Motherwell	602,668	Apr. 19	1736	391	83	966
Cultivator	N. O. Starks	604,173	May 17	2049	464	83	419
Cultivator	N. O. Starks	602,779	Apr. 19	1660	372, 373	83	972
Cultivator	J. A. Webber	604,180	May 17	1660	373	83	46
Cultivator and harrow. Combined	G. K. Brenner	601,743	Apr. 5	238	47	83	563
Cultivator. Disk	J. B. Whitaker	603,167	Apr. 26	2726	620	83	814
Cultivator fertilizer-distributer and planter attachment	A. Fiscus	603,808	May 10	1012	226	83	
Cultivator. Garden	M. C. Dethlefs	602,285	Apr. 12	1214	267	83	244
Cultivator or plow. Hillside	G. G. Gilbertson	606,001	June 21	1777	407, 408	83	1726
Cultivator pulverizing attachment	G. T. Croberger	604,313	May 17	2000	448	83	1089
Cultivator-shovel	J. D. Schofield	604,905	May 17	1900	405	83	1000
Cultivator-tooth seat. Adjustable	P. W. Corcoran	605,140	June 7	124	24	83	1377
Cultivator weed-cutter attachment	J. R. Holmes	602,430	Apr. 19	1464	329	83	307
Cup-lubricator	G. P. Gross	602,160	Apr. 12	1002	220	83	208
Curb and culvert-cover. Sidewalk	J. H. Paige	603,561	May 3	584	130	83	714
Curling or crimping iron support	T. W. Varley	605,807	June 14	1379	316	83	1634
Current-indicator	C. P. Steinmetz	606,269	June 28	2486	578	83	1682
Current induction-motor. Alternating	C. P. Steinmetz	602,920	Apr. 26	2207	526	83	488
Current induction-motor. Alternating	C. P. Feldmann	602,921	Apr. 26	2311	526	83	488
Current meter. Alternate	T. McCormick	602,557	Apr. 19	1668	379	83	346
Curtain and window-shade holder. Combination	J. B. Bullis	602,091	Apr. 12	966	189	83	176
Curtain-fixture	A. C. Fischer	605,442	June 28	2630	605	83	1911
Curtain-fixture	H. L. Green	604,656	May 24	2024	600	83	1175
Curtain-fixture	A. S. Lord	604,881	May 31	3023	664	83	1270
Curtain-fixture	W. J. Walters and W. W. Rohrer	606,466	June 28	2669	615	83	1918
Curtain-fixture	J. Heselwood	603,615	May 3	666	154	83	734
Curtain-folding machine	E. F. Wilkinson	606,341	June 28	2440	565, 566	83	1873
Curtain-holder	A. M. Christiansen	605,086	May 31	2876	753	83	1319
Curtain-pole	A. F. Henderson	603,033	Apr. 26	2226	574	83	594
Curtain-pole	J. Boland	601,832	Apr. 5	304	58	83	74
Curtain-pole bracket	J. E. Miller	603,870	May 10	1146	268	83	820
Curtain-pole ring	J. Jones	605,967	June 21	1719	391	83	1716
Curtain-rod bracket	A. Caesar	606,158	June 21	2064	474	83	1770
Curtain-roller fixture	R. Hoffheins	603,355	May 3	22	6	83	604
Curtain-stretcher	M. R. Lare and J. S. Young	603,690	May 10	816	190	83	776
Curtain-stretcher	H. T. Pycroft	602,459	Apr. 19	1508	344	83	316
Curtain-tassel attachment		603,540	May 3	554	129	83	707
Cushion: *See* Pneumatic cushion.							
Cushion-cleaning machine	G. N. Dow and H. Stern	603,826	May 10	1071	239	83	594
Cuspidor	H. C. McRae	603,199	Apr. 26	2780	634	83	578
Cuspidor-cleaner	J. F. Nolan	605,006	May 31	3223	742	83	1309
Cut-off. Cistern	J. McCoy	603,338	May 3	167	36, 39	83	634
Cut-off machine	F. Challoner	603,498	May 3	471	105	83	691
Cut-out. Automatic resetting fusible	J. D. Holmes and W. L. Heath	604,616	May 24	2550	584	83	1163
Cut-out. Time-limit	H. H. Cutler	603,504	May 3	634	141, 142	83	795
Cutter: *See* Band-cutter. Cigar-tip cutter. Corn-cutter. Feed-cutter. Meat or vegetable cutter. Milling-cutter. Paper-cutter. Pipe-cutter. Pipe or tube cutter. Potato-cutter. Root or sod cutter. Threshing-machine hand-cutter. Tobacco-cutter. Tube-cutter.							
Cutter	I. Micke	605,733	June 14	1223	263	83	1605
Cutter-bar	G. E. Frye	604,311	May 17	1997	448	83	1087
Cutter, connector, and pliers. Combination	C. P. Toward	603,349	May 3	183	42	83	111
Cutter-head	G. R. Boyd	601,993	Apr. 5	585	122	83	572
Cutter-head	S. J. Shimer	603,976	May 10	1316	308	83	1194
Cutter-head	H. M. Wilcox	604,707	May 24	2725	623	83	1094
Cutting apparatus	A. Palm	604,413	May 24	2187	490	83	127
Cutting-blocks. Manufacturing	F. E. Lang	601,580	Apr. 5	673	-----	83	90
Cutting-machine	D. Brooks	601,893	Apr. 5	488	99	83	97
Cutting-machine	J. H. Taylor	601,719	Apr. 5	188	36, 37	83	1526
Cutting-tool	F. E. Merriman	605,592	June 14	951	221	83	1595
Cyanids. Making	H. S. Blackmore	605,694	June 14	1168	-----	83	1666
Cycle	J. A. Wronski	606,388	June 28	2400	556	83	1573
Cycle. Circle	E. I. Brannan	605,699	June 14	1093	249	83	1138
Cycle-frames. Means for making	F. A. Ellis	604,490	May 24	2344	538	83	
Cycle hand driving-gear	W. Taylor	605,559	June 14	906	211, 212	83	1548
Cycle handle-bar	D. Gardner and E. B. Hartley	601,798	Apr. 5	827	66	83	62
Cycle handle-bar	F. S. Guy	604,981	May 31	3161	733	83	1301
Cycle handle-bar	J. F. Sargeant	603,543	May 3	556	129	83	708
Cycle handle-bar	H. G. Shepard	605,758	June 14	1357	290	83	1612

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Cycle-handle-bar fastening attachment	E. H. Chappius	604,876	May 31	3014	608	88	1266
Cycle-pedal	W. A. Lloyd and H. Keeling	604,351	May 17	1878	431	88	1014
Cycle-saddle	J. B. Brooks	608,160	June 21	2079	478 / 479	88	1768
Cycle-saddle	W. Clifford	608,943	May 10	1999	393	88	892
Cycle-saddle	T. J. Kirkpatrick	608,769	May 10	987	321	88	809
Cycle-saddle	A. T. Woodward	604,674	May 24	2653	609	88	1163
Cycle umbrella-holder	W. J. R. Watson	606,160	Apr. 26	2717	618	88	560
Cycle-wheel	W. C. Humphrey	604,677	May 24	2669	610	88	1163
Cyclist's brace and back-support	P. W. Deacon and A. Timpe	605,306	June 7	478	107	88	1443
Cyclist's pouch	H. S. Brodie	602,068	Apr. 12	808	174	88	169
Cyclist's riding-record	D. H. Hanlon	608,948	May 10	1976	390	88	895
Cyclone-vault	C. S. Hood	602,450	Apr. 19	1491	340 / 341	88	813
Damper-controller and automatic indicator	J. J. Oyaas	608,644	Apr. 19	1694	416	88	875
Damper handle. Stove-	B. A. Bullock	601,996	Apr. 5	711	151	88	134
Dehorner	I. M. Schellinger	604,989	May 17	1586	355	88	968
Demijohn	W. R. Evans	606,198	June 28	2151	498	88	1616
Dental base-plate	C. A. Davis and E. L. Townsend	605,408	June 7	668	148	88	1481
Dental bridgework	M. C. Merker	605,255	June 7	376	85, 86	88	1429
Dental chair	F. Ritter	605,974	June 21	1798	397 / 398	88	1718
Dental chair	F. G. McCollum	603,280	May 3	64	16	88	613
Dental-chair cuspidor	J. E. Keefe	604,355	May 17	2033	467	88	1054
Dental disk-mandrel	A. J. McDonald	604,896	May 31	2940	672	88	1254
Dental engine	A. J. McDonald	604,837	May 31	2942	672 / 673	88	1254
Dental engine	J. J Coachman	608,524	May 3	598	116 / 117	88	702
Dental-engine controller. Electric	L. L. White	603,808	May 10	1014	226	88	615
Dental impression material	J. W. Ivory	606,460	June 28	2650	612	88	1916
Dental matrix-retainer	C. Harnden	606,456	June 28	2653	610	88	1915
Dental mouth-mirror	J. H. Gartrell	605,223	June 7	310	71	88	1410
Dental-plate-swaging apparatus	F. S. Avil	605,171	June 7	308	61	88	1399
Dental plugger	L. P. J. V. Kjoer	602,084	Apr. 12	853	186	88	173
Dentist's arm-support	E. L. Chaffin	601,708	Apr. 5	186	37	88	99
Denture, Artificial	J. Bragg	604,615	May 24	2362	------	88	1138
Deodorizing and purifying petroleum-oil	W. H. Baker	603,162	Apr. 26	2720	618	88	562
Desk	J. B. Burfoot	605,908	June 7	407	92	88	1429
Desk and seat. Combined school	W. H. Carrier	606,514	June 28	2736	626	88	1932
Desk attachment	J. M. Schunck and A. L. Zender	606,090	June 21	1957	450	88	1760
Desk. Movable-top writing-	E. Hughes	604,008	May 10	1426	319	88	866
Desk or table attachment for furniture	A. H. Kennedy	601,876	Apr. 5	495	102	88	98
Desk. School-	H. Heine	602,296	Apr. 12	1378	282 / 283	88	256
Desk. Writing-	L. H. Stern and T. W. G. Cook	605,198	June 7	242	58	88	1397
Diamond grinding and polishing machine	A. Roesch	602,106	Apr. 12	806	195	88	182
Diaphragm-chamber	A. J. Welander	602,672	Apr. 19	1868	428	88	826
Dice-box	F. H. Hathorn	603,687	May 10	730	168	88	756
Die for rolled forgings	W. H. Sweitzer	603,980	May 10	1850	364	88	880
Die-stock							
Digger:							
See Potato-digger.							
Digging machine. Beet-	L. Pike	601,904	Apr. 5	542	112	88	102
Digging or cultivating implement. Land	T. A. and S. C. Darby	605,096	June 7	80	9, 10	88	1368
Dilator. Vaginal	A. F. Holland	605,547	June 14	880	206	88	1543
Dining-table. Self-leveling marine	J. H. Laskey	604,831	May 31	2933	671	88	1253
Direct-acting engine	A. Ball	603,358	May 3	194	44	88	630
Dirt roller and pulverizer. Combined	L. Chambers	605,160	June 7	187	47	88	1366
Dish-cleaner	R. R. Parry and E. Evans	604,634	May 24	2568	590 / 591	88	1168
Dish-cleaner	A. Ricketts	608,153	Apr. 26	2709	616	88	560
Dish-cleaner	E. Shaw	608,580	May 3	606	135	88	719
Dish-cleaner	I. D. Smead	605,929	June 21	1657	376	88	1702
Dish-drainer	M. L. Perrottet	605,326	June 7	324	117	88	1468
Disinfecting apparatus	J. Evetts	604,562	May 24	2470	561	88	1145
Disinfecting apparatus	F. Gizzi	606,326	June 28	2436	564	88	1872
Disinfecting apparatus	F. J. Mitchell	608,012	Apr. 26	2465	560	88	812
Disinfecting apparatus	J. Thomson	608,876	Apr. 12	1358	304	88	274
Disks. Mechanism for controlling action of oscillating	G. W. Frohlich	605,948	June 7	355	81	88	1418
Display-box	A. M. Hance	604,190	May 17	1772	399	88	995
Display-box	W. H. Wickers	604,221	May 17	1686	400	88	1005
Display cabinet. Card-	H. T. Smith	605,351	June 7	509	125	88	1466
Display-card	E. T. Palmenberg	605,678	June 14	1140	265	88	1590

Electric brake	E. W. G. C. Hoffmann	606,167	June 21	2094	481	68	1735
Electric cable	N. G. Warth	603,009	Apr. 26	2569	582	68	530
Electric-circuit shunt	O. B. Shallenberger	606,171	June 21	2100	482	68	1736
Electric circuits. Solenoid blow-out for dispersing arcs formed in breaking	S. H. Short	601,717	Apr. 5	184	36	68	57
Electric condenser	C. S. Bradley	603,722	May 10	866	198	68	735
Electric conductors. Underground conduit for	C. H. Sewall	603,745	May 10	904	201	68	726
Electric contact-shoe	W. M. Brown	603,495	Apr. 19	1560	355	68	327
Electric controller	M. W. Hanks	606,009	June 21	1801	414	68	1730
Electric cord-adjusting device	F. N. Lawton	603,235	Apr. 12	1121	415	68	285
Electric current controller	J. J. Hogan	603,012	June 21	1805	246	68	1731
Electric current distribution	E. Thomson	602,963	Apr. 26	2367	416	68	498
Electric currents and voltage. Apparatus for reducing	A. F. Vetter	603,709	Apr. 19	1943	544	68	936
Electric drill. Portable	E. Holmes	606,549	June 28	2220	441	68	1946
Electric elevator	H. Cochrane	605,598	June 14	990	649	68	1560
Electric furnace	G. G. Clark	603,515	Apr. 19	2125	282	68	428
Electric heater	E. E. Gold	604,364	May 24	2184	490	68	1064
Electric-lighting apparatus	D. M. Moore	604,695	May 24	2276	479	68	1165
Electric-lighting systems. Interrupter for	D. M. Moore	604,691	May 24	2266	611	68	1164
Electric luminous alphabet and board for same	D. M. Moore	603,263	Apr. 26	2373	612	68	496
Electric machine. Dynamo-	R. S. Dobbie	606,497	June 28	2260	841	68	1805
Electric meter	T. Duncan	604,459	May 24	2275	588	68	1111
Electric meter	T. Duncan	604,460	May 24	2280	510	68	1111
Electric meter	T. Duncan	604,461	May 24	2283	511	68	1112
Electric meter	T. Duncan	604,462	May 24	2285	512	68	1112
Electric meter	T. Duncan	604,463	May 24	2287	513	68	1112
Electric meter	T. Duncan	604,464	May 24	2290	514	68	1113
Electric meter	T. Duncan	604,465	May 24	2293	515	68	1113
Electric meter	T. Duncan	604,466	May 24	2295	516	68	1114
Electric meter	T. Duncan	605,665	June 14	1116	517	68	1555
Electric meter	T. Duncan	605,869	June 21	1510	518	68	1677
Electric meter	T. Duncan	605,949	June 21	1676	519	68	1709
Electric-metering system	H. C. Wirt	603,235	Apr. 26	2284	520	68	496
Electric motor	F. E. Briner	605,880	June 21	1495	521	68	1677
Electric motor	J. G. Truman	606,605	June 28	2016	522	68	1906
Electric motor. Alternating-current	R. H. Hasseler	606,056	June 21	1866	523	68	1746

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Electric-motor-controlling apparatus	A. J. Stopher	603,781	Apr. 19	2068	465	68	419
Electric-motor controlling mechanism	G. Gibbs, W. S. Johnson, and H. Winkenwerder.	605,953	June 21	1699	467	68	1711
Electric-motor mounting	E. B. W. Reichel and F. W. V. Stein.	605,679	June 14	1142	205	68	1560
Electric motor or dynamo	A. L. Riker	604,842	May 31	2052	675	68	1256
Electric-motor switch	F. E. Herdman	603,849	May 10	1103	676	68	880
Electric motors. Automatic device for removing resistance in starting	G. H. Whittingham	602,413	Apr. 12	1423	247	68	286
Electric selector system	T. C. Drake	605,209	June 7	479	248	68	1442
Electric switch	C. C. Badeau	605,057	June 7	1	108	68	1253
Electric switch	A. G. McPherson	602,767	Apr. 19	2025	1	68	414
Electric switch for use with electrically-propelled vehicles or locomotives, &c.	A. T. Snell and C. E. Grove	605,033	May 31	2052	460	68	1315
Electric transformer	J. J. Bellman and C. T. Rittenhouse.	605,194	June 7	946	747	68	1307
Electric transformer	L. Gutmann	603,218	Apr. 12	1100	56	68	221
Electrical apparatus	H. H. Eldred	603,596	Apr. 19	1736	242	68	356
Electrical apparatus	W. Stanley	603,515	May 3	506	305	68	699
Electrical apparatus for schools	M. E. Crowell	603,875	May 10	1155	110	68	841
Electrical communication. System for	A. T. Brown	606,030	June 28	2080	111	68	1971
Electrical distribution and regulation. System of	B. G. Lamme	606,015	June 21	1610	260	68	1728
Electrical-distribution system	C. F. Scott and B. G. Lamme	606,589	June 28	2033	261	68	1961
Electrical-distribution system	C. P. Steinmetz	605,595	June 14	847	661	68	1536
Electrical-distribution system	C. P. Steinmetz	605,596	June 14	848	662	68	1536
Electrical lighting device for kerosene or other burners.	S. M. Meyer	604,696	May 24	2274	199	68	1165
Electrical retort	H. Eldridge, D. J. Clark, and S. Blum.	603,058	Apr. 26	2032	567	68	525
Electrical selector	L. W. Crofoot and F. E. Granger	603,605	Apr. 26	2352	576	68	479
Electrically-controlled switch	E. M. Hewlett	603,786	May 10	979	518	68	807
Electricity. Apparatus for supplying or measuring currents of	W. D. Watson and T. Humphreys	605,765	June 14	1278	205	68	1616
Electrode for arc-lights	C. S. Dolley	606,127	June 21	2080	206	68	1771
Electrodepositing. Process of and apparatus for	E. L. Denecile	603,212	Apr. 12	1089	207	68	219
Electromagnet having rotating fields	W. Langdon-Davies	604,055	May 17	1511	220	68	944
Electromotive force. Regulation of rotary-transformer direct-current	B. G. Lamme	606,560	June 28	2087	640	68	1953
Electroplating apparatus	L. Potthoff	603,226	May 3	73	658	68	615
Electrostatic generating-machine	A. H. Hoyt	603,041	Apr. 26	2508	19	68	530
Electrotherapeutic apparatus	G. G. Duke	603,515	May 10	1086	509	68	819
Elevating mechanism	O. C. Beatty	605,467	June 14	759	281	68	1519
Elevating, transporting, and discharging material. Apparatus for	O. Johnson	603,852	May 10	1111	174	68	833
Elevator:					350		
See Cotton-elevator. Grain-elevator.					351		
Drum-wind elevator. Hydraulic elevator.							
Pneumatic elevator.							
Electric elevator. Water-elevator.							
Elevator	W. Cline	605,854	June 21	1498	343	68	1674
Elevator	A. L. Plush and G. H. Noblit	605,910	June 21	1597	344	68	1695
Elevator	R. C. Smith	601,909	Apr. 5	553	367	68	105
Elevator	F. E. Turner	605,987	June 21	1651	114	68	1704
Elevator	A. Sundt	603,665	May 10	772	379	68	767
Elevator control apparatus	F. S. Braid	605,471	June 14	765	171	68	1590
Elevator-controller	H. R. Smith	604,128	May 17	1653	175	68	970
Elevator-doors. Electrical apparatus for operating	F. T. Ellithorpe	606,003	June 21	1782	371	68	1727
Elevator-doors. Means for operating	C. I. Hall	605,044	May 31	2200	406	68	1222
Elevator-operating apparatus	F. T. Ellithorpe	602,437	Apr. 19	1466	409	68	309
Elevator safety appliance	D. W. Knight	603,644	May 10	742	753	68	761
Elevator safety attachment	G. Hancock	604,347	May 17	1572	165	68	1012
Elevator safety-brake	G. Hancock	605,820	June 14	1401	490	68	1636
Elevator safety-brake	J. and R. W. Hurrell	602,944	Apr. 26	2357	321	68	498
Elevator safety-check	H. Baum	604,537	May 24	2459	538	68	498
Elevator safety device	F. M. Bell	604,360	May 24	2095	559	68	1142
Elevator safety device	F. M. Bell	604,361	May 24	2101	560	68	1076
Elevator safety device	W. E. Bennett	604,957	May 31	2142	469	68	1077
Elevator safety device	R. Paroselli	606,489	June 28	2700	470	68	1994
Elevator safety device	A. L. Plush and G. H. Noblit	605,911	June 21	1599	471	68	1994
Elevator safety device	T. W. Heermans	602,660	Apr. 19	1656	472	68	1695
Elevator stop mechanism. Automatic	F. E. Herdman	602,448	Apr. 19	1466	722	68	369
Elevators. Automatic stop for hydraulic	C. N. Leonard	602,560	Apr. 19	1671	733	68	1994
Embossing-machine	H. Hill	603,953	May 10	1268	239	68	312
Embroidering-machine work-feeding mechanism	H. Hill	604,755	May 31	2816	240	68	346
Embroidering-machine Jacquard mechanism	T. D. Eisner	604,741	May 31	2798	360	68	806
Embroidering-machines. Fabric-holding device for	J. J. Niederer	605,903	June 21	1578	305	68	1220
Embroidering-machines. Fabric-holding frame for	T. D. Eisner	604,742	May 31	2798	306	68	1225
Embroidery-frame	C. E. Roberts	602,103	Apr. 12	895	330	68	1091
Emery-wheel-dressing tool	A. P. Otto	605,903	June 21	1579	194	68	161
Enameling. Method of and apparatus for	W. H. Jump	602,853	Apr. 26	2194	308	68	1091
End-gate	S. D. Metcalfe	602,138	Apr. 12	943	498	68	461
End-gate					205	68	190

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
End-gate fastening	J. S. Court	608,894	May 10	1190	209	88	847
Endoscopic instrument	T. S. Pitt	605,669	June 14	1095	228	88	1561

Extractor: *See* Cork-extractor. Oil-extractor. Spike-extractor. Staple-extractor. Stump-extractor.							
Eyeglass-case	C. E. White	608,095	Apr. 5	756	169	88	148
Eyeglass nose-guard	G. W. Wells	604,448	May 24	2253	506	88	1106
Eyeglasses	E. F. Braddock	604,998	May 31	3104	712	88	1268
Eyelet	E. Kempshall	606,061	June 21	1899	437	88	1748
Eyelet	G. B. Miller	605,802	June 21	1566	360	88	1660
Eyelet-hole-finishing device	J. B. Moran	604,589	May 24	2516	572	88	1154
Eyeleting-machine	S. Field	608,023	Apr. 26	9480	563	88	515
Eyeleting-machine	S. Field	605,574	June 14	933	216	88	1553
Fabric: *See* Bullet-proof fabric. Knit fabric. Knit pile fabric. Plush fabric. Waterproof fabric. Woven fabric.							
Fabric	O. A. Moses	605,567	June 14	923	216	88	1551
Fabric-turning machine. Tubular-	R. Barrie	604,519	May 24	2570	541	88	1128
Fabrics. Apparatus for applying liquids to textile.	F. Girard	606,454	June 28	2661	610	88	1915
Fabrics or permeable materials with nitrocellulose compounds and product produced thereby. Coating	F. G. Annison	602,797	Apr. 19	2091	.....	88	426
Face and neck protector	J. Weil	608,206	May 3	104	25	88	621
Fare indicating and registering apparatus for cabs, &c.	F. W. G. Bruhn	605,442	June 7	794	168	88	1492
Fare-receipt slip	F. S. Borton and C. F. Bates	608,896	May 10	1050	236	88	823

Farm-gate	E. N. Parker	604,542	May 24	2433	553	88	1137
Fastener	W. S. Richardson	604,657	May 24	2602	598	88	1169
Fastener	A. Currier	601,998	Apr. 5	716	151	88	135
Fastening device	W. T. Messinger	604,408	May 24	2179	493	88	1089
Fastening device	S. Patchett	605,510	June 14	985	192	88	1529
Fastening device	C. W. Brackett	602,300	Apr. 12	1289	272	88	249
Faucet	F. F. Field	608,808	Apr. 19	1739	395	88	325
Faucet	E. U. Scoville	608,744	May 10	908	201	88	732
Faucet	J. F. Dredge and J. Doyle	608,465	May 3	399	89	88	676
Faucet and pipe-cleaner. Liquid-distributing	J. Easker	605,540	June 14	808	203 204	88	1541
Faucet. Automatic	H. E. Knottnerus	605,550	June 28	2685	653	88	1951
Faucet. Automatic gaging-	E. Boening	608,984	May 10	1288	304	88	874
Faucet. Beer-measuring	G. A. Soderlund	601,718	Apr. 5	167	36	88	37
Faucet. Hot and cold water	E. Boening	608,983	May 10	1286	304	88	874
Faucet. Measuring-	J. C. Perry	605,025	June 21	1531	422	88	1735
Faucet. Water-	A. Mattijetz	602,345	Apr. 12	1304	200 201	88	263
Feed-cutter	C. F. Search	604,127	May 17	1651	371	88	979
Feed-cutter	A. B. Willoughby	601,668	Apr. 5	123	24	88	24
Feed for boilers. Water-	W. G. Pearson	608,587	May 3	550	121	88	706
Feed-mixer	J. King	604,038	May 17	1505	330 331	88	943
Feed-water and circulation. Heating-	C. J. Jackson	604,249	May 17	1874	420	88	1013
Feed-water heater	L. Dery	606,195	June 28	2145	498	88	1814
Feed-water regulator	A. E. Macoun and J. Noey	608,650	May 10	750	166	88	708
Feed-water regulator. Automatic electric	H. W. French	608,163	June 21	2084	479 480	88	1784
Felt. Apparatus for forming hair	H. H. Brandes	605,849	June 21	1464	340	88	1672
Fence	F. Childers	605,393	June 7	641	143	88	1475
Fence	I. N. Feltenberger	606,527	June 28	2758	637	88	1997
Fence	T. B. Ferguson, Jr.	608,698	May 10	713	160	88	755
Fence	A. Flesher and J. L. Crisler	606,580	June 28	2790	644	88	1342
Fence	D. D. Frisble	605,094	June 7	49	15, 16	88	1792
Fence	T. R. Greene	608,901	May 10	1203	271	88	859
Fence	G. B. Greer	608,917	Apr. 12	1099	241	88	291
Fence	J. W. Holler	608,374	May 3	53	14	88	611
Fence	E. B. Willix	605,570	June 14	986	217	88	1538
Fence	F. Johnson	606,461	June 28	2800	612	88	1917
Fence clamp. Wire-	S. C. Bowen	606,506	June 28	2735	626	88	1960
Fence compensator. Wire-	A. L. Kitselman	606,490	June 28	2698	598	88	1905
Fence-machine	E. C. Mathews	604,999	May 31	2805	788	88	1306
Fence-machine clamp	R. Carter	606,120	June 21	2006	460	88	1770
Fence machine. Wire-	O. A. Morrow	608,917	May 10	1287	278 279	88	855
Fence machine. Wire-	A. E. Roberts	604,905	May 31	3065	705	88	1276
Fence-making machine	A. E. Roberts	604,906	May 31	3066	705	88	1276
Fence-making machine	W. J. Brock	608,988	May 10	1382	307	88	675
Fence. Portable-	W. Bowman	608,186	Apr. 26	2729	619	88	586
Fence-post	G. A. Dieckmann	604,488	May 24	2373	510	88	1110
Fence-post	W. H. Frame	602,740	Apr. 19	1960	451	88	407
Fence-post	C. Gros and J. F. Thomas	608,744	Apr. 19	1996	456	88	408
Fence-post	L. E. Ketchum	606,559	June 28	2684	653	88	1951
Fence-post	W. H. Kimball	608,807	Apr. 19	2130	476	88	420
Fence-post	J. H. Pierson	608,454	May 3	399	88	88	679
Fence-post	J. H. Sparks	606,355	June 7	972	196	88	1461
Fence-post	C. Baxter	606,189	June 28	2132	487	88	1809
Fence spacer. Wire-	G. H. Miller	608,773	May 10	995	214	88	802
Fence spacer-bar. Wire-	L. S. Mohler	604,085	May 17	1887	346	88	943
Fence-stay	C. R. Morrow	608,961	May 10	1205	295	88	883
Fence-stay	W. E. Boyer	601,698	Apr. 5	126	31	88	29
Fence-stay	C. Baxter and A. Schrader	606,205	June 28	2208	532	88	1847
Fence-stay-weaving device	W. C. Barrick	608,819	Apr. 26	2143	498	88	461
Fence stay. Wire-	M. Neil and F. H. Bissell	601,671	Apr. 5	68	17	88	17
Fence stay. Wire-	C. E. Wintrode	608,804	May 10	1015	227	88	615
Fence-stay-wire lock	C. K. Wolf	604,647	May 24	2619	597	88	1173
Fence stays. Machine for crimping wire-	W. Neeb	608,070	June 21	1914	440	88	1751
Fence strands. Implement for stretching wire-	S. C. Bowen	606,505	June 28	2734	628	88	1960
Fence-tightener. Wire-	L. J. Gilmour	604,746	May 31	2800	640	88	1997
Fence-tightening tool. Wire-	J. A. Beamiederfer	608,982	Apr. 26	2340	534	88	490
Fence tool. Wire-	H. W. Denison	604,972	May 31	3164	726	88	1326
Fence tool. Wire-	W. H. Warner	604,090	May 17	1601	360	88	961
Fence-weaving machine. Wire-	D. W. Bromley	608,166	Apr. 26	2726	620	88	568
Fence. Wire-	P. F. Clarkin	605,595	June 14	975	225	88	1560
Fence. Wire-	J. F. Heffley	608,444	Apr. 19	1451	326	88	311
Fence. Wire-	M. Neil and F. H. Bissell	608,697	Apr. 26	2911	501	88	495
Fence. Wire-	P. J. Schild	601,695	Apr. 5	608	148	88	121
Fence. Wire-	H. Withey	601,864	Apr. 5	475	98	88	89
Fences. Device for applying stay-wires to wire-	J. R. Jones	604,398	May 24	2155	494	88	1088
Fences. Metal fabric for wire-	J. W. Griswold and A. G. Goldthwait	604,041	May 17	1488	332 334	88	938
Fencing. Machine for making wire-	J. R. Smith	605,332	June 7	500	126	88	1461
Fencing tool. Wire-	A. L. Kitselman	606,421	June 28	2697	668	88	1904
Fencing. Woven-wire

Fireproof floor and ceiling	G. Liebau	608,506	May 3	644	144	88	736
Fireproof mask	P. Dallinger	606,379	June 28	2511	582	88	1886
Fireproof partition or other wall and ceiling	T. Bailey	608,591	May 3	631	{ 140 / 141	88	784
Fireproof partitions. Skeleton structure for	P. Kühne	606,348	June 28	2449	567	88	1875
Fireproof plastering-support	A. Kühn	606,367	June 28	2524	585	88	1886
Fire-resisting frame and door	A. De Man	608,443	May 3	345	77	88	666
Fire-resisting wooden stairs	A. De Man	608,130	Apr. 26	2074	{ 606 / 607	88	554
Fish-hook-holding device	J. H. Snyder	605,758	June 14	1266	292	88	1614
Fish-trap	F. L. Albury	605,894	June 21	1451	333	88	1667
Fish upon wires in regular rows. Apparatus for securing	E. Andersen	608,083	Apr. 26	2498	506	88	518
Fishing-reel	E. Moore	608,595	Apr. 19	1714	390	88	854
Flash-light apparatus	A. E. Johnstone	608,338	May 3	155	36	88	632
Flash-light machine. Aerial	E. C. Brown	605,573	June 14	981	218	88	1532
Flash-light-powder apparatus	A. Hemsley	606,340	June 28	2439	565	88	1873
Floor and ceiling plate	L. H. Snyder and W. G. Christian	605,084	May 31	3255	748	88	1815
Flower-bed border	E. F. Johnson	606,151	June 21	2068	478	88	1779
Flower-carrier	C. H. Leedy	608,649	May 10	749	166	88	703
Flower-crimping machine. Artificial	L. Ebert	605,409	June 7	680	{ 150 / 151	88	1488
Flour. Treating wheat in manufacturing	A. F. Oesterreich	601,777	Apr. 5	295	55, 59	88	56
Flue-cleaner. Steam	J. T. Thompson	604,551	May 24	2452	557	88	1140
Flue-scraper	R. L. Lukens and G. H. Zschech	604,058	May 17	1585	343	88	946
Flue-stopper	J. M. Padgett	605,128	June 7	104	27	88	1371
Fluid-battery. Invertible	P. R. Cunningham and C. H. Howland-Sherman.	608,616	Apr. 19	1765	{ 403 / 404	88	364
Fluid-distributing system and apparatus	A. Kitson	602,228	Apr. 12	1107	243	88	228
Fluid meter and motor	J. H. Dixon	602,311	Apr. 12	1255	277	88	253
Fluid-meter. Prepayment	H. Green	606,625	June 28	2951	{ 683 / 684 / 685	88	1973
Fluid-pressure motor	P. Schlachter	606,204	June 28	2208	{ 546 / 547	88	1858
Fluid-pressure regulator	R. Matchett	601,878	Apr. 5	496	103	88	98
Fluid-pressure regulator	J. Williams and J. R. Rees	601,923	Apr. 5	573	110	88	109
Fluid-pressure systems. Means for testing	G. S. Hodgins	602,009	Apr. 5	730	156	88	136
Flush joint for tubular-frame constructions	F. C. Avery	608,944	May 3	9	1	88	601
Flushing apparatus	H. Haynes	605,712	June 14	1196	276	88	1601
Flushing-cistern	E. H. Parkinson	605,973	June 21	1725	390	88	1717
Flushing-tank	E. M. Stirling	604,178	May 17	1754	395	88	991
Fly-catcher	C. A. Kimbel	602,083	Apr. 12	853	195	88	173
Fly-paper. Sticky	H. Thum	608,981	May 10	1294	{ 303 / 304	88	874
Fly-screen	S. C. Hart	608,595	May 3	686	143	88	725
Fly-screen	J. G. Zook	603,717	May 10	958	191	88	784
Fly-trap	T. Clement	602,126	Apr. 12	925	208	88	187
Fly-trap	W. Engelbrecht	601,963	Apr. 5	250	135	88	128
Fly-trap	J. C. Nixon	608,065	Apr. 26	2547	579	88	595
Flying-machine	F. A. Jone	605,579	June 14	940	{ 219 / 220	88	1534
Fodder-bundler	H. J. Kester	606,287	June 28	2336	541	88	1853
Fodder-compressor	J. B. Carter	605,220	June 7	306	70	88	1409
Foil-removing apparatus	G. A. Mueller	606,154	June 21	2066	475	88	1780
Folding and cutting mechanism	E. P. Sheldon	604,847	May 31	2959	{ 677 / 678 / 679	88	1858
Folding box	M. B. Claff	604,298	May 17	1694	{ 411 / 611	88	1006
Folding box	A. O. Hubbard	606,450	June 28	2656	{ 612 / 613	88	1916
Folding box	E. E. Pratt	602,586	Apr. 19	1716	391	88	365
Folding chair	C. C. Tombs	605,108	June 21	1976	454	88	1764
Folding rack	J. H. Sloane	602,481	Apr. 19	1541	350	88	292
Food. Apparatus for treating or sterilizing canned	F. W. Smith	604,642	May 24	2008	{ 594 / 595	88	1171
Food compound and making same	W. Gebhardt	606,694	June 28	2949	.....	88	1973
Food. Preparing liquid	W. Sellman	605,190	June 7	238	.....	88	1366
Food product and making same	A. Bernstein	608,165	Apr. 26	2724	.....	88	568
Foot-ball	B. Arnold	608,204	Apr. 12	1231	271	88	247
Foot-gear. Electrical	J. Gallegos	603,185	Apr. 26	2685	609	88	555
Foot-rest	E. J. Smith	603,155	Apr. 26	2711	616	88	560
Foot scraper and wiper. Combined	I. Kinney	605,552	June 14	880	207	88	1545
Forceps	C. K. Judd	602,946	Apr. 26	2351	530	88	494
Forging solid-metal car-wheels. Die for	S. H. Ralston	602,196	Apr. 12	1061	{ 232 / 233	88	213
Fork: *See* Double or compound fork.	O. I. Affelder	605,372	June 7	609	{ 135 / 136	88	1468
Formaldehyde-generator	A. Classen	602,697	Apr. 19	1922	.....	88	394
Formaldehyde starch and making same	J. A. Miller	608,451	May 3	650	81, 88	88	669
Fortification							
Fountain: *See* Aerated-water fountain.							
Fountain	B. Ott	608,342	May 3	172	40	88	635
Frame: *See* Carrying-frame. Drying-frame. Display-frame. Embroidery-frame.							
Frame-brace and stake-socket. Combined	L. Stowe	601,912	Apr. 5	558	115	88	108
Frame clamp and support	F. Reissmann	604,160	May 17	1709	365	88	988
Frogless switch	M. Riley	606,096	June 21	1952	449	88	1750
Fruit, flowers, &c. Cutter and holder for	W. W. Crockett	605,400	June 7	665	147	88	1480
Fruit-gatherer	L. E. Lane	606,092	June 21	1900	437	88	1748
Fruit or other jar	H. H. Bokelmann	603,080	Apr. 26	2476	588	88	514

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Fruit-picker	R. A. Anderson	602,551	Apr. 19	1659	377	88	344
Fruit-picker	M. J. Drysdale and H. Raburn	606,594	June 28	2753	636	88	1936
Fruit-picker	L. S. Hagan	605,419	June 7	696	155	88	1457
Fruit-picker	O. W. Hudgins and J. A. Jones	605,461	June 7	733	172	88	1497
Fruit-picker	P. Munde	602,918	May 10	1230	279	88	955
Fruit-picker	A. H. Bales	605,367	June 7	405	91	88	1499
Fruit-press	G. Pettit, Jr	603,089	Apr. 26	2494	565	88	517
Fruit. Stemming and cleaning	G. Griffiths	603,857	May 10	1125	258	88	985
Frying-pan and lifter	E. Perroté	604,317	May 17	2006	------	88	1040
Fuel and making same. Composite	H. L. Day	603,076	Apr. 26	2574	594	88	598
Fuel-feeder	H. L. Day	603,077	Apr. 26	2576	594 / 595	88	598
Fuel-feeder	H. W. Rappleye	601,677	Apr. 5	94	19	88	90
Fumes or gases. Method of and apparatus for condensing	J. T. Commoss	606,446	June 28	2695	606	88	1912
Fumigator							
Furnace: *See* Assay-furnace. Blast-furnace. Boiler-furnace. Electric furnace. Heating-furnace. Hot-air furnace. Metallurgical furnace. Ore-roasting furnace. Plumber's furnace. Smelting-furnace. Smoke-consuming furnace.							
Furnace	R. Gaul	603,372	May 3	51	12	88	610
Furnace	F. B. McCullough and E. M. Parrott	603,464	Apr. 19	1515	345	88	317
Furnace	G. L. K. Morrow	603,643	Apr. 19	1880	415 / 416	88	374
Furnace	A. Pillatt	605,206	June 7	278	64	88	1403
Furnace	A. J. Pulver	601,985	Apr. 5	608	147	88	181
Furnace	R. L. Short	605,758	June 14	1259	290 / 291	88	1612
Furnace	E. E. Starr	603,373	Apr. 12	1350	301 / 309 / 672	88	272
Furnace	W. Stubblebine	606,600	June 28	2907	673	88	1954
Furnace	F. E. Swift	606,354	June 28	2261	527	88	1842
Furnace	C. W. Trotter	605,240	June 7	336	78	88	1415
Furnace	O. W. Degen	603,556	May 3	577	127 / 128	88	712
Furnace and liquid-fuel burner	J. A. Farrell and W. Douglas	603,181	Apr. 26	2746	635	88	567
Furnace-blast apparatus	G. R. Steward	604,096	May 17	1593	358	88	950
Furnace-door	F. L. Horspool	605,576	June 14	987	219	88	1554
Furnace door. Steam-boiler	A. H. and F. J. Lindberg	603,470	May 3	405	91	88	979
Furnace for heating rivets or for similar uses	R. Schneider	605,802	June 14	1269	314	88	1632
Furnace for working zinc and lead	J. M. Hartman	603,380	May 3	152	35, 36	88	681
Furnace iron-notch and appliance. Blast-	J. Scott	601,750	Apr. 5	264	59	88	51
Furnace-walls. Means for protecting	R. Goll	604,365	May 24	2136	480	88	1094
Furnaces. Device for admitting air to	J. P. Eck	605,090	June 7	42	13, 14	88	1361
Furnaces. Electrical apparatus for charging	J. Reagan	605,797	June 14	1861	419	88	1631
Furnaces. Indestructible block for boiler-	G. A. Bobrick	605,806	June 7	476	107	88	1442
Furniture. Adjustable	W. Wicke	601,868	Apr. 5	473	95, 96	88	88
Furniture. Adjustable	H. B. Hiteshew and W. F. Spieth	601,875	Apr. 5	493	101 / 102	88	90
Furniture. Adjustable school	S. Linthicum, Jr	605,963	June 21	1712	393	88	1715
Furrower, marker, and coverer. Combined							
Gage: *See* Axle-gage. Finger-gage. Knife-gage. Saw-table gage.							
Gage for liquid in vessels	R. S. Foltz and C. A. Phillips	602,069	Apr. 12	893	180	88	169
Gage-glass mounting	A. Ville	604,441	May 24	2240	508	88	1104
Gage-knife	G. M. Landers	602,758	Apr. 19	2015	457	88	413
Galvanic battery	W. Rowbotham	602,362	Apr. 12	1335	297 / 298	88	269
Game apparatus	C. B. Aske	604,650	May 24	2615	598	88	1173
Game apparatus	T. Birch	601,700	Apr. 5	183	36	88	36
Game apparatus	C. L. Klauder	605,729	June 14	1218	280	88	1603
Game apparatus	H. T. Pycroft	603,539	May 3	552	121	88	707
Game apparatus	T. Renwick	602,187	Apr. 12	1050	239	88	211
Game apparatus	E. L. Williams	601,863	Apr. 5	474	96	88	88
Game apparatus. Coin-controlled	C. M. Linley	605,494	June 14	804	185 / 186	88	1536
Game-board	H. L. Haskell	602,179	Apr. 12	1069	253	88	207
Game-board	H. L. Haskell	602,180	Apr. 12	1071	253	88	208
Game-board	W. H. Perry	602,356	Apr. 12	1320	295	88	267
Game-counter	J. Schneider	603,514	May 3	505	110	88	696
Game device	A. Lang	604,401	May 24	2150	485	88	1069
Game or puzzle	B. B. Goldsmith	605,164	June 7	191	43	88	1387
Game-scoring device	A. Zestermann	603,258	May 3	191	44	88	636
Games of cards. Apparatus for playing duplicate	G. L. Castner	606,121	June 21	2007	460	88	1770
Garbage-closet	C. S. Robinson	606,087	June 21	1954	449	88	1759
Garbage from buildings. Apparatus for disposing of	I. C. Goodridge	606,488	June 28	2092	620	88	1923
Garden-tool	L. B. Smith	602,370	Apr. 12	1348	301	88	272
Garment and hose support. Combined	C. A. W. Lindsay	605,108	June 7	60	20	88	1365
Garment-clasp	W. G. McGee	601,814	Apr. 5	365	76	88	60
Garment distender and drier	P. O'Thayne	604,122	May 17	1644	366 / 369	88	968
Garment-hanger	T. G. Owen	605,332	June 7	516	115	88	1451
Garment-holder	A. L. Lincoln	603,335	May 3	168	37	88	633
Garment-hook	W. P. McIlyar	601,660	Apr. 5	60	16	88	16
Garment-supporter	H. S. Brewington	601,745	Apr. 5	241	48	88	46
Garment-supporter	R. Gorton	603,899	May 10	1197	271	88	849
Garment-supporter	A. S. Grimm	602,073	Apr. 12	859	188	88	170
Garment-supporter	M. B. Hammond	606,235	June 7	313	72	88	1411
Garment-supporter	W. B. Humphrey	602,305	Apr. 19	2103	476	88	489
Garment-supporter	W. G. Washburn	604,124	May 17	1697	374	88	973
Garment-supporter	O. Bleier	605,991	June 21	1792	404	88	1734
Gas analysis. Apparatus for	D. H. Chivert	604,997	May 31	2155	796	88	1297
Gas apparatus. Acetylene-	J. B. Fournier	604,659	May 24	2627	601	88	1176
Gas. Apparatus for using liquefied or compressed							

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Gas-burner	G. A. Hall	603,219	Apr. 26	2808	641	88	578
Gas-burner	J. F. Hewitt	603,373	May 3	52	14	88	611
Gas-burner	R. Momand	603,225	June 28	2218	509	88	1883
Gas-burner	W. W. Seeley	603,661	May 10	767	170	88	766
Gas-burner	C. S. Steward	603,612	May 3	656	153	88	734
Gas-burner	T. Wilson	604,108	May 17	1613	362	88	963
Gas-burner	J. S. Billwiller	603,494	Apr. 19	1444	327	88	305
Gas burner. Acetylene-	E. J. Dolan	603,535	Apr. 26	2164	491	88	456
Gas burner. Acetylene-	J. W. Bragger	605,568	June 14	919	213	88	1549
Gas-burner. Incandescent	H. F. Gabel	604,209	May 17	1805	406	88	1001
Gas-burner for water-heaters	J. D. C. Chateau	603,695	Apr. 19	1921	437	88	394
Gas-burner valve-controlling device	H. P. D. Ohlhaver	603,473	May 3	415	------	88	660
Gas-burners. Mantle for incandescent	E. N. Dickerson	603,533	Apr. 26	2162	491	88	455
Gas. Burning acetylene	J. Sedlacek	606,430	June 22	2611	602	88	1907
Gas-compressor	A. Giesler	602,802	Apr. 19	2108	474 / 475	88	498
Gas compressor. Ammoniacal-	A. S. Huffman	603,903	May 10	1354	309	88	990
Gas. Device for preventing discharge of	M. Beck	602,820	Apr. 26	2144	486 / 487	88	451
Gas-engine	J. Carnes and C. W. McKibben	603,125	Apr. 26	2005	455	88	551
Gas-engine	J. F. Duryea	605,815	June 14	1302	319 / 320	88	1637
Gas-engine	T. H. Hicks	606,396	June 28	2580	595	88	1866
Gas-engine	D. M. Tuttle	604,241	May 17	1880	416 / 417	88	1010
Gas-fixture. Safety	A. N. Hoxie	604,617	May 24	2561	584	88	1163
Gas-forming apparatus	D. Clegg	606,180	June 28	2134	490	88	1812
Gas from fermenting liquors. Collecting	J. Schneible	604,125	May 17	1646	370	88	949
Gas-generating apparatus. Acetylene-	E. Armanet	602,073	Apr. 26	2570	588	88	538
Gas-generating apparatus. Acetylene-	E. N. Dickerson	604,120	May 17	1672	376	88	974
Gas-generating apparatus. Acetylene-	J. Flood and J. Kipling	601,791	Apr. 5	295	66	88	61
Gas-generating apparatus. Acetylene-	O. Grenier and J. Grand	606,530	June 28	2802	646	88	1945
Gas-generating apparatus. Acetylene-	A. B. Griffen	605,908	June 21	1707	391	88	1714
Gas-generating apparatus. Acetylene-	G. de Rousay de Sales	604,667	May 24	2645	602	88	1179
Gas-generating apparatus. Acetylene-	J. W. Scarth and W. A. Thornton	605,137	June 7	126	32	88	1375
Gas-generating apparatus. Acetylene-	H. H. Staples	606,087	June 21	1850	427	88	1730
Gas-generating apparatus. Acetylene-	F. S. Thorn and C. Hoddle	604,190	May 17	1767	405	88	995
Gas-generating apparatus. Acetylene-	J. A. Vincent	602,189	Apr. 19	1623	380	88	313
Gas-generating apparatus. Acetylene-	J. F. Williams	606,435	June 28	2080	604	88	1909
Gas-generating gas-fixture	T. A. Bryan and J. H. Couper	603,397	May 3	288	68, 69	88	650
Gas generator. Acetylene-	J. H. Couper	605,397	June 7	650	145 / 146	88	1477
Gas generator. Acetylene-	J. H. Couper and T. A. Bryan	605,398	June 7	652	146	88	1477
Gas generator. Acetylene-	E. J. Dolan	604,140	May 17	1673	376	88	974
Gas generator. Acetylene-	C. R. Gillett and O. S. Hellwig	603,506	May 3	494	108	88	697
Gas generator. Acetylene-	E. Godin	604,039	May 17	1480	333	88	920
Gas generator. Acetylene-	W. W. Goodwin	604,879	May 31	3018	608	88	1399
Gas generator. Acetylene-	W. McGraw	606,535	May 3	547	120	88	705
Gas generator. Acetylene-	C. Ogburn	603,655	May 10	757	169	88	764
Gas generator. Acetylene-	J. M. Raymond and L. E. Leonley	606,205	Apr. 26	2786	626	88	574
Gas generator. Acetylene-	H. Schneckloth	606,305	June 28	2363	547 / 548	88	1850
Gas generator. Acetylene-	O. G. Seward	603,747	May 10	909	201 / 202	88	798
Gas generator. Acetylene-	E. E. Shuler	605,926	June 21	1629	374	88	1700
Gas generator. Acetylene-	M. Zippler	605,560	June 14	908	213	88	1549
Gas-heater	L. Ramage	605,138	June 7	109	28	88	1373
Gas-jet cut-off	F. L. Kellner and G. S. Barrows	606,334	May 3	160	37	88	633
Gas-light electrical attachment	L. Hooker	605,960	June 21	1709	393	88	1714
Gas-light tassel. Incandescent	T. N. McNish	602,351	Apr. 19	1317	293	88	266
Gas-lighter	T. J. McTighe	604,121	May 17	1643	368	88	968
Gas-mantles and apparatus therefor. Method of incinerating incandescent	H. C. Shields	604,427	May 24	2215	496	88	1100
Gas-manufacturing apparatus	H. Cousin	604,220	May 17	1686	411	88	1007
Gas-manufacturing apparatus. Acetylene-	E. F. Griffiths	603,079	Apr. 26	2561	585	88	534
Gas-meter. Prepayment	C. W. Hinman	603,260	May 10	1107	249	88	889
Gas-meter. Prepayment	A. Krieger and J. Coyle	604,116	May 17	1635	367	88	967
Gas mixer. Fuel-	H. K. Clover	605,818	May 3	196	30	88	636
Gas motor. Oil-	T. M. Doyle	602,536	Apr. 19	1665	378 / 379	88	345
Gas or gasolene engine	F. S. Mead	603,914	May 10	1221	276	88	853
Gas or oil engine	M. Grimm	605,868	June 21	1519	349 / 350	88	1679
Gas. Process of and apparatus for burning acetylene	J. Fraser	603,398	May 3	148	34, 35	88	631
Gas-producer	H. A. Deroy	604,085	May 17	1460	327	88	905
Gas-producing apparatus. Acetylene-	A. Kuhne	605,168	June 7	197	50	88	1388
Gas-regulator	W. E. H. Williams and P. Seller	602,545	Apr. 19	1654	376	88	343
Gas-regulators. Electric controller for	J. Baird	603,998	May 10	1207	311	88	869
Gas shut-off. Automatic	J. D. Forster	603,008	Apr. 5	720	153	88	186
Gas-supply meter. Prepaid	L. K. Böhm	606,441	June 28	2089	604	88	1911
Gas tip. Acetylene-	E. M. T. Boddam	605,217	June 7	298	69	88	1407
Gas under high pressure. Producing and storing	C. P. Mayer and J. H. Pomeroy	604,406	May 24	2166	467	88	1060
Gas-vending apparatus. Automatic	A. E. Deacon	604,408	May 24	2165	467	88	98
Gas-washing apparatus	G. Lebrun and F. Cornaille	601,898	Apr. 5	511	105	88	98
Gases. Burner for acetylene or other	P. F. Leary	605,866	June 21	1557	358	88	1657
Gasket. Metallic	F. Messick	602,543	Apr. 19	1643	374	88	341
Gasolene-purifier		603,960	May 10	1204	295	88	883
Gate: *See* Automatic gate. Car-gate. Drive-gate. End-gate. Farm-gate. Head-gate. Nursery-gate. Railway safety-gate. Revolving gate. Safety-gate. Swinging gate. Tilting gate. Water-gate.							
Gate	L. Arnoldt	603,753	May 10	917	203 / 204	88	795

Gate	J. W. Dean	604,308	May 17	1994	447	83	1087
Gate-operating mechanism	N. A. Phillips	601,733	Apr. 5	214	42, 43	83	41
Gear-case	H. P. Brown	603,253	May 3	17	5	83	604
Gear motion-transmitting and speed-varying mechanism. Planet-	J. H. Hare	605,226	June 7	314	72	83	1411
Gear. Reversing-	E. F. Morse	603,609	May 3	663	152	83	733
Gear. Sprocket-and-chain	J. E. Gleason	605,249	June 7	356	81	83	1419
					82		
Gear-teeth. Machine for forming	H. C. Warren	605,982	June 21	1743	400	83	1721
					401		
Gear-tooth-generating machine	H. C. Warren	605,983	June 21	1747	401	83	1721
Gear-tooth-generating machine	A. F. Bertles	603,926	Apr. 12	1286	272	83	249
Gearing	H. B. Keiper	604,534	May 24	2416	550	83	1134
Gearing	H. B. Keiper	604,662	May 24	2639	602	83	1177
Gearing	H. B. Keiper	605,738	June 14	1311	290	83	1603
Gearing	H. B. Keiper	602,659	Apr. 19	1702	409	83	369
Gearing. Angle-	J. H. Sager	605,416	June 7	662	154	83	1466
Gearing. Differential	D. Fyfe						
Generator: *See* Acetylene-generator. Formaldehyde-generator. Gas-generator. Smoke-generator. Steam-generator. Vapor-generator.							
Gilding china, earthenware, or porcelain articles	G. W. Tooker	603,296	May 3	57	.....	83	616
Gin-saw-filing machine	J. H. and W. H. Walters	603,303	May 3	96	24	83	620
Girder. Sheet or plate	C. B. Sill	602,274	Apr. 12	1189	261	83	250
					165		
Glass-annealing leer	J. H. Lubbers	602,051	Apr. 5	708	166	83	145
					330		
Glass-blowing machine	M. J. Owens. (Reissue)	11,068	June 14	1497	330	83	1645
					331		
Glass-furnaces. Means for keeping glass clear in regenerative	G. Schlueder	602,111	Apr. 12	908	195	83	183
Glass-gathering machine	E. H. Jewett	603,488	June 14	798	160	83	1594
Glass. Method of and apparatus for rolling plate	C. C. Hartung	602,447	Apr. 19	1487	339	83	312
					28		
Glass-mold	H. L. Reinhardt	605,133	June 7	119	29	83	1373
					30		
Glass-mold cooling-table	W. Haley	602,399	Apr. 12	1405	316	83	288
					317		
Glass-pressing machine	W. Fetters	602,636	Apr. 19	1809	418	83	372
Glass. Process of and machine for embedding wire in	F. Shuman	605,754	June 14	1261	291	83	1613
Glass tubes. Machine for grinding	T. W. Van Hoesen	601,720	Apr. 5	191	37	83	98
Glass-worker's tool	L. Friedrich	606,200	June 28	2153	494	83	1616
Glassware-annealing apparatus	W. Buttler	602,677	Apr. 19	1689	420	83	398
					706		
Glassware articles. Apparatus for manufacturing	C. E. Schmunk	604,908	May 31	3076	707	83	1260
Glassware-finishing machine	P. J. McDonough and T. E. Shelly	601,898	Apr. 5	531	110	83	100
Glassware. Manufacture of	G. W. Blair	604,959	May 31	3145	723	83	1294
					705		
Glassware-manufacturing apparatus	C. E. Schmunk	604,907	May 31	3070	706	83	1279
					249		
Glassware-manufacturing machine	F. O'Neill	605,648	June 14	1063	250	83	1579
Glassware. Press for making articles of	W. A. Henry and C. N. Brady	603,952	May 10	1260	201	83	805
Glove	M. Murray	605,505	June 14	819	190	83	1531
Glove	L. A. Van Praag	606,209	June 28	2546	500	83	1608
Glove-drier	J. W. Hull	606,626	June 28	2958	620	83	1974
					634		
Glove-fastener	C. A. Pfenning	603,202	Apr. 26	2784	635	83	573
Glove-fastener	J. V. Washburne	603,303	May 3	99	24	83	620
Gloves, &c. Fastener for	W. S. Richardson	605,833	June 14	1422	329	83	1644
Glue-jointing machine	R. M. Gleason, E. J. Jackoboice, and A. H. Waterson.	601,956	Apr. 5	653	187	83	193
Glue-spreading machine	E. F. Compton	603,075	Apr. 26	2579	584	83	539
Glycerin from tank-water. Recovering	D. Cameron and D. S. Carraway	602,725	Apr. 19	1904	.....	83	408
					597		
Gold-bearing sand. Apparatus for concentrating	A. McDougall	604,627	May 24	2576	598	83	1166
Gold flakes from sand. Machine for separating fine	J. N. Marion	604,566	May 24	2481	595	83	1147
Gold from refractory ores. Composition for extracting	A. G. Stephens	602,526	Apr. 19	1615	.....	83	337
Gold-leaf. Device for laying	R. E. Hastings	602,985	Apr. 26	2422	552	83	505
Gold-leaf. Device for laying	R. E. Hastings	602,986	Apr. 26	2424	553	83	505
Gold-leaf. Tool for laying	J. C. F. Kunkle	602,948	Apr. 26	2364	520	83	494
					538		
Gold-leaf. Tool for laying	J. C. F. Kunkle	602,949	Apr. 26	2365	540	83	495
Gold saver. Flour-	B. Chaloner and E. E. Lichtenberger	604,653	May 24	2620	599	83	1174
Gold-separating machine	A. F. Perks	603,794	May 10	995	233	83	810
					235		

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Gold-separating machine	B. W. Sweet	603,113	Apr. 12	906	196	83	184
					197		
Gold-washer	C. Grimes	604,980	May 31	3179	732	83	1301
Governor	C. O. Heggem	603,089	Apr. 26	2505	568	83	580
Governor	A. B. Ireland	603,303	May 3	208	46	83	640
					206		
Governor	F. W. Spacke	605,684	June 14	1148	207	83	1501
Governor	M. A. Replogle	604,544	May 24	2426	553	83	1187
Governor. Electrical	C. M. Giddings	603,899	May 10	1072	240	83	894
Governor. Engine-	H. P. Maxim	606,425	June 28	2604	600	83	1905
Governor. Explosive-engine	E. F. Williams	605,941	June 7	286	78	83	1415
Governor. Fluid-motor	E. C. Knapp	603,193	Apr. 26	2772	632	83	571
Governor for steam-engines or other motors	J. W. Smith and A. H. Anthony	604,796	May 31	2884	659	83	1344
					636		
Governor mechanism	T. A. Edison	604,740	May 31	2791	639	83	1295
					630		
Governor. Motor-	M. E. Hershey and B. T. Allen	603,189	Apr. 26	2765	631	83	570
					396		
Governor. Motor-	W. H. Gunther	603,578	Apr. 19	1699	397	83	351
Governor. Steam-engine	W. H. Gunther	603,579	Apr. 19	1701	397	83	352
Governor. Steam-engine	H. K. Leedham	603,220	Apr. 26	2611	642	83	578
Grader. Road-	C. F. Hinman	606,216	June 28	2187	504	83	1622
					505		
Grading and ditching machine	G. S. Foster	602,502	Apr. 19	1571	506	83	329
Grain. Apparatus and building for unloading and storing	E. W. Burgess	602,086	Apr. 5	763	164	83	144
Grain-binder	P. Hanson	603,445	Apr. 19	1452	386	83	311
Grain-binder	P. P. Coler	604,022	May 17	1456	326	83	934
Grain-binder cord-knotter	A. E. Deweese	604,882	May 31	2915	667	83	1249
Grain-carrier	B. G. Royal	604,703	May 24	2717	621	83	1193
Grain cleaning and scalping machine	E. J. Corser	604,094	May 17	1459	327	83	934
Grain-drill	J. F. Montgomery and W. T. Berry	605,223	June 7	508	111	83	1445
Grain-drill	B. T. Spelman	605,524	June 14	845	198	83	1535
Grain-drill	T. F. Schmitt	602,776	Apr. 19	2046	463	83	416
Grain-elevator. Portable	J. Heyrock	603,641	May 10	736	164	83	750
Grain from threshing-machines into wagons or sacks. Machine for loading	E. McKim	602,008	Apr. 12	872	189	83	177
Grain, hay, and stock rack. Combined	F. H. Schule	605,922	June 21	1625	373	83	1599
Grain-polishing apparatus	C. Stone	603,204	May 3	84	21	83	617
Grain-scourer	J. F. Koch	605,437	June 7	716	161	83	1491
Grain-separator	A. D. Bellinger	605,375	June 7	612	137	83	1469
Grain-spout	G. R. Gorham	604,880	May 31	3021	693	83	1270
					694		
Grain-treating apparatus	F. H. Schule	605,923	June 21	1626	373	83	1700
Grains, &c. Drum for glazing	J. J. Callow	605,944	June 7	347	80	83	1417
Graining	H. Silver	601,908	Apr. 5	550	113	83	104
					114		
Graining machine. Lumber-	J. W. Jones	603,453	Apr. 19	1497	341	83	314
Gramophone-needle	H. and G. Rose	605,452	June 7	740	166	83	1495
Granulating-disk	J. H. Lancaster	605,480	June 14	797	183	83	1526
					184		
Grapple, bucket, &c	T. David	605,221	June 7	506	70	83	1410
Grappling-hook	J. McCallum	603,919	May 10	1232	279	83	955
Grass-clipping device	C. Fuller	604,143	May 17	1680	280	83	976
Grate	G. L. K. Morrow	603,642	Apr. 19	1817	377	83	578
					414		
Grate-bar and furnace	S. L. Cook	604,909	May 31	3160	415	83	1207
Grate. Fireplace-	D. C. Powell	603,628	Apr. 19	1791	727	83	309
Grater	J. W. Hart	604,751	May 31	2810	642	83	1239
Grater. Nutmeg-	R. H. Pinkham	605,518	June 14	827	198	83	1532
Gravel from frozen ground. Apparatus for removing	H. Lindemann	603,660	Apr. 26	2304	499	83	464
Grinder	W. W. Boughner	606,117	June 21	2008	459	83	1709
Grinder. Lawn-mower	A. V. Ringström	604,569	May 24	2486	565	83	1145
Grinding, abrading, or cutting material and preparing same	G. H. Dyer	603,213	Apr. 12	1000	229	83	219
Grinding and polishing device	W. Woolf, A. Brown, and J. R. Rickard	604,594	May 24	2584	574	83	1155
Grinding and polishing steel balls. Machinery for	J. A. McClurg	603,405	May 3	378	575	83	653
Grinding and pulverizing apparatus. Sample	R. and L. F. Schulze	603,355	Apr. 12	1240	292	83	270
Grinding machine. Ball-	T. Cascaden, Jr	604,553	May 31	2969	681	83	1289
Grinding-mill	J. G. Mole	604,084	Apr. 26	2545	578	83	587
Grinding-mill	F. Stille	603,516	May 3	509	111	83	660
Grinding-mill	A. R. Wiens and G. J. Brands	604,706	May 24	2704	608	83	1194
Grip. Hand-	E. A. Thomforde	605,454	June 7	743	169	83	1499
Gripping device	A. C. Dinkey	604,978	May 31	3165	726	83	1283
Gripping mechanism	J. F. Himes	602,754	Apr. 19	2010	455	83	411
Grist-mills. Feed for top rolls of	C. W. Harding	602,940	May 10	1277	200	83	955
Gum receptacle. Chewing-	E. E. Bailey and T. A. Monk	603,549	May 3	566	135	83	710
Gun. Air-	H. W. Egli	602,987	Apr. 26	2347	533	83	491
Gun-barrel-cleaning device	V. Solodovnikoff	604,973	May 17	1980	430	83	1088
Gun-barrel locking device	W. H. Bevans	605,876	June 7	613	136	83	1469
Gun-carriage	L. V. Benét	606,115	June 21	2000	459	83	1708
Gun. Gas-operated	S. N. McClean	601,890	Apr. 5	413	86	83	77
Gun. Magazine bolt-	S. N. McClean	601,841	Apr. 5	434	87	83	80
Gun. Magazine bolt-	S. N. McClean	601,843	Apr. 5	430	86	83	81
Gun. Magazine bolt-	E. G. Parkhurst	604,904	May 31	3058	703	83	1277
					704		
Gun. Magazine bolt-	G. Schou	604,498	May 24	2393	494	83	1097
Gun. Magazine bolt-	A. T. Dawson	605,459	June 7	750	171	83	1497
Gun mounting. Disappearing-	E. M. T. Boddam	605,216	June 7	501	67, 68	83	1435
Gun. Pneumatic	L. M. Wiler	603,177	Apr. 12	1087	285	83	207
Gun-rack							

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Gun single-trigger mechanism	H. A. A. Thorn	602,610	Apr. 19	1756	401	88	302
Gun. Take-down	W. Mason	605,784	June 14	1295	293 294	88	1606
Hair-crimper	E. A. Smith	602,909	Apr. 26	2792	695	88	576
Hair-tie button	C. C. Davis	602,699	Apr. 19	1987	497	88	335
Hair-tonic	L. Edwards	604,111	May 17	1628		88	909
Hame-fastener	C. H. Johnson	602,945	Apr. 26	2830	696	88	1004
Hame or collar fastener	C. J. D. Strohecker	606,598	June 28	2605	672	88	1264
Hame-strap	R. Quincey	603,987	May 10	1633	395	88	870
Hammer	L. G. Young	602,971	Apr. 26	2820	547	88	501
Hammer. Compressed-air	J. Schmidt	602,198	Apr. 12	1094	283	88	314
Hammer. Drop	R. J. Good	605,544	June 14	873	205	88	1541
Hammer nail-pulling attachment. Claw	S. R. Ashley	603,299	Apr. 26	2833	646	88	568
Hammer. Pneumatic	H. G. Kotten	605,486	June 14	790	181	88	1525
Hammer. Pneumatic	A. Parfitt	604,688	May 24	2566	590	88	1167
Hammer. Power	C. A. Vaughn	606,370	June 28	2489	578 579	88	1888
Hammock attachment	I. E. Palmer	603,014	Apr. 26	2469	561	88	513
Hammock-chair. Swinging	A. Stransky	603,712	May 10	880	189	88	788
Hammock-frame	A. A. Young	606,516	June 28	2932	680	88	1999
Hammock seat attachment	I. E. Palmer	603,408	May 3	236	54	88	655
Hammock-spreader	I. E. Palmer	604,942	May 31	3121	717	88	1900
Hammock-support coupling	W. H. Wright and J. G. Dell	605,367	June 7	608	134	88	1467
Handle: *See* Broom-handle. Damper-handle. Implement-handle. Saw-handle. Sheet-metal handle. Tool-handle. Velocipede-handle. Vessel-handle.							
Handle	F. Read	605,745	June 14	1244	288	88	1609
Handle	W. E. Richards	604,880	May 31	3088	696	88	1273
Handle-bar	O. B. Mosher	604,071	May 17	1551	348	88	951
Handle-bar	T. Vantuyl	603,671	May 10	788	173	88	771
Handle-bar. Adjustable	R. R. Ball	602,421	Apr. 19	1426	325	88	303
Handle-bar. Adjustable	J. L. Hamilton, Jr	601,360	May 24	2140	481	88	1065
Handle-bar. Adjustable	J. H. La Fave	602,625	Apr. 19	1767	408	88	366
Handle-fastener or shank-lock	T. E. Wilson	604,510	May 24	2876	541	88	1126
Handle for hoes, rakes, &c	A. L. Boyer	603,550	May 3	506	125	88	711
Handle for sheet-metal vessels	J. R. McLaughlin	605,004	May 31	3230	741	88	1309
Hanger: *See* Clothes-hanger. Door-hanger. Eaves-trough hanger. Fire-harness hanger. Garment-hanger. Harness-hanger. Incandescent-light hanger. Picture-hanger. Pipe-hanger. Shaft-hanger. Shovel-hanger.							
Hanger for goods or garments	F. Nickerson	603,653	May 10	755	166	88	764
Harmonica	C. L. Curtis	605,083	June 7	95	8	88	1356
Harness back-band	J. A. Fretwell	603,005	Apr. 5	721	158	88	199
Harness-hanger	C. S. Carkin	603,940	May 10	1264	295	88	869
Harness-pad	E. L. McClain	604,567	May 24	2484	545	88	1149
Harrow	H. D. Babcock	604,268	May 17	1046	236	88	1035
Harrow	H. D. Babcock	604,269	May 17	1047	236	88	941
Harrow	G. E. Gedge	603,538	Apr. 19	1639	379	88	367
Harrow	J. I. Hoke	603,446	May 3	350	79	88	1531
Harrow	M. R. McClelland	605,506	June 14	619	190	88	1561
Harrow	W. E. Phillips	605,651	June 14	1094	228	88	619
Harrow	J. C. Sturges	603,798	May 10	1001	224	88	1050
Harrow	E. E. Whipple	604,343	May 17	2061	461 462 463	88	1050
Harrow	H. Wiard and H. M. Burdick	604,345	May 17	2066	463	88	1088
Harrow. Automatic pulverizing	A. Kissell	604,353	May 17	2080	465	88	1005
Harrow-bar. Spike-tooth	H. D. Babcock	604,223	May 17	1899	410	88	699
Harrow. Disk	D. R. Livengood	603,449	May 3	355	80	88	1049
Harrow. Riding	M. Rowe	604,339	May 17	2054	460	88	1897
Harrow. Rotary	R. Rakestraw	606,300	June 28	2856	545	88	1260
Harrow. Spring-tooth	H. J. Case	604,854	May 31	3073	661 662	88	1022
Harrow. Spring-tooth	C. S. Sharp	604,271	May 17	1916	420	88	1088
Harrow. Spring-tooth	J. E. Shelbley	604,272	May 17	1918	420	88	89
Harvester	J. F. Appleby	601,366	Apr. 5	478	97, 98	88	379
Harvester and binder. Corn	W. H. Gray	602,659	Apr. 19	1846	430 431 438	88	1047
Harvester cord-knotter. Self-binding	H. E. Pridmore	604,336	May 17	2046	458	88	220
Harvester. Corn	G. Gowen	602,216	Apr. 12	1097	241	88	901
Harvester. Corn	W. H. Gray	602,157	Apr. 12	996	218 219 150 151 158	88	739
Harvester. Corn	D. F. Leishman	603,608	May 3	678	94	88	1366
Harvester. Corn	A. Neer	605,121	June 7	88	91	88	1359
Harvester. Corn	J. H. Newell	605,122	June 7	91	94, 95	88	1580
Harvester. Corn	D. T. Phillips	604,650	June 14	1080	251	88	51
Harvester. Corn	C. S. Sharp	601,760	Apr. 5	525	52	88	51
Harvester. Corn	C. S. Sharp	601,761	Apr. 5	525	52, 53	88	51
Harvester. Corn							
Harvester. Grain	G. A. Farrall	603,750	May 10	7989	205 206	88	797
Harvester grain-adjuster	J. W. Pridmore	602,809	Apr. 19	2113	477	88	430
Harvester. Mint	O. E. Abbey	602,998	Apr. 12	1289	270	88	947
Harvester. Potato	J. N. Cocker. (Reissue)	11,674	June 28	2676	600 601	88	1977
Harvester-truck	J. A. Graham and E. J. Birkett	603,080	Apr. 5	733	165	88	145
Harvesters. Butt-adjuster for self-binding	W. Butterfield	605,366	June 7	608	142	88	1473

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Harvesting-machine	J. C. Moore	603,652	May 10	753	167 168	88	768
Harvesting machine. Corn	C. H. Withaeger	603,307	May 3	106	25	88	682
Harvesting-machines. Tangled-grain separator for	A. A. Hamilton	606,137	June 21	2080	467	88	1775
Hasp-fastener	J. A. Mosher	605,645	June 14	1060	246	88	1578
Hat-body-shaping apparatus	J. B. Buckman	605,073	June 7	10	3	88	1355
Hat-body-sizing machine	C. E. Keator	603,926	May 10	1210	274	88	851
Hat-brim-curling machine	J. Agar	603,719	May 10	860	191	88	784
Hat-brim-curling machine	G. Segschneider	602,246	Apr. 12	1140	250	88	259
Hat brims. Machine for ironing straw	A. Bobelen	602,389	Apr. 12	1208	264	88	248
Hat-fastener	D. V. Garis	606,006	June 21	1790	411	88	1728
Hat-fastener	O. J. Jones and M. B. Kerr	601,657	Apr. 5	61	12	88	18
Hat-fastener	W. N. Murdock	605,116	June 7	80	23	88	1357
Hat-fastener	W. Lord	606,486	June 28	2606	621	88	1981
Hat-guard	L. T. Hallock	603,445	May 3	350	78	88	667
Hat-packing ring	H. C. McCarren	605,646	June 14	1061	249	88	1570
Hat-pin	F. Stefany	601,980	Apr. 5	699	149	88	1328
Hat-pin	W. F. Kesminger	603,880	May 10	1075	240	88	685
Hat-pin securer	F. Wagenblass	603,544	May 3	559	128	88	709
Hats, coats, umbrellas, &c. Holder for	W. H. Frazine	603,816	May 10	1093	231	88	819
Hay-cocking machine	J. D. Coxwell	605,080	June 7	29	6	88	1357
Hay-press	R. A. Simpson	602,145	Apr. 12	908	211 212	88	195
Hay rake and stacker	J. R. Vaughn and M. Jenkins	603,034	May 31	3273	739	88	1318
Hay-rake. Folding	J. H. Buttorff	602,973	Apr. 26	2468	548	88	501
Head-gate	J. Morris	601,069	May 17	1542	347	88	949
Header platform connection	F. W. Dressel	600,876	May 10	1159	261	88	842
Headlight. Electric	J. C. Henderson	601,046	May 17	1495	336 337	88	941
Heat-economizer	E. B. Petersen	605,129	June 7	104	27	88	1371
Heat or cold indicator							
Heater: *See* Car-heater. Electric heater. Feed-water heater. Fireplace-heater. Gas-heater. Hot-water heater. Steam or hot-water heater. Water-heater.							
Heater	E. C. Hall	604,859	May 31	2998	686 687	88	1263
Heating and cooking device	J. Allingham	604,880	May 31	3012	686 687	88	1249
Heating apparatus	J. W. Yates	604,819	May 31	3011	686	88	1248
Heating apparatus. Air	H. Baetz	604,013	May 17	1443	333	88	981
Heating-boiler	L. S. Daniels	602,831	Apr. 26	2161	490	88	455
Heating by means of liquid hydrocarbons. Apparatus for	J. A. Rambaud	603,658	May 10	702	160	88	765
Heating-furnace	A. Laughlin and J. Reuleaux. (Reissue.)	11,666	May 31	3331	765 766	88	1309
Heating or vulcanizing apparatus	G. W. Slater	606,364	June 28	2481	576	88	1881
Heating system. Steam	A. G. Paul	604,385	May 17	2063	457 458	88	1046
Heating utensil	J. H. Alexander	605,571	June 14	930	217	88	1538
Heddle-bar locking-clamp	M. J. Armstead	603,808	May 10	1083	238	88	816
Heel	J. E. O'Neill	606,220	June 28	2226	511 512	88	1830
Heel-building machine	E. S. Gross	602,005	Apr. 5	734	154	88	187
Heel for boots or shoes. Detachable	A. Maebert	606,016	June 21	1611	418	88	1722
Heel-seats and rands for boots or shoes. Cutter for trimming	O. L. Noble	605,647	June 14	1062	249	88	1579
Heel-spring. Boot or shoe	G. E. Swan	604,805	May 31	2991	661	88	1245
Hermetic fastening for preserve or other tins	I. Bloch	601,787	Apr. 5	517	69	88	60
Hide, skin, or leather machinery	W. Evans	602,096	Apr. 12	925	179	88	168
Hides or skins for transport. Curing	J. W. Scott	602,476	Apr. 19	1326		88	382
Hides or skins. Machine for working	A. F. Jones	601,808	Apr. 5	639	73	88	66
Hides or skins. Machine for working	A. F. Jones	601,809	Apr. 5	658	73, 74	88	67
Hinge	G. N. Benson	604,718	May 31	2750	608	88	1218
Hinge	M. Donne and C. J. Mathias	602,530	Apr. 19	1567	357 358	88	226
Hinge	J. J. Farrar	603,897	May 10	1194	270	88	648
Hinge	H. D. Granger	602,946	Apr. 26	2187	496	88	480
Hinge	R. G. Park	605,500	June 14	824	191	88	1531
Hinge	J. R. Haldeman	605,420	June 7	697	155	88	1457
Hinge. Gate	W. M. Hotaling	606,415	June 28	2577	596	88	1899
Hinge. Lock	A. D. Anthony	604,165	May 17	1717	397	88	909
Hinge. Spring	H. Leppert	605,105	June 7	66	19	88	1355
Hinge-washer. Antifriction	T. M. Henderson and T. E. Freeman	602,750	Apr. 19	2004	454	88	410
Hitching device	W. S. Endslow	602,313	Apr. 12	1259	279	88	954
Hitching or unhitching device	W. G. Avery	604,267	May 17	1944	436	88	1089
Hod. Mortar	C. M. Brown	603,495	Apr. 19	1446	328	88	305
Hoe. Shuffle	J. Campbell	602,736	Apr. 19	1957	446 447	88	408
Hoisting and conveying apparatus	J. Campbell	604,898	May 31	3089	697 698	88	1273
Hoisting and conveying apparatus	J. H. Lancaster	605,894	June 21	1538	356 357	88	1686
Hoisting and conveying apparatus	H. R. Palmer	603,168	Apr. 12	1013	238	88	204
Hoisting and conveying machine. Bucket	S. Jackson	602,851	Apr. 26	2192	497	88	461
Hoisting apparatus	H. S. Haskins and Z. B. Coes	602,580	Apr. 19	1705	388	88	338
Hoisting apparatus	R. Johnston	603,198	Apr. 26	2769	631 632	88	571
Hoisting apparatus	W. G. Miller	603,608	Apr. 19	1746	396	88	390
Hoisting device	R. Stewart and W. B. Winchel	604,803	May 31	2995	680	88	1244
Hoisting-machine	J. H. Lancaster	604,900	May 31	3060	700 701	88	1276
Holdback. Adjustable	F. Sier	605,080	May 31	2947	746	88	1214
Holdback device	O. P. Baker	603,490	May 3	305	69	88	698
Hoof-pad	C. J. Horton	603,843	June 28	2443	586	88	1874

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Hook: *See* Bag-hook, Check-hook, Coat-hook, Garment-hook, Grappling-hook, Lacing-hook, Pail-hook, Paint-pot hook, Rope-clamping hook, Snap-hook, Sword-slinging hook, Whiffletree-hook.							
Hook and bushing for same	J. W. Carder	608,573	May 3	222	49	83	643
Hook and eye	C. F. Robbins	601,816	Apr. 5	308	77	83	69
Hook and eye	P. Young, (now by marriage P. Young Weeks.)	604,135	May 17	1606	375	83	978
Hoop: *See* Trundle-hoop.							
Hoop-sawing machine. Barrel-	T. C. Seekel	605,349	June 7	565	125	83	1460
Horn or similar material. Process of and apparatus for utilizing	A. Mitscherlich	602,227	Apr. 12	1123	247	83	226
Horse-boots, &c. Suspending device for	P. Meissner	601,974	Apr. 5	660	144	83	139
Horse-controlling device	G. A. Hidden	605,045	May 31	2091	753	83	1322
Horse-detacher	C. B. Hardin and J. D. Mosby	604,469	May 24	2601	583	83	1115
Horse-detacher	C. F. Kincheloe	606,419	June 28	2598	598	83	1902
Horse-detacher	J. Staley	603,434	May 3	331	74	83	663
Horse-detacher	F. A. Millett	602,953	Apr. 26	2371	540 / 541	83	496
Horse-foot-leveling device	C. L. Alexander	602,535	Apr. 19	1632	373	83	339
Horse-rake	W. S. Hitch	602,040	Apr. 5	792	171	83	150
Horseshoe	N. L. Olson	603,573	May 3	600	139	83	716
Horseshoe	E. F. Smith	604,091	May 17	1580	357	83	956
Horseshoe	R. Whitaker	605,706	June 14	1282	297	83	1617
Horseshoe-calk	W. J. Browning	603,280	May 3	199	45	83	640
Horseshoe-calk. Removable	P. Krumscheid	602,357	Apr. 12	1380	309	83	278
Horseshoe. Cushioned	T. M. Miller	602,295	Apr. 12	1121	246	83	225
Horseshoe. Elastic	G. Greenwood	602,622	Apr. 19	1792	407	83	367
Horseshoe. Elastic-cushioned	W. B. Hopkins	603,466	May 3	408	90	83	679
Horseshoe. Elastic-tread	E. S. Barrows	604,014	May 17	1444	333	83	931
Horseshoe. Hoof-spreading	W. H. Bordner	603,675	May 10	798	174	83	772
Horseshoe. Marsh-	M. Schmitt	603,975	May 10	1315	308	83	873
Horseshoe-nail clencher and hoof-trimmer	J. Sweeney	603,485	Apr. 19	1547	350	83	894
Horseshoe-pad	A. Fremerey	604,084	May 17	1474	330	83	987
Horseshoe. Rope-tread	R. S. Wiesenfeld	604,616	May 31	2006	665	83	1249
Horseshoe. Soft-tread	W. H. Wolf	603,866	May 10	1141	267	83	886
Hose-bridge	P. J. Doyle	601,639	Apr. 5	27	6	83	7
Hose. Clamp for handling hydraulic	M. C. Hoard	602,753	Apr. 19	2012	456	83	411
Hose-coupling	F. H. Marshall	603,863	Apr. 26	2207	500	83	464
Hose-coupling	J. N. McLean	603,228	Apr. 26	2817	643	83	580
Hose-coupling	P. Riehl, Jr	603,366	May 3	206	47	83	641
Hose-coupling	F. A. Wunderlich	603,400	May 3	308	68	83	677

Hose-coupling. Automatic	G. W. Wallis	601,699	Apr. 5	119	23	83	25
Hose-coupling reshaper	D. B. Smith	601,688	Apr. 5	107	21	83	23
Hose-coupling. Swivel	C. H. Dale	602,617	Apr. 19	1771	404	83	365
Hose-nipple	J. H. Fry	604,095	May 17	1476	331	83	927
Hose-nozzle	R. Wise	604,554	May 24	2456	556	83	1141
Hose-nozzle	W. P. Wilson	605,750	May 10	914	208	83	795
Hose-pipe nozzle and spraying device. Combined	I. R. Devendorf and C. L. Earl, Jr	604,381	May 17	1839	412	83	1007
Hose-rack	H. J. M. Howard	601,653	Apr. 5	52	10	83	11
Hose-rack	C. W. Ruby	603,307	Apr. 26	2790	637	83	575
Hose rack or support	E. Cliff	601,682	Apr. 5	18	3	83	5
Hose-reel	E. Cliff	601,681	Apr. 5	15	4	83	5
Hose-reel	E. Cliff	602,057	Apr. 12	806	175	83	165
Hose-reel	D. Harrison	605,480	June 14	779	179	83	1383
Hose-supporter	J. J. Nealon	603,430	May 3	362	72	83	661
Hose-supporter	A. R. Blasse	603,809	May 10	1025	228	83	817
Hot-air furnace	T. G. Neal	605,282	June 7	512	114	83	1451
Hot-air furnace, &c	R. and E. H. Robinson	605,517	June 14	884	194	83	1533
Hot-air furnace	H. A. Tinkham	604,532	May 24	2453	557 / 558	83	1141
Hot-air furnace	J. T. Warren	601,822	Apr. 5	879	79, 80	83	71
Hot-air furnace	C. W. Spurr, Jr	602,810	Apr. 19	2116	477	83	430
Hot appliance	W. P. Wight	602,649	Apr. 19	1880	417	83	376
Hothouse tile bench	J. White	604,484	May 24	2383	529	83	1120
Hot-water heater							
House: *See* Dry-house, Knockdown house, Portable house, Poultry-house, Power-house.							
Hub cap and nut. Combined	J. A. Crandall	604,913	May 31	2065	708	83	1282
Hub. Expanding	L. F. Vollrath	604,978	May 17	1920	432	83	1025
Hub. Vehicle-	W. T. Lewis	606,350	June 28	2452	566	83	1675
Hub. Vehicle-wheel	G. A. Krohn	601,953	Apr. 5	457	98	83	85
Hub. Wheel-	G. A. Skarin	605,208	June 7	280	65	83	1408
Hubs, couplings, or the like to shafts. Means for connecting	G. C. Howard	602,181	Apr. 12	1082	236	83	208
Hubs. Means for manufacturing wheel-	R. Chillingworth	606,046	June 21	1866	430	83	1743
Hydrant and stand-pipe	L. Genest	604,611	May 24	2550	588	83	1161
Hydrant, stop-valve, or the like	C. Jones	601,967	Apr. 5	970	142	83	127
Hydraulic elevator	L. Kramer	603,566	May 3	591	131	83	715
Hydraulic engine	J. Gill	606,337	June 28	2438	542 / 544	83	1672
Hydraulic jack	F. C. Brooks	605,680	June 14	1054	242	83	1573
Hydraulic lubricator	J. E. Spencer	602,371	Apr. 12	71349	301	83	272
Hydraulic-motor-regulating device	A. J. L. Loretz	605,169	June 7	198	50	83	1398
Hydraulic press	F. M. Leavitt	604,066	May 17	1514	340 / 341 / 342	83	945
Hydrocarbon-burner	C. R. Kittle	605,200	June 7	257	60	83	1399
Hydrocarbon-burner	J. M. Merritt and B. F. Goodrich	605,554	June 14	808	208	83	1545
Hydrocarbon-burner	J. Reidenbaugh	603,740	May 10	804	199	83	791

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Hydrocarbon burner. Liquid-	G. W. Prescott	606,228	June 28	2242	517 / 518	83	1533
Hydrogen. Apparatus for manufacturing carbureted	W. H. and G. E. Russell	602,406	Apr. 12	1415	330	83	265
Ice-cream freezer	J. A. E. Anderson	603,227	Apr. 26	2231	646	83	583
Ice-cream freezer	E. C. Hill	605,606	June 14	1008	231	83	1564
Ice-cream freezer	R. L. Porter and J. D. Faulkner	604,314	May 17	1812	407	83	1008
Ice-cream freezer	A. Gifford	604,007	May 10	1424	318 / 319	83	897
Ice-handling machinery	G. W. Busch	601,869	Apr. 5	483	99	83	90
Identifying device	J. B. Rhodes	604,480	May 24	2319	526 / 527	83	1118
Impact-tool	C. J. Ericson	602,314	Apr. 12	1261	279	83	255
Implement. Changeable	A. L. Adams	604,105	May 17	1616	363	83	964
Implement-handle	S. Zacsek and E. O. Gottlieb	604,222	May 17	1828	409	83	1005
Incandescent burner	J. W. McKnight	606,226	June 28	2219	510	83	1898
Incandescent-burner protector	F. C. Bell	601,980	Apr. 5	583	121	83	111
Incandescent-light hanger. Adjustable	J. Moeller	606,234	June 28	2217	509	83	1898
Incandescent lights. Mantle or hood for Welsbach or other	F. A. F. Graefe	602,505	Apr. 19	1575	360	83	330
Incandescent-mantle protector	R. T. Kanski and E. S. Freeman	602,017	Apr. 5	740	159	83	140
Incubator	J. B. Roberts	603,850	May 10	1127	253 / 254	83	835
Incubator	J. A. Best	602,718	Apr. 19	1956	444	83	401
Index	W. E. Coons	603,802	May 10	1186	268	83	847
Index	W. M. Daly	603,944	May 10	1270	289	83	863
Index. Ledger-							
Indicator: *See* Cash-indicator, Current-indicator, Heat or cold indicator, Office-indicator, Speed-indicator, Station-indicator, Street-indicator, Valve-indicator.							
Indicator	W. H. Winder. (Reissue)	11,670	June 21	3112	485 / 486	83	1789
Induction-coil	A. L. Bogart	605,174	June 7	207	52	83	1390
Inflation-tube	J. C. MacSpadden	603,510	May 3	499	109	83	697
Ingots. Mechanism for piercing metal	J. C. Sturgeon	601,763	Apr. 5	311	61, 62	83	59
Ingots. Producing hollow	J. T. Rowley	603,206	Apr. 26	2789	636	83	575
Inhaler	W. B. Hidden	604,935	May 31	3115	715	83	1288
Inhaler	J. H. Kellogg	605,436	June 7	716	161	83	1491
Injector	J. W. Gamble	602,537	Apr. 19	1637	373	83	340
Injector	J. Huber	604,233	May 17	1841	412	83	1008
Ink. Printing-	F. B. Hall	606,542	June 28	2807	------	83	1945
Inkstand	E. Davis	605,177	June 7	213	53	83	1391
Insecticide	J. B. Carmichael	605,537	June 14	903	207 / 208	83	1539
Insole-reinforcing machine	J. B. Hadaway	603,763	May 10	932	209 / 210	83	798
Insole-reinforcing machine	J. B. Hadaway	603,764	May 10	933	209 / 210	83	799
Inspirator. Thermal	C. F. Dight	603,021	Apr. 26	2477	562	83	514
Instructing device	R. Springborn	605,144	June 7	162	40	83	1381
Insufflator	A. Hoenig	602,010	Apr. 5	732	156	83	139
Insulated pipe-coupling	G. Peeples	602,564	Apr. 19	1675	361	83	347
Insulated wire. Machine for restoring	N. Wilson	601,694	Apr. 5	125	24	83	27
Insulating electrodes for electric gas-lighting burners.	A. L. Bogart	605,661	June 14	1106	255	83	1568
Insulating handle connection	W. McAusland	605,448	June 7	735	166	83	1494
Insulator	F. M. Locke	605,109	June 7	70	20	83	1365
Insulator	R. D. Mershon	605,256	June 7	380	86	83	1423
Insulator	L. McCarthy	605,741	June 14	1240	287	83	1600
Insulator. Strain-	J. R. Fletcher	602,576	Apr. 19	1696	386	83	350
Insulators, &c. Bracket-	F. L. Merritt	605,583	June 14	954	221 / 222	83	1556
Internal-combustion engine	D. M. Moore	604,684	May 24	2673	612	83	1185
Interrupter. Automatic vibratory	J. Drawe	602,756	May 10	930	204	83	796
Invalid-rest	J. H. Chandler	601,945	Apr. 5	939	183	83	120
Invalid-table	L. O. Helmers	602,943	Apr. 26	2354	------	83	498
Iodin derivative of ichthyol and thiol							
Iron: *See* Sad-iron, Smoothing and pressing iron.							
Iron-cutting device	H. J. Shaffer	604,270	May 17	1915	428	83	1022
Iron. Making planished sheet-	J. Stephens	605,595	June 28	2808	------	83	1963
Iron. Producing silicids of	G. de Chalmot	602,976	Apr. 26	2407	------	83	502
Iron. Silicid of	G. de Chalmot	602,975	Apr. 26	2406	------	83	502
Ironer. Laundry-	A. B. Smith and J. G. Rapp	602,607	Apr. 19	1753	400	83	361
Ironing-board	D. McDonough	602,563	Apr. 19	1674	381	83	347
Ironing-board	E. A. Procott	603,831	May 10	1076	240	83	825
Ironing-board	F. E. Fay. (Reissue)	602,267	Apr. 12	1177	258	83	227
Ironing-machine for smoothing cuff and collar edges	S. J. Coggins	11,664	May 17	2096	468	83	1055
Ironing-table	W. E. Harriman	602,498	Apr. 19	1450	320 / 321	83	306
Ironing-table	J. G. Sebold	606,210	June 28	2178	500 / 501	83	1890
Ironing-table		603,474	May 3	417	93	83	660
Jack: *See* Hydraulic jack, Lifting-jack, Pumping-jack, Wagon-jack.							
Jar: *See* Fruit-jar, Fruit or other jar.							
Jar	J. P. Lyon	603,911	May 10	1217	276	83	853
Jar and can opener. Fruit-	J. J. Schairer	606,587	June 28	2686	603	83	1931
Jar and temporary closure therefor	J. P. Lyon	603,910	May 10	1215	275	83	853
Jar or other receptacle for preserves, &c	L. Wurmburg	603,701	Apr. 19	2060	470	83	422
Jar, top, and wrench for preserving fruits, &c	G. P. Jaggard	605,488	June 14	781	179	83	1383
Jardinière	H. Waterer	603,493	May 3	464	108	83	669

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Jaw wrench. Sliding	A. Enos	601,954	Apr. 5	651	126	83	122
Jetty for deepening tidal ways. Automatic	J. A. L. Waddell	604,810	May 31	2900	668	83	1947
Jeweler's stone-setting instrument	J. A. Owens	602,701	Apr. 26	2768	634	83	573
Jewelry. Article of	F. X. Zirnkilton	606,617	June 28	3033	690	83	1969
Jig for securing cycle parts, &c., while being bored or machined.	F. J. T. Haskew	605,979	May 3	220	51	83	644
Joint:

Labeling machine. Can	W. S. Craig	605,658	June 21	1504	345	83	1676
Labeling machine. Can	T. C. Northcott, J. N. Lake, and J. Clark.	606,227	June 28	2221	510 511	83	1889
Labeling-machine. Pneumatic	C. F. Tebbetts	603,669	May 10	788	179 178	83	706
Lace fastener. Shoe	J. E. Kennedy	602,905	Apr. 26	2321	530	83	477
Lace fastener. Shoe	F. P. Schults	604,128	May 17	1650	370	83	970
Lacing-hook for shoes	L. F. Earl	602,941	Apr. 26	2474	498	83	497
Lacing-hook for shoes, gloves, &c.	L. F. Earl	602,942	Apr. 26	2177	498	83	498
Lacing-hook-setting machine	S. N. Smith	602,881	Apr. 26	2321	503	83	469

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Lacing-strip	M. K. and M. H. Bortree	603,313	May 3	116	27	83	624
Lacquer and lacquering	D. Marcus	603,913	May 10	1220	283	83	863
Ladder and ironing-board. Combination step-	A. Samuelson	603,580	May 10	1046	243	83	661
Ladder. Combined step and extension	E. Cardarelli	605,905	June 21	1768	405	83	1734
Ladder. Extension	P. Bourne	605,469	June 14	762	175	83	1520
Ladder. Extension	F. Heine	606,458	June 28	2654	611	83	1915
Ladder. Extension step	P. Herder	606,848	May 10	1101	247 548	83	520 1123
Ladder. Portable adjustable	H. Huber	604,531	May 24	2411	549	83	1751
Ladder. Step	W. Nehring	606,071	June 21	1915	440	83	719
Ladder. Step	O. Richardson	603,579	May 3	607	135	83	1119
Ladder. Step	W. O. Seaman	604,488	May 24	2327	526	83	35
Ladder. Step and extension	C. Napier	601,714	Apr. 5	179	35	83	1911
Lamp	R. D. Cody	606,445	June 28	2634	606	83	1727
Lamp	R. M. Dixon	606,002	June 21	1781	408	83	1697
Lamp. Acetylene-gas	O. E. Heese	606,265	June 28	2519	585	83	798
Lamp. Acetylene-gas	O. G. Seward	603,746	May 10	906	201	83	1830
Lamp. Acetylene-gas-generating	H. Oehl	606,283	June 28	2625	511	83	921
Lamp. Aldehyde	E. Fournier	603,683	May 10	809	177	83	773
Lamp-burner	J. H. O'Brien	603,115	Apr. 26	2647	601	83	547
Lamp-burner	L. R. Oakes	601,412	May 24	2186	490	83	1094
Lamp-burner	J. H. White	603,417	May 3	302	68	83	658
Lamp-burner	V. Bürklin	602,291	Apr. 12	1388	311	83	279
Lamp burner and wick. Combined	W. E. Ward	605,599	June 14	854	200	83	1537
Lamp. Desk	D. Miseli	603,112	Apr. 26	2641	600	83	545
Lamp. Electric	F. A. Gilbert and E. O. Lundin	603,630	May 10	715	160	83	756
Lamp. Electric-arc	J. H. J. Haines	603,687	May 10	809	178 179	83	775
Lamp. Electric-arc	D. Higham	605,714	June 14	1200	277	83	1601
Lamp. Electric-arc	W. Hochhausen	605,228	June 7	218	73, 74	83	1411
Lamp. Electric-arc	A. W. Knutson	603,853	May 3	225	53	83	646
Lamp. Electric-arc	J. Mueller	602,404	Apr. 12	1410	318	83	284
Lamp. Electric-arc	T. H. Pettengill	603,253	May 3	67	17	83	614
Lamp. Electric-arc	F. W. Steinacker and E. F. Cowley.	604,219	May 17	1819	408 409	83	1003
Lamp. Electric-arc	E. Thomson	602,980	Apr. 26	2313	527	83	484
Lamp. Electric-arc	E. Weber	602,380	Apr. 12	1364	305	83	275
Lamp. Electric-arc	F. Wright	606,108	June 21	1988	456	83	1765
Lamp. Electric incandescent	W. J. Phelps	603,705	May 10	886	186	83	789
Lamp for incandescent lights. Petroleum	A. Duffek	602,900	Apr. 26	2266	517	83	475
Lamp globe. Incandescent	V. de Sprüner-Mertz	605,085	May 31	3257	748	83	1315
Lamp. Incandescent electric	M. W. Dewey	603,056	Apr. 26	2630	575	83	584
Lamp. Incandescent electric	O. H. Michaelson	605,498	June 14	909	187	83	1529
Lamp. Incandescent gas	F. C. von Heydebrand und der Lasa and J. Loch.	605,250	June 7	369	84	83	1421
Lamp or lantern reflector attachment	W. Prewett	606,027	June 21	1882	422	83	1735
Lamp regulator. Electric	D. M. Moore	604,660	May 24	2066	611	83	1184
Lamp regulator. Incandescent-electric	D. M. Moore	604,670	May 24	2065	611	83	1163
Lamp. Safety incandescent electric	F. G. W. J. Adams	606,263	May 10	1170	264	83	844
Lamp safety-lock. Incandescent	E. Faller and H. Herbstritt	606,279	June 7	424	95	83	1432
Lamp. Self-adjustable bicycle	F. S. Snyder	606,354	June 7	572	126	83	1461
Lamps, &c. Automatic igniting device for gas-	C. F. Nebendahl	604,074	May 17	1558	349	83	958
Lamps, gas-burners, &c. Support-bracket for	C. M. Toland	604,183	May 17	1666	374	83	973
Land-roller	W. F. Goodhue	601,775	Apr. 5	293	56	83	56
Land-roller	W. Wildman	602,968	Apr. 26	2295	548	83	500
Lantern	A. L. Baron and J. F. Haffey	602,206	Apr. 12	1078	236	83	217
Lantern	E. M. Rosenbluth	606,023	June 21	1834	422	83	1736
Lantern-bracket	J. W. Bragger	602,122	Apr. 12	921	201 202	83	186
Lantern. Electric	F. G. W. J. Adams	603,682	May 10	1168	264 265	83	844
Lantern. Electric	O. C. Prasse	601,758	Apr. 5	263	51 415	83	50 1010
Lantern. Oven	F. C. Stolz	604,239	May 17	1857	416	83	499
Lantern. Vacuum-tube	L. Wallach	602,966	Apr. 26	2293	545 649	83	1234
Lappet-shearing mechanism	E. T. and E. H. Marble	604,772	May 31	2940	650	83	1094
Last	E. L. Goding	604,382	May 24	2132	479	83	1094
Last	E. L. Goding	604,383	May 24	2133	479	83	1784
Last	J. F. Grant	606,164	June 21	2090	490	83	809
Last	E. O. and G. A. Krentler	603,790	May 10	988	221	83	1617
Last	E. C. Wright	605,766	June 14	1295	296	83	1766
Last. Shoe	G. H. Banks	606,114	June 21	1909	458 123	83	111
Lasting-machine	M. Brock	601,933	Apr. 5	596	123 124	83	112
Lasting-machine	M. Brock	601,934	Apr. 5	594	124 125	83	112
Lasting-machine	M. Brock	601,935	Apr. 5	598	125 126	83	114
Lasting-machine	M. Brock	601,936	Apr. 5	604	127 128	83	115
Lasting-machine	M. Brock	601,937	Apr. 5	610	128 129	83	115
Lasting-machine	M. Brock	601,938	Apr. 5	614	129 130	83	116
Lasting-machine	M. Brock	601,939	Apr. 5	619	130 131	83	117
Lasting-machine	M. Brock	601,940	Apr. 5	625	131 132	83	1351
Lasting-machine	C. Eisenberg	605,091	June 7	44	14	83	1618
Lasting-machine. Hand	G. H. Abeel	605,770	June 14	1288	290	83	1288
Latch	N. J. Meigs	605,170	June 7	301	51	83	1890
Latch	H. E. Russell	606,246	June 28	2206	523	83	470
Latch	H. G. Voight	603,966	Apr. 26	2242	509	83	948
Latch and lock combined	O. Holmes	606,550	June 28	2321	649	83	1949

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Latch and lock. Combined	W. L. Smith and H. M. Putt	605,353	June 7	570	126	83	1461
Latch. Gate-	F. A. Raenhart	602,590	Apr. 19	1606	267	83	1135
Latch mechanism	C. H. Brigden	604,516	May 24	2385	543	83	1199
Latch. Sliding-door	C. R. Case	602,728	Apr. 19	1972	448	83	404
Lathe attachment	A. J. Farmer	603,400	May 3	299	60	83	652
Lathe attachment	T. C. Walker	602,905	Apr. 26	2390	545	83	499
Lathe boring-bar device	F. Stansbury	603,208	May 3	81	21	83	617
Lathe-dog	W. Sandiford	602,606	Apr. 19	1751	399	83	361
Lathe. Engine-	B. A. Wheeler	602,934	Apr. 26	2317	526	83	485
Lathe recessing-tool	G. E. Miller	605,184	June 7	227	55	83	1394
Lathe turret-head. Automatic	A. J. Johnson	603,484	May 3	439	96	83	686
Lathing	P. Kühne	604,698	May 24	2710	619	83	1191
Lathing. Die for making metallic	C. Forth	604,525	May 24	2397	545	83	1131
Lathing. Roller-die for making metallic	A. R. Fordyce	604,695	May 24	2705	618	83	1190
Lawn-rake. Rotary	F. H. Walton	604,812	May 31	2001	663 664 445	83	1247
Leads, spaces, and quads from dead-matter. Machine for discarding	P. F. Cox	604,305	May 17	1977	444 445	83	1084
Leather and rubber substitute	O. B. Dodge	601,826	Apr. 5	267	88	83	72
Leather-dressing composition	D. Marcus	602,702	Apr. 19	2019	.....	83	413
Leather-dressing machine	E. B. Parkhurst	604,908	May 31	3056	703	83	1277
Leather-shaving-machine knife-sharpening mechanism.	J. Boyle	605,627	June 14	1050	241	83	1572
Leather-staking machine	M. H. Connor	605,272	June 7	412	93	83	1430
Leather-staking machine	J. Craig and F. F. Slocomb	604,500	May 24	2402	560 561	83	1143
Leather-work. Rotary cutter for	E. Childs	604,002	May 10	1413	316	83	895
Lecture-room seat	H. B. Hiteshew and W. F. Spieth	601,874	Apr. 5	491	101	83	91
Lemon-squeezer	C. Morgan	602,088	Apr. 12	965	188	83	175
Lemonade-shaker	J. L. and Z. R. Green	602,989	Apr. 26	2351	536	83	498
Lens-cutting machine	F. G. Blanchard	602,907	Apr. 12	1079	236 237	83	217
Lens for illuminating tiles	J. Mark	602,763	Apr. 19	2020	456	83	413
Lens for sidewalks. Illuminating-	E. J. Sullivan	603,799	May 10	1002	224	83	812
Letter-box	P. S. Bates	604,956	May 31	3141	722	83	1294
Letter-box	J. J. Herzog	604,323	May 17	2018	451 452	83	1041
Letter-box	M. J. Wine and C. A. Thompson	605,592	June 14	970	224	83	1589
Letter-press book	A. Kahn	603,729	May 10	878	195	83	788
Letters, &c. Apparatus for keeping	T. B. Vernon	602,116	Apr. 12	912	198 199	83	185
Level	J. Linton and J. Burgher	602,137	Apr. 12	942	206	83	190
Level and grading instrument. Combined spirit-	C. Castor	601,629	Apr. 5	9	2	83	4
Level. Plumb-	T. N. Roach	602,874	Apr. 26	2221	508	83	467
Level. Plumb-	F. C. Vredenburgh and C. F. Lathrop.	603,368	May 3	208	47	83	641
Level. Spirit-	J. Hartford	604,995	May 31	3186	734	83	1302
Lid for pots, &c	J. W. Strother	606,599	June 28	2906	672	83	1964
Lid-holder	J. Hitt	603,753	Apr. 19	2009	455	83	411
Lid-lifter	L. J. A. Moritz	604,477	May 24	2314	525	83	1117
Life-insurance table or chart	N. P. Neal	602,085	Apr. 5	773	167 168	83	146
Lift. Hydraulic	T. E. Brown	604,364	May 24	2107	473 473	83	1079
Lifter: *See* Lid-lifter. Pan-lifter. Sash-lifter. Skirt-lifter. Skylight-lifter.							
Lifting device	W. T. B. Clemm	601,631	Apr. 5	12	3	83	5
Lifting-jack	P. Brown	605,072	June 7	10	3	83	1355
Lifting-jack	F. W. Chickering	602,056	Apr. 12	807	174	83	164
Lifting-jack	J. C. Hackett	604,583	May 24	2507	570	83	1159
Lifting-jack	W. E. Tyler	605,210	June 7	223	65	83	1403
Lifting-jack	F. A. Uptegrove	604,808	May 31	2996	699	83	1246
Lifting-jack	D. K. Hawley	602,045	Apr. 5	780	171	83	149
Lighter. Automatic	H. M. Edwards	604,698	May 24	2708	617	83	1189
Lighting implement	M. B. Donaldson and W. Kespohl	602,866	Apr. 19	1879	308	83	278
Limb. Artificial	H. E. Sturcke	603,295	Apr. 26	2823	645	83	561
Lime from residues. Preparing amorphous carbonate of	H. E. Sturcke	603,296	Apr. 26	2827	646	83	562
Lime from residues. Preparing amorphous carbonate of	J. Ingleby	604,306	May 24	2153	483 484	83	1088
Linoleum-mold-charging machine	G. E. Lincoln	604,404	May 24	2164	486	83	1090
Linotype and matrix for making same	P. T. Dodge	605,701	June 14	1181	272	83	1527
Linotype-machine	L. Fisher and E. W. Reynolds	604,378	May 24	2129	478	83	1093
Linotype-machine	T. H. Keller	606,166	June 21	2097	492	83	1786
Linotype-machine	F. A. Hill and W. E. Shehan	602,904	Apr. 26	2280	520	83	477
Linotype-machine attachment	T. Cahill	605,777	June 14	1305	302 303 304	83	1621
Linotype-machine, line-casting machine, and machine for making type-bars, linotypes, and matrices.	W. J. York	606,615	June 28	2980	679 680	83	1969
Liquid-conveyer	F. Oakley	606,074	June 21	1921	441	83	1758
Liquid-cooler	O. W. Swift	605,665	June 14	1151	267	83	1591
Liquid cooling and purifying apparatus	W. F. Hackett	604,818	May 17	2008	450	83	1040
Liquid-dispensing apparatus. Coin-controlled	E. H. Belden	604,514	May 24	2381	548	83	1123
Liquid-holding vessel	O. T. Joslin and H. B. Schmidt	603,085	Apr. 26	2596	590	83	536
Liquid-thickening machine	O. T. Joslin and H. B. Schmidt	603,086	Apr. 26	2597	590	83	536
Liquid-thickening machine	O. T. Joslin and H. B. Schmidt	603,087	Apr. 26	2598	590 591	83	536
Liquid transporting and preserving apparatus	P. Lochmann	601,877	Apr. 5	497	102	83	98
Liquids. Pasteurizing	J. H. W. Ortmann	603,980	May 10	1284	260	83	856
Liquids. Pneumatic elevating device for	A. Warter	605,212	June 7	235	66	83	1404

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Liquids. Storing-package for	J. Tomlinson	603,240	Apr. 26	2353	650	83	586
Liquids. Vessel for containing and administering volatile	P. P. Monnet	604,191	May 17	1773	400	83	995
Liquids with gas. Method of and apparatus for charging	H. Carmichael	604,018	May 17	1451	325	83	983
Load-sustainer for weight-lifters	W. T. Eades and T. Matthews	602,312	Apr. 12	1257	277 278	83	254
Loading or unloading apparatus	J. McMyler and G. H. Hulett	601,670	Apr. 5	81	16,17	83	17
Loading or unloading machine	J. L. Hamren	604,390	May 24	2142	481	83	1085
Lock: *See* Bicycle-lock. Caisson air-lock. Can-lock. Car-lock. Cell-lock. Combination-lock. Door-lock. Lamp safety-lock. Mail-bag lock. Padlock. Permutation-lock. Sash-lock. Seal-lock. Telephone-lock. Time-lock. Window-lock.							
Lock	E. I. Anderson and O. M. Morrill	604,961	May 31	3134	730	83	1298
Lock	A. H. Barnes	605,466	June 14	758	174	83	1519
Lock	C. H. Brigden	604,576	May 24	2493	568	83	1150
Lock	W. B. Bust	604,652	May 24	2619	599	83	1174
Lock	J. A. Gray	606,282	June 28	2926	538	83	1851
Lock	R. H. Hearn	603,951	May 10	1279	291	83	865
Lock	W. A. Petit and E. H. Miller	602,518	Apr. 19	1604	367	83	335
Lock	G. L. E. Pétorin	605,337	June 7	525	118	83	1433
Lock	H. B. Richardson	605,342	June 7	552	123	83	1458
Lock	W. D. Roberts	602,144	Apr. 12	966	211	83	194
Lock	F. W. Tobey	604,672	May 24	2656	609	83	1183
Lock	W. S. Jenkins	605,720	June 14	1209	279	83	1608
Lock attachment	B. J. Diplock	602,310	Apr. 12	1252	276 277	83	252
Locomotive	W. M. Russell	604,481	May 24	2325	527	83	1118
Locomotive	G. S. Strong	606,633	June 28	2964	687 688	83	1975
Locomotive-engine. Compound	W. A. Fletcher	605,413	June 7	685	152	83	1484
Locomotive. Log-hauling	G. W. Prescott	606,237	June 28	2238	514 515 516	83	1832
Locomotive. Oil-burning	C. P. Weiss	605,803	June 14	1370	314	83	1633
Locomotive sand-box	A. D. Emery	605,608	June 14	995	229 230	83	1563
Loom	G. F. Hutchins	606,553	June 28	2825	650	83	1949
Loom	J. W. Sherry	605,019	May 31	3245	746	83	1314
Loom	J. Walder	602,401	Apr. 19	1556	354	83	326
Loom	W. H. Redding	603,237	May 3	73	19	83	615
Loom for cross-weaving	J. Catterall	602,893	Apr. 26	2249	512	83	472
Loom-fork	C. N. Newcomb	605,507	June 14	880	190	83	1581
Loom frame. Carpet-	G. W. and W. R. Harris	603,080	Apr. 26	2583	586 587 588	83	584
Loom-heddles. Machine for making	T. A. B. Carver	604,299	May 17	1968	441 114	83	1033
Loom jacquard mechanism	H. Wyman	603,521	May 3	530	115	83	700
Loom Lappet-	W. Lonzo	605,561	June 14	950	221	83	1556
Loom picker-check	G. Goodline and J. A. Clark	604,897	May 31	3045	699	83	1275
Loom picking mechanism	O. A. Sawyer and M. M. Lahue	603,860	May 10	1130	254	83	836
Loom protector stop mechanism	G. F. Hutchins	605,695	June 14	1414	322 323	83	1641
Loom shedding mechanism	H. Wyman and W. H. Redding	603,308	May 3	108	26	83	622
Loom shedding mechanism	G. Oldham	603,282	May 3	66	17	83	614
Loom shedding-motion	S. M. Hamblin	603,141	Apr. 26	2094	611	83	557
Loom-shuttle	S. M. Hamblin	603,603	May 3	656	146	83	739
Loom-shuttle	L. Sturges	604,804	May 31	2890	651	83	1245
Loom-shuttle	G. Schwabe	604,669	May 24	2650	607 608	83	1180
Loom shuttle-box-operating mechanism	H. Wyman	603,522	May 3	524	116	83	701
Loom shuttle-box-operating mechanism	C. A. Littlefield	601,836	Apr. 5	400	84, 85	83	75
Loom shuttle-changing mechanism	M. H. Leveille	605,690	June 14	1161	268	83	1594
Loom-shuttle. Self-threading	A. D. Emery	605,602	June 14	908	228 229	83	1562
Loom shuttle stop-motion	J. and J. Harriman	605,199	June 7	254	59, 60	83	1399
Loom slack-alarm and stop-motion	J. H. Northrop	604,632	May 24	2595	590	83	1167
Loom thread-cutting temple	A. D. Emery	605,600	June 14	905	227	83	1561
Loom warp stop-motion	J. Harriman	605,479	June 14	777	179	83	1523
Loom warp stop-motion. Narrow-ware	A. D. Emery	605,601	June 14	909	227 228	83	1562
Loom weft stop-motion	I. E. Palmer	605,971	June 21	1723	395 396	83	1717
Looms. Fringe-making attachment for hammock-	J. K. Schumacher	602,366	Apr. 12	1343	299	83	271
Looms. Selvage-weaving device for	R. R. Thompson	602,487	Apr. 19	1549	352 353	83	334
Lounge. Box-	J. Kremser	602,457	Apr. 19	1503	343	83	315
Lowering device	A. Cruz	602,155	Apr. 12	994	217	83	200
Lubricating apparatus	C. H. C. Koch	602,854	Apr. 26	2196	498	83	462
Lubricating device	J. F. and B. T. McCanna	604,072	May 17	1553	348	83	951
Lubricating-pump	O. F. Cook	603,260	May 3	29	7	83	606
Lubricating shaft-bearings. Means for							
Lubricator: *See* Automatic lubricator. Axle-lubricator. Cup-lubricator. Hydraulic lubricator.							
Lubricator	E. O. Goss	603,686	May 10	907	178	83	774
Lubricator	G. McNeil and T. J. Rogers	606,204	June 28	2946	543	83	1855
Lubricator	W. Michalk	604,400	May 24	2181	486	83	1092
Lubricator	J. Powell	604,365	May 17	1908	427	83	1030

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Lubricator	G. Seyffarth	603,907	May 10	1365	310	83	669
Lubricator	W. H. and R. Thompson	604,132	May 17	1602	311 373 374	83	973
Lubricator-filler. Automatic	N. Zogg	603,303	May 3	258	57	83	649
Lumber-edger	H. M. Johnston and G. W. Mason	604,661	May 24	2631	606	83	1176
Lumber-piling lift	A. Stendahl	603,835	May 10	1082	241	83	806
Lumber-stacking apparatus	W. Graham	604,145	May 17	1632	378 379	83	976
Lumber-stacking apparatus	W. Graham	604,146	May 17	1636	379 380	83	977
Lumber-stacking apparatus	W. Graham	604,169	May 17	1723	388 389	83	984
Lumber-storage plant	V. L. Emerson	602,395	Apr. 12	1394	313 313	83	280
Luminous or similar effects. Apparatus for producing	D. M. Moore	604,686	May 24	2678	613	83	1186
Mail-bag	F. A. Brown	602,723	Apr. 19	1902	446	83	402
Mail-bag crane	W. L. Hatfield	604,115	May 17	1634	367	83	967
Mail-bag fastener	C. A. Strasburg	605,588	June 14	963	223	83	1558
Mail-bag lock	J. B. May	602,784	Apr. 19	2021	458	83	418
Mail-box	J. Avery	605,857	June 21	1455	333	83	1667
Mail-catcher	J. E. White	603,749	May 10	913	209	83	794
Mail-marking machine	C. P. Oudin	604,689	May 24	2683	614 615	83	1186
Mailing-signal and door-bell. Combined	C. F. Nelson	602,907	Apr. 26	2441	557	83	508
Malt-drying apparatus	W. H. Prinz	605,012	May 31	3231	743 744	83	1311
Malt-stirrer	J. A. Saladin	606,586	June 28	2880	663 664 665 666 667 668	83	1960
Malting drum. Pneumatic	J. A. Tilden	602,598	Apr. 19	1619	370	83	337
Manhole-cover	T. P. Greger	606,206	June 28	2172	408	83	1818
Manure-distributer	T. H. Motley	605,909	June 21	1720	395	83	1717
Map-holder	H. C. McCafferty	601,668	Apr. 5	70	16	83	16
Marble. Polishing	J. M. Mueller, Jr	605,395	June 7	645	144	83	1475
Marker for graves, lands, &c	J. A. Coffey	602,119	Apr. 12	915	199 200	83	185
Marker. Land	J. H. Winter	603,157	Apr. 26	2714	517	83	561
Marking-cord	G. K. Spitzenberg	602,899	Apr. 26	2265	516	83	474
Marshmallow-runner	R. W. Douglas	603,950	Apr. 26	2309	540	83	495
Massage appliance. Electric	F. J. S. Lau						
Mat: *See* Door-mat.							
Match-box	R. M. Dixon	605,276	June 7	419	95	83	1432
Match-box-filling machine	A. Lagerman	604,565	May 24	2476	562 563 564	83	1146
Match box or safe	B. W. Karst	602,338	Apr. 12	1288	285	83	260
Match-card-making machine	S. W. Bates	605,598	June 14	973	225	83	1559
Match-igniting device	C. F. and G. A. Axelson and R. W. Gunn.	602,593	Apr. 19	1736	395	83	356
Match-making machine	H. P. Feister	603,481	May 3	432	96	83	684
Match-making machine	J. P. Wright	603,459	May 3	391	87, 88	83	676
Match-safe	E. P. Connet and F. A. Green	605,856	June 21	1502	344	83	1675
Match-safe	D. Knowlton	602,694	Apr. 19	1787	408	83	368
Match-safe	J. Villard and J. P. Henderson	603,301	May 3	94	23	83	619
Match-splint cutting and assembling machine	J. F. Kay and D. Hutchinson	601,898	Apr. 5	520	107 108	83	97
Matches. Composition for making	A. Tachauer and L. Braly	603,666	May 10	777	------	83	768
Matrices. Renewing	B. Ring and B. W. Stickney	604,123	May 17	1646	369	83	969
Matrix-drying apparatus	B. F. Jackson	603,879	May 10	1163	262	83	843
Mattress	O. E. Hall	604,043	May 17	1491	335	83	940
Mattress. Sectional	W. F. Ade, Jr	603,718	May 10	859	191	83	784
Measure. Grain	F. Yeagley	603,300	May 3	111	26	83	623
Measurer and register. Grain	S. Stewart and J. F. Swisher	601,739	Apr. 5	327	45	83	44
Measuring and cutting device. Cloth	W. B. Hood	601,964	Apr. 5	965	141	83	126
Measuring diameters. Instrument for	G. Vine	601,721	Apr. 5	192	37, 38	83	38
Measuring instrument. Distance	A. G. B. Scuri	603,890	June 14	1420	324	83	1642
Measuring instrument. Electrical	H. W. Sullivan	602,567	Apr. 19	1615	369	83	337
Measuring instruments. Hinge connection for electrical	A. H. Hoyt	603,042	Apr. 26	2509	569	83	521
Measuring mechanism for box or can filling machines.	P. L. Hoyte and W. T. Wood	602,330	Apr. 12	1283	284	83	259
Meat can. Compressed	J. L. Black	601,981	Apr. 5	584	121 122	83	111
Meat-holder	J. N. and J. T. Firth	603,560	May 3	534	129	83	714
Meat or vegetable cutter	I. P. Buckles	606,511	June 28	2738	631	83	1931
Meat-pickling apparatus	G. Henkel and H. von Rom	603,082	Apr. 26	2508	599	83	535
Meat-press	F. M. McKown	602,866	Apr. 26	2210	501	83	465
Meats. Marking	A. F. Nathan	605,120	June 7	67	23	83	1269
Mechanical movement	V. Bélanger	606,157	June 21	3070	476 476	83	1781
Mechanical movement	V. Bélanger	606,158	June 21	3078	477 477	83	1781
Mechanical movement	H. F. Brammer	606,044	June 21	1865	430	83	1741
Mechanical movement	C. B. Judd	604,010	May 10	1429	330	83	808
Mechanical movement	S. T. Richardson	604,417	May 24	2193	491	83	1095
Mechanical movement	E. C. Riddle	605,015	May 31	3238	745	83	1312
Mechanical movement	L. W. Southgate	606,096	June 21	1968	451 452	83	1761
Medicine-carton	C. E. Swink	602,668	Apr. 19	1876	420	83	395
Medicine-case. Physician's	M. Hoff	603,467	May 3	402	90	83	676
Medicine-dropper	J. B. Schermerhorn	603,973	May 10	1313	301	83	971

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Medicines. Device for administering	C. C. Hooker	604,998	May 24	2147	488	83	1099
Merry-go-round	W. E. Meissner	603,589	May 3	628	140	83	723
Metal-dishing machine	J. S. Worth	603,094	Apr. 26	2610	508	83	539
Metal-dishing machine	W. P. Worth	603,095	Apr. 26	2612	508	83	539
Metal-dishing machine	J. S. Worth	603,096	Apr. 26	2617	504	83	540
Metal dishing or forming machine	J. T. Wainwright. (Reissue)	603,096	Apr. 26	2614	508	83	540
Metal. Machine for exhausting molten	G. Mesta	11,671	June 21	2116	486	83	1700
Metal plates. Motor in apparatus for pickling and washing	J. Williams and G. H. White	602,686	Apr. 19	1905	432 434	83	391
Metal plates or sheets. Apparatus for separating	W. J. Dwyer	602,969	Apr. 26	2396	546 547	83	500
Metal-separator	R. E. Daniels	603,133	Apr. 26	2678	607 608	83	554
Metal shearing and bending machine	B. Wesselmann	603,813	May 10	1084	230	83	618
Metal-shearing machine	F. B. Shuster	606,106	June 21	1966	456	83	1766
Metal straightening and cutting-off machines. Device for	T. Conners	605,928	June 21	1633	376 376	83	1701
Metal ware. Apparatus for shaping	F. G. Echols	601,895	Apr. 5	383	81	83	73
Metal-working machines	N. V. Perry	603,028	Apr. 12	815	177	83	165
Metal-working machine	R. W. Lord	603,994	May 10	1365	300	83	880
Metal-working machines. Work-holder for	F. Egge	603,095	Apr. 26	2487	564	83	516
Metal-working tool	J. D. Bishop	604,376	May 24	2125	477	83	1092
Metals. Apparatus for electrically working	W. H. Hardy	604,137	May 17	1670	375	83	973
Metals. Tool and holder for use in cutting, boring, and slotting	W. A. McCool	605,422	June 7	609	155	83	1487
Metallic articles. Manufacturing cold-drawn	C. Rudolph and G. Levavasseur	602,417	Apr. 12	1490	323	83	268
Metallic pipe. Flexible	T. L. Stewart	605,587	June 14	962	223	83	1558
Metallic strips. Tool for cutting and binding	L. Parvillée	605,761	June 14	1277	294	83	1615
Metalloceramic resistances. Fabricating	J. Manes	602,227	Apr. 12	1112	------	83	224
Metallurgical furnace		602,761	Apr. 19	2017	457 458	83	412
Meter: *See* Coin-controlled meter. Current-meter. Electric meter. Fluid-meter. Gas-meter. Gas-supply meter. Motor-meter. Oscillating meter. Water-meter. Wattmeter.							
Meter coin-controlling and recording mechanism	S. E. Mower	604,175	May 17	1747	393 394	83	990
Meter-coupling protective device	C. Ennis	602,988	Apr. 26	2419	551	83	504
Meter prepayment attachment	C. Luke	604,255	May 17	1866	498	83	1016
Meter prepayment attachment	S. E. Mower	604,173	May 17	1739	398 398	83	989
Meter-reading attachment	C. L. Arques	604,953	May 31	3137	721	83	1293
Meter registering mechanism	S. E. Mower	604,174	May 17	1745	398	83	990
Meter-testing device	F. Lambert	603,455	May 3	441	99	83	686
Middlings-purifier	H. Simon	601,817	Apr. 5	370	77	83	70
Milk. Apparatus for determining fat in	A. W. Stokes	603,780	Apr. 19	2051	464	83	419
Milk-can	E. Wiart	602,675	Apr. 19	1668	429	83	367
Milk-cooling apparatus	L. H. Porter	602,956	Apr. 26	2378	542	83	497
Milk hygienically. Apparatus for treating	W. F. Niebling	604,177	May 17	1751	395 494	83	991
Milk measuring and discharging machine	W. E. Penn	604,951	May 17	1803	495 495	83	1017
Milk. Preserving	A. Fernandez	602,315	Apr. 12	1263	279	83	255
Milker. Cow	R. D. Roth	603,049	Apr. 26	2521	573	83	523
Milking apparatus	O. R. Hauskey	603,616	May 3	660	154	83	734
Mill: *See* Ball-mill. Crushing-mill. Grinding-mill. Rolling-mill. Stamp-mill. Stamping and crushing mill. Windmill.							
Milling-cutter	A. H. Morton	604,776	May 31	2847	651	83	1236
Milling-cutter	L. Smith	602,089	Apr. 5	780	169	83	147
Milling-cutter for metal-working machines	A. Klay	602,291	Apr. 12	1226	270	83	246
Mineral waters. Apparatus for making and dispensing	P. E. Malmstrom	602,809	Apr. 26	2393	522	83	478
Mineral wool	D. P. Doak	605,042	May 31	3236	------	83	1321
Mining apparatus	G. F. Kibling	604,380	May 17	2089	454	83	1043
Mining-machine	D. A. and T. E. Lee	601,971	Apr. 5	675	143	83	128
Mining-machine	E. S. and W. A. McKinlay	604,192	May 17	1775	400	83	995
Miter cutting and shooting block	W. O. Bailey	604,290	May 17	1949	487	83	1088
Miter cutting and shooting block	W. O. Bailey	604,291	May 17	1951	487	83	1088
Mixer: *See* Feed-mixer. Gas-mixer.							
Mixer	T. A. Edison	605,668	June 14	1121	259	83	1566
Mixing-machine	J. H. Day	604,734	May 31	2781	686	83	1293
Moistening and sealing envelops. Machine for automatically	J. Dupaw	602,601	Apr. 19	2102	474	83	438
Moistening device	J. J. Karges	603,768	May 10	947	211	83	801
Mold: *See* Glass-mold.							
Molding-flasks. Hand clamping device for	J. Scherer	605,347	June 7	568	124	83	1460
Molding-machine	W. B. Burns	603,423	May 3	311	70	83	660
Molding machine. Sand	J. D. Duckett and W. Badger	603,927	May 3	44	11, 12	83	609
Molding-machines. Guide and guard for variety	A. L. Stoddard	604,946	May 31	3127	719	83	1291
Mole-trap	W. M. Ball	602,818	Apr. 26	2141	488	83	451
Monkey-wrench. Ratchet	C. E. Frederickson	605,444	June 7	737	164	83	1488
Mop	H. A. Wolff	605,495	June 28	2711	624	83	1927
Mop-head	D. E. Ballam	603,999	May 10	1308	311 312	83	959
Mop-holder	H. A. L. Bade	604,107	May 17	1680	364	83	985
Mop holder and wringer	O. Kurz	605,951	June 21	1710	368	83	1714
Mop-wringer	H. A. Wolff	603,547	May 3	564	124	83	710
Mop-wringing attachment for pails	F. Trimble	605,368	June 7	506	120	83	1465

Motion. Device for converting	A. Hadsall	604,396	May 31	2283	669	83	1251
Motion. Device for converting	G. R. Laidlaw	605,553	June 14	891	208	83	1545
Motion. Mechanism for converting rotary to reciprocating	J. W. Butterfield	605,218	June 7	308	99, 70	83	1409
Motive engine	A. Howard	602,161	Apr. 12	1008	290	83	208
Motor: *See* Current induction-motor. Electric motor. Fluid-pressure motor. Gas-motor. Pneumatic motor. Powder-motor. Rotary motor. Steam-motor. Tide and wave motor. Vehicle-motor. Water-motor. Wave-motor. Wave or current motor.							
Motor	P. Auriol	602,652	Apr. 19	1634	418	83	377
Motor	F. A. Brennan	605,262	June 7	624	139	83	1471
Motor	H. Clay	608,173	Apr. 26	2735	623	83	565
Motor	J. F. W. Koetter	605,439	June 7	721	162	83	1469
Motor	F. M. Mackey	602,086	Apr. 12	856	{185 / 187}	83	174
Motor	J. A. Möllinger and K. Kurda	606,630	June 28	2960	686	83	1974
Motor-meter. Alternating-current	J. Hallé	602,008	Apr. 5	728	{155 / 156}	83	136
Moving way or stair for transporting persons and goods	T. S. Brown	604,851	May 31	2967	660	83	1250
Mower	A. Hart	605,874	June 21	1598	{352 / 353}	83	1660
Mower	J. Macphail	604,901	May 31	3054	{701 / 702}	83	1276
Mower	T. Naus	604,779	May 31	2853	658	83	1237
Mower attachment	S. S. Dennis and T. F. Thorn	602,734	Apr. 19	1982	450	83	405
Mower cutting apparatus	P. C. Burhans	605,074	June 7	12	4	83	1355
Mower. Lawn-	W. W. Crockett	605,176	June 7	213	52	83	1391
Mower. Lawn-	H. W. Morgel	602,513	Apr. 19	1596	{354 / 365}	83	338
Mower. Lawn-	N. P. Shulin	606,927	June 21	1631	375	83	1701
Mower. Lawn-	J. A. Davis	604,189	May 17	1770	399	83	994
Mowing and reaping machines. Rotary sickle for	D. W. Kneisly	604,358	May 17	2061	466	83	1054
Mowing-machine	O. Morris	602,586	Apr. 19	1715	390	83	254
Mowing-machine	H. R. Stirling	601,911	Apr. 5	557	114	83	106
Mowing-machine	A. N. Allen	606,111	June 21	1993	457	83	1707
Mucilage-holder	R. H. Reid	606,259	June 28	2474	575	83	1879
Mud-guard	G. Gordon	606,185	June 21	2037	466	83	1774
Mud-guard and storm-fender. Reversible	S. Green	604,562	May 24	2472	562	83	1146
Mule-carriages. Dash-pot for steadying	W. O. and E. K. Campbell	601,727	Apr. 5	200	39	83	59
Music-chair	C. Gittus, Jr	604,825	May 31	2020	{668 / 669}	83	1250
Music-leaf turner	R. E. Swartz	606,258	June 28	2277	526	83	1841
Music-leaf turner	L. Wysinger	606,110	June 21	1991	457	83	1707
Music-leaf turner	A. J. Smetters	601,736	Apr. 5	221	44	83	45
Music or book holder and rack	E. W. Funk	606,259	June 21	1708	391	83	1714
Music or copy holder	C. A. Comp	601,644	Apr. 5	33	7, 8	83	8
Music-turner	B. C. Auten	604,954	May 31	3138	{721 / 722}	83	1298
Music turner. Sheet-	P. Casolin	602,695	Apr. 19	1919	437	83	398
Musical instrument	T. H. Deckert	605,041	May 31	3245	754	83	1321
Musical instrument	F. G. McPherson	602,352	Apr. 12	1316	298	83	266
Musical instrument	M. E. Verdier	602,948	Apr. 12	1146	251	83	230
Musical-instrument attachment	G. H. Davis	606,279	June 28	2316	{596 / 597}	83	1650
Musical instrument. Electromechanical	A. Richter	605,134	June 7	120	30, 31	83	1374
Musical instrument. Mechanical	W. Gustafson	606,207	June 28	2173	499	83	1819
Musical-instrument picker device. Stringed-	C. B. Kendall and J. P. Tirrell	606,220	June 28	2200	507	83	1827
Musical-instrument picker device. Stringed-	W. A. Lorenz and C. E. De Lue	606,222	June 28	2213	{508 / 509}	83	1827
Musical-instrument pneumatic action	C. B. Kendall	606,219	June 28	2207	{506 / 507}	83	1826
Musical-instrument strings. Pin or peg for	C. Gittus	605,043	May 31	3287	753	83	1321
Musical-instrument tailpiece	R. E. Lackner	602,337	Apr. 12	1205	297	83	261
Musical instruments. Finger-guide for	P. Marcuson	602,802	Apr. 26	2205	500	83	464
Musk. Making artificial	C. Schmid	602,961	Apr. 26	2385	.....	83	499
Myrioscope. Automatic	A. Peterson	606,236	June 28	2227	514	83	1822
Nail-machine	J. A. Staples and C. Bush	602,024	Apr. 5	752	162	83	142
Nail machine. Wire-	G. W. Angell	604,908	May 17	1795	404	83	999
Nail-making machine	J. C. Richardson	602,566	Apr. 19	1678	{381 / 382}	83	348
Nail-making machine	E. Walton and F. Macke	604,553	May 24	2455	556	83	1141
Nail-setting machine	A. M. Simmons	602,575	Apr. 12	1190	261	83	230
Nailing apparatus	M. Brock	601,941	Apr. 5	620	132	83	116
Nailing apparatus. Hand	M. Brock	601,942	Apr. 5	633	133	83	116
Nailing-machine work-support	L. A. Casgrain	606,045	June 21	1866	430	83	1741
Napkin ring and holder. Combined	G. Kroker	605,487	June 14	798	{161 / 162}	83	1585
Necktie	C. W. T. Davies	605,947	June 21	1676	383	83	1708
Necktie-fastener	H. W. Buehler	604,265	May 24	2710	474	83	1079
Necktie-fastener	W. E. Catlin	606,122	June 21	2011	460	83	1770
Necktie-fastener	B. H. Holmes	604,048	May 17	1490	357	83	948
Necktie-fastener	I. H. Mallin	606,236	Apr. 26	2247	549	83	555
Necktie-fastener	F. H. Maxam	602,502	Apr. 19	1673	380	83	347
Necktie-holder	C. E. Sipp	605,268	June 7	206	60	83	1427
Neckties and collars to shirts. Means for fastening	E. P. McAllister	606,370	June 28	2555	556	83	1956
Needle. Puncture-repair	E. Strain	602,852	May 10	1049	254	83	231
Needle. Split	F. M. Johnson	604,760	May 31	2821	644	83	1231
Needle. Tagging							

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Nest-box for beneries	A. J. Silberstein	605,979	June 21	1726	399	83	1720
Newspaper folding and wrapping machine	F. Waite and J. Saville	601,741	Apr. 5	220	45, 46	83	44
Newspapers against resale. Means for protecting	L. C. Crowell	608,896	Apr. 26	2255	{513 / 514}	83	473
Nickel from nickel ores. Extracting	T. Storer	603,797	May 10	1000	.....	83	812
Nitrocellulose. Purifying	J. H. Stevens	605,981	June 21	1640	.....	83	1708
Noria	R. F. Gray	601,957	Apr. 5	656	138	83	133
Note-reading device. Vocal and instrumental	E. G. Wickersham	605,157	June 7	162	45	83	1395
Nozzle	H. Nicholsburg	606,049	May 31	3298	757	83	1394
Nozzle. Spraying	J. and R. Bean	604,873	May 31	3010	691	83	1268
Nozzle. Water-pipe or hose	E. G. Odonnell	608,487	May 3	444	99	83	687
Nursery-gate	P. Motley	304,411	May 24	2185	492	83	1094
Nut	R. R. Parrish	605,450	June 7	738	167	83	1495
Nut and nut-lock	H. A. Hutson	605,578	June 14	930	219	83	1554
Nut and pipe wrench. Combined	O. Larson and C. Branzell	601,970	Apr. 5	674	149	83	127
Nut. Bolt-	W. H. Butler	602,794	Apr. 19	1963	446	83	408
Nut-lock	N. Baughn	602,715	Apr. 19	1952	443	83	400
Nut-lock	G. E. Benton	605,511	June 14	1383	317	83	1635
Nut-lock	F. Binn	606,288	June 28	2431	559	83	1866
Nut-lock	J. Breegman	602,891	Apr. 26	2347	511	83	471
Nut-lock	C. H., Jr., and J. F. Charlton	605,078	June 7	17	6	83	1356
Nut-lock	P. Curran	605,859	June 21	1507	345	83	1670
Nut-lock	J. Doran	605,861	June 21	1509	346	83	1677
Nut-lock	J. H. Eckart	603,394	May 3	140	33	83	620
Nut-lock	B. Edgar	602,233	Apr. 12	1102	246	83	225
Nut-lock	B. Edgar	602,394	Apr. 12	1302	312	83	280
Nut-lock	J. C. Ferguson	602,619	Apr. 19	1775	405	83	366
Nut-lock	W. A. Garrigus and R. Golling	604,114	May 17	1633	366	83	967
Nut-lock	J. Harris	601,889	Apr. 5	512	106	83	96
Nut-lock	I. Hosier	606,145	June 21	2056	471	83	1778
Nut-lock	F. O. Johnson	605,786	June 14	1343	307	83	1627
Nut-lock	P. B. Kenyon	603,519	May 10	1045	233	83	821
Nut-lock	C. J. McCue	605,534	May 3	546	120	83	706
Nut-lock	J. Rohlin	606,568	June 28	2874	662	83	1959
Nut-lock	J. B. Sargent	603,050	Apr. 26	2523	573	83	532
Nut-lock	H. E. Stagman and H. C. Jones	602,919	Apr. 26	2306	525	83	488
Nut-lock	W. W. Sweigart	606,253	June 28	2279	526	83	1842
Nut-lock	S. W. Telford	601,688	Apr. 5	118	23	83	35
Nut-lock	H. A. Thomasson	603,247	May 3	181	41	83	637
Nut-lock	J. R. Thurmend	601,915	Apr. 5	562	116	83	107
Nut-lock	J. F. Titus	603,670	May 10	1656	378	83	770
Nut-lock	B. Woodall and T. E. Orr	602,549	Apr. 19	1656	378	83	344
Nut-lock	A. S. Wright	602,120	Apr. 12	917	200	83	186
Nut-lock	J. Wurthner	606,109	June 21	1990	457	83	1707
Nut-lock	B. Edgar	602,232	Apr. 12	1118	245	83	225
Nut. Lock-	H. F. Gardner and F. J. Benscoter	603,693	May 10	804	177	83	774
Nut. Lock-	G. Weiss	604,447	May 24	2249	{505 / 506}	83	1106
Nut-tapping machine	H. L. Butler	602,054	Apr. 12	904	174	83	164
Nut-wrench	E. P. Conway	606,047	June 21	1809	451	83	1749
Nut wrench. Axle-	T. H. Brosnihan	604,001	May 24	2537	578	83	1158
Oar. Bow-facing	A. Dalmer	603,308	May 3	266	59	83	651
Oar. Bow-facing	T. B. Floyd	606,055	June 21	1865	434	83	1746
Office-indicator	A. Haye	604,321	May 17	2013	451	83	1041
Oil, &c. Apparatus for dispensing	E. Stretch	606,423	June 28	2614	608	83	1908
Oil by water-pressure. Means for raising	H. C. Atkinson	604,184	May 17	1763	397	83	992
Oil-can	W. R. Goodwin	604,386	May 24	2187	480	83	1084
Oil-can	L. Martin	601,797	Apr. 5	332	67	83	63
Oil-can	J. H. Nichol	604,479	May 24	2316	{535 / 536}	83	1117
Oil-distributing apparatus	A. Collier	604,270	May 24	2115	475	83	1060
Oil-extractor and feed-water purifier and heater	W. F. Trotter	602,297	May 3	88	22	83	618
Oil or gas engine	N. Guyer, J. P. Kelly, and A. Kissell	603,965	May 10	1329	305	83	875
Oil-tanks. Automatic cut-off for	W. G. Day and R. M. Glacken	604,307	May 17	1901	447	83	1087
Oils and fats. Treating	J. Lines	605,321	June 7	501	111	83	1448
Oiler	T. W. Green	601,649	Apr. 5	45	9	83	10
Oiler for shafts of pressure-blowers	J. S. Scarborough	606,808	June 28	2360	546	83	1858
Oiling device	E. B. Meyrowitz	603,148	Apr. 26	2708	{613 / 614}	83	559
Optical instruments. Adjustable support for	E. A. Trussell	604,005	May 17	1594	358	83	959
Order-holder	D. Vickers and G. T. Buckham	602,785	Apr. 19	2061	{467 / 468}	83	421
Ordnance. Breech-loading	M. A. Lynch and W. I. Hough	604,665	May 24	2637	{604 / 605 / 606}	83	1177
Ordnance breech mechanism	L. W. Bates	605,841	June 21	1462	335	83	1666
Ordnance. Method of and apparatus for firing pneumatic	W. E. Mendenhall	604,061	May 17	1530	{344 / 345}	83	947
Ore-concentrator	E. M. Rich	604,920	May 31	3092	710	83	1284
Ore-concentrator	F. W. Harlow	606,126	June 21	2041	{467 / 468}	83	1775
Ore concentrator and slimer. Combined	H. Harlan	602,400	Apr. 12	1407	317	83	293
Ore-roasting furnace	A. W. Patterson	601,815	Apr. 5	506	76	83	69
Ore-separator	J. Ancel	602,250	Apr. 12	1148	252	83	231
Ore-sorter	A. Etard	601,640	Apr. 5	98	.....	83	7
Ores containing gold, silver, or copper. Treating	W. M. Morgan and F. E. Parker	605,001	May 31	2909	{739 / 740}	83	1307
Ores. Process of and apparatus for roasting and separating	S. C. C. Currie	604,167	May 17	1781	.....	83	994
Ores. Treating metallic	J. E. Davis	605,404	June 7	669	146	83	1461
Organ	M. Clark	606,175	June 21	2105	484	83	1768
Organ coupler. Pneumatic	M. Clark	606,444	June 28	2632	605	83	1911
Organ coupler. Pneumatic	E. M. Skinner. (Reissue)	11,669	June 14	1448	{331 / 332}	83	1646
Organ. Pipe	M. Clark	602,936	Apr. 26	2344	535	83	491
Organ. Pneumatic							

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Organ. Pneumatic	M. Clark	603,127	Apr. 26	2066	606	83	552
Organ. Reed	W. S. Moses	604,070	May 17	1546	347	83	960
Orthopedic appliance	A. H. Hamel and A. N. Hibbert	604,044	May 17	1498	385	83	940
Orthotoluenesulfo-chlorid. Purifying	W. Majert	603,195	Apr. 26	2776	.....	83	572
Oscillating meter	R. A. Thayer and E. Everett	605,901	June 28	3910	672	83	1965
Oven. Baker's	W. Neuhs	605,900	June 21	1576	362	83	1691
Overalls	C. G. Smith	605,286	June 7	330	76, 77	83	1414
Overalls, leggings, trousers, &c. Attachment for	G. G. Blane	602,299	Apr. 12	1236	272	83	249
Overhead switch	J. S. Rice and F. W. Bettenmiller	604,386	May 17	1910	427	83	1021
Overshoe	L. E. Campbell	604,367	May 24	2,112	474	83	1080
Overshoe attachment	J. C. Gillam	606,201	June 28	2155	494	83	1816
Oxydiamidodiphenyl and making same	P. Jacobson and H. Tigges	604,049	May 17	1500	.....	83	942
Oxyethylacetanilid	O. Klimmek	606,288	June 28	2237	.....	83	1868
Oxyphenyl-guanidin and making same	B. R. Seifert	605,977	June 21	1734	.....	83	1719
Pack and sled. Combined	J. J. Erb	604,523	May 24	2305	544	83	1190
Package filling, weighing, and assorting machine	A. Stearns	603,413	May 3	293	63, 68	83	656
Package. Shipping	E. Norton	603,466	Apr. 19	1517	346	83	816
Packing-box	N. G. Sörensen	602,976	Apr. 12	1191	262	83	239
Packing. Metallic	N. Jessup	604,474	May 24	2309	524	83	1116
Packing. Metallic	W. H. Prendergast	602,736	May 10	898	198	83	700
Packing-ring	S. F. Field and W. T. Heck	603,376	May 3	225	50	83	644
Packing. Rod	T. H. Holmes	602,328	Apr. 12	1281	284	83	258
Packing. Steam	C. H. Merwarth	605,891	June 21	1564	360	83	1689
Packing. Steam-engine rod	C. Longstreth	603,586	May 3	627	139 140	83	722
Pad: *See* Harness-pad. Stamp-pad. Heof-pad. Step-pad. Horseshoe-pad. Truss-pad.							
Paddle-wheel. Steamboat	L. Q. C. Magee	604,256	May 17	1867	423	83	1016
Padlock	C. H. Brigden	604,577	May 24	2499	568	83	1150

Paintings. Producing copies of oil							
Pan: *See* Dust-pan. Roasting-pan. Frying-pan. Vacuum-pan.							
Pan-lifter	A. Hautsch	602,304	Apr. 12	1275	262	83	257
Panel	A. R. Lordly	603,147	Apr. 26	2701	613	83	559
Paper and compound used to enamel same. Enameled	F. G. Annison	601,927	Apr. 5	578	.....	83	110
Paper. Apparatus for making yarn or thread from	E. Claviez	604,350	May 17	2077	465	83	1053
Paper assembling and stapling machine	T. C. Dexter	602,816	Apr. 19	2128	480 481 482 483 484 485	83	433
Paper-bag cabinet	P. F. Mauer	602,092	Apr. 5	770	166	83	146
Paper box	E. Finch	604,081	May 17	1471	329	83	936
Paper box	H. S. Munson	602,664	Apr. 19	1868	425	83	364
Paper-box machine	J. W. Low	603,471	May 3	407	91, 92	83	679
Paper-box-making machine	C. H. Palmer and J. W. Denmead	602,140	Apr. 12	948	207 208	83	191
Paper-box-making machine	J. H. Russell	604,546	May 24	2441	554 555	83	1136
Paper cabinet. Toilet	J. N. Moehn	602,995	Apr. 26	2430	556	83	807
Paper cutter. Toilet	J. Hoberg, Sr	604,150	May 17	1603	361	83	978
Paper cutting and folding machine	E. H. and C. P. Cottrell	604,004	May 10	1415	316 317 318 505	83	896
Paper-cutting machine	S. Smith	602,882	Apr. 26	2233	506	83	469
Paper decoration	R. Burger	603,619	May 10	897	155	83	752
Paper-drying apparatus	G J. Burns	602,799	Apr. 19	2099	474	83	427
Paper-feeding machine	J. M. Blaisdell	604,932	May 31	3035	697	83	1273
Paper-feeding machine	T. C. Dexter	605,086	June 7	23	11, 12	83	1359
Paper-feeding machine	T. C Dexter	605,090	June 7	37	12, 13	83	1360
Paper-feeding machine	J. F. McNutt	605,328	June 7	511	114	83	1430
Paper-folding device. Toilet	W. E. Coombs	602,595	Apr. 19	1783	394	83	357
Paper-folding machine	H. K. King	602,990	Apr. 26	2430	554	83	806
Paper-holder	G H. Kent	602,186	Apr. 12	1060	220	83	211
Paper-holding device	J. W. Bush	603,316	May 3	119	26	83	685
Paper-making machine	S. N. Miller	602,197	Apr. 26	2778	633	83	572
Paper or other machines. Lath-carrying device for wall	J. H. Suydam, Sr	602,375	Apr. 12	1356	309	83	973
Paper. Oval holder for toilet	J. N. Moehn	604,774	May 31	2645	620	83	1395
Paper-registering machine	T. C. Dexter	602,998	Apr. 26	2260	514 515 516	83	474
Paper-registering machine	T. C. Dexter and J. J. Parker	605,275	June 7	417	94	83	1431

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Paper-serving machine	C. Fisher	604,113	May 17	1630	366	83	966
Paper thread. Making	E. Claviez	604,349	May 17	2075	464 465	83	1053
Paper-trimming machine. Wall	J. M. Brady	602,253	Apr. 12	1153	253	83	232
Paper-tube-forming machine	F. S. Barus	606,402	June 28	2551	591	83	1803
Paper-tube-making machine	F. Schoettle	604,090	May 17	1567	356 357	83	968
Paper-tube-refolding machine	H. R. Corkhill, Jr	605,053	May 31	3305	759	83	1225
Paper. Waterproof	A. Herzheim	602,538	Apr. 19	1669	.....	83	346
Parachute	C. C. Frost	604,976	May 31	3169	730	83	1909
Paramidophenol. Making salts of	I. Roos	603,109	Apr. 12	900	.....	83	183
Parcel-carrier	D. J. McCarthy	606,571	June 28	2657	658 659	83	1956
Partition-frame	W. F. Kearns	603,402	May 3	272	61	83	659
Partition. Metallic	G. Fugman	601,873	Apr. 5	490	101	83	91
Pasteurizing and sterilizing milk, &c. Apparatus for	O. B. Schier	605,920	June 21	1621	373	83	1699
Pattern. Adjustable skirt	A. A. Pinkham	603,471	Apr. 19	1529	347 348	83	821
Pattern-exhibitor	A. Peterson	606,325	June 28	2236	514	83	1881
Pea-shelling machine	J. H. Empson	604,377	May 24	2126	477	83	1088
Peanut-vending case	C. O. Luce	604,994	May 31	3201	737	83	1305
Peel. Baker's	C. Knebel	604,619	May 24	2564	585	83	1164
Pen and pencil holder	J. Dierks, (by judicial change of name now J. Bernard.)	604,026	May 17	1463	338	83	995
Pen. Drawing	F. Lutterberg	602,165	Apr. 12	1009	221	83	208
Pen. Fountain	D. W. Beaumel	603,463	May 3	396	89	83	677
Pen. Fountain	W. P. Couper	602,829	Apr. 26	2158	499	83	555
Pen. Fountain	G. S. Parker	606,231	June 28	2230	513	83	1880
Pen. Fountain	G. A. Spies	603,833	May 10	1079	241	83	895
Pen. Fountain	L. E. Waterman	604,690	May 24	2087	615	83	1187
Pen. Fountain	J. Weeks	605,085	May 31	3274	752	83	1319
Pen. Fountain	O. Winkler	605,804	June 14	1371	315	83	1583
Pen. Fountain	C. J. Renz	606,360	June 28	2475	575	83	1879
Penholder fountain attachment	M. C. Worth	608,097	Apr. 26	2616	594	83	540
Pen reservoir attachment	W. Painter	602,355	Apr. 12	1322	294	83	395
Pencil	R. H. Toquet	605,657	June 14	1108	254	83	1568
Pencil	N. D. Ingram	605,674	June 14	1134	263	83	1589
Pencil-case and comb-case. Combined	W. E. E. Smith	606,095	June 21	1902	451	83	1761
Pencil-holder	B. B. Goldsmith	603,188	Apr. 26	2748	625 626	83	568
Pencil. Magazine lead	W. P. Huffman	606,551	June 28	2823	650	83	1949
Pencil rubber attachment	L. Stoecker	606,036	June 21	1849	426	83	1739
Pencil-sharpener	I. Cory	604,731	May 31	2776	635	83	1923
Pencil-sharpener. Duplex	F. W. Warren	605,440	June 7	723	163	83	1492
Pencil-splicer	F. Baginski	603,419	May 3	304	69	83	658
Pendulum-escapement	L. Erikson	602,635	Apr. 19	1807	408	83	372
Pendulum-escapement	W. H. English	606,451	June 28	2645	608	83	1913
Perambulator	J. P. Hartman	606,139	June 21	2045	468 469	83	1776
Percussion-drill	J. H. Morris	601,975	Apr. 5	681	144 145	83	129
Permutation-lock	L. F. Biesmeyer	604,958	May 31	3143	728	83	1294
Pessary	A. M. Longshore-Potts	606,565	June 28	2848	656	83	1954
Pessary	J. W. Scroggs	602,777	Apr. 19	2047	468	83	418
Pessary	W. I. Ohmer	604,781	May 31	2855	659	83	1238
Petroleum-burner	H. Wolf	604,290	May 17	1932	432 433	83	1025
Petroleum, &c. Process of and apparatus for refining crude	E. T. Kervick	604,236	May 17	1848	414	83	1008
Pew-guard	T. A. Edison	605,667	June 14	1119	258	83	1586
Phonograph	L. B. Hinman	603,878	May 10	1168	262	83	842
Photograph-holder	R. W. Vining	606,318	June 28	2392	553 554	83	1865
Photographs. Automatic apparatus for taking	G. Selle	604,969	May 17	1914	.....	83	1021
Photographs in natural colors	E. F. Gennert	603,427	May 3	319	72	83	661
Photographic dark rooms. Candle-lamp for	H. B. Carlton	605,345	June 7	350	80	83	1418
Photographic finder	N. Bouvang	603,936	May 10	1260	287	83	861
Photographic opaque negative and printing therefrom	F. A. Brownell	604,455	May 24	2264	508	83	1109
Photographic-plate holder	J. Schaub	603,973	May 10	1312	301	83	871
Photographic-plate holder for three-color processes	G. Selle	604,208	May 17	1914	438	83	1021
Photographic-print washer	W. H. Leigh	605,229	June 7	328	74	83	1413
Photographic-printing apparatus	A. Schwarz	601,882	Apr. 5	504	104	83	95
Photographic-printing apparatus	A. Schwarz	601,883	Apr. 5	506	104	83	95
Photographic-printing frame	E. W. Sweigard	603,713	May 10	951	189	83	783
Photographic retouching-table	W. E. Harding	603,765	May 10	943	211	83	800
Piano	W. M. Bauer	604,166	May 17	1718	387	83	988
Piano	J. Dierdorf	602,681	Apr. 19	1895	431 432	83	886
Piano fall-board	W. F. Kracht	602,808	Apr. 19	2112	476	83	420
Pianoforte-action	L. A. Barber	604,136	May 17	1669	375	83	973
Pianoforte transposing mechanism	E. H. Gigney	604,144	May 17	1681	378	83	976
Piano-player. Electropneumatic	F. R. Goolman	603,184	Apr. 26	2759	626 627	83	566
Piano sounding-board	W. F. Leonhardt	602,992	Apr. 26	2434	550	83	507
Piano-tone-modifying attachment	J. C. King	602,135	Apr. 12	939	205	83	190
Piano-tuning apparatus	J. B. Dayfoot	602,499	Apr. 19	1566	356	83	326
Piano-tuning-pin holder	J. Dierdorf	602,680	Apr. 19	1894	431	83	886
Pianos. Device for correcting sounding-boards in upright	R. E. Letton	605,739	June 14	1518	283	83	1604
Pianos. Stringing	C. S. Weber	606,179	June 21	2110	485	83	1769
Picker: *See* Fruit-picker.							
Picker-stick	J. Begins	602,297	Apr. 12	1235	271	83	246
Picture-frame	M. Heraskovits	605,281	June 14	1402	321	83	1665

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Picture-frame and match safe or receptacle. Combined	J. V. Christl	606,021	June 28	2945	662	83	1973
Picture-hanger	S. Lord	603,146	Apr. 26	2701	618	83	555
Pie or cake cooler	M. M. Cormeny	602,730	Apr. 19	1975	448	83	405
Pie-rack	J. H. Burns	605,473	June 14	767	176	83	1321
Pier. Foundation-	B. F. Williston	603,854	May 3	188	43	83	638
Pile-cutting machine. Weft-	J. B. Daymont	606,405	June 28	2567	{592 / 593}	83	1895
Piled-fabric-cutting apparatus	J. Platt	603,224	Apr. 26	2821	645	83	561
Pile fabrics. Apparatus for cutting double-	R. Richter	604,701	May 24	2714	{620 / 621}	83	1192
Pillow-block	W. J. Daly	601,769	Apr. 5	263	56	83	54
Pin: *See* Clothes-pin. Safety-pin. Hat-pin.	H. Wagner	601,917	Apr. 5	565	117	83	107
Pincers. Farrier's							
Pipe: *See* Drainable pipe. Tobacco-pipe. Metallic pipe.							
Pipe and bar cutting tool	E. Fortaner	606,120	June 21	2094	463	83	1778
Pipe and flue cleaner	T. H. Kane	606,013	June 21	1808	417	83	1731
Pipe. Apparatus for manufacturing	P. Boyd	606,159	June 21	2075	{477 / 478}	83	1789
Pipe-bending apparatus	R. Clarke	604,081	May 17	1455	336	83	988
Pipe-binder	C. L. Pinney	603,455	May 3	371	88	83	672
Pipe-coupling	A. J. Avery	603,730	May 10	803	192	83	785
Pipe-coupling	A. J. Avery	603,731	May 10	864	192	83	785
Pipe-coupling	W. W. Edwards	604,857	May 31	2986	685	83	1203
Pipe-coupling	F. A. Phelps, Jr	604,159	May 17	1708	395	83	961
Pipe-coupling	J. H. Glauber	606,526	June 28	2799	645	83	1944
Pipe-coupling for broken water-closet bowls	M. J. Hoey	603,190	Apr. 26	2767	631	83	571
Pipe couplings. Automatic dust-guard for train-	D. S. Grant	606,598	June 28	2801	646	83	1944
Pipe-cutter	C. W. A. Koelkebeck and J. K. Smith	604,664	May 24	2695	604	83	1177
Pipe cutting and expanding machine	T. F. Dwyer	603,180	Apr. 26	2745	635	83	567
Pipe-hanger	T. B. Sauer	603,284	May 10	1289	291	83	856
Pipe-hanger	G. Hoyer	604,993	May 31	2996	686	83	1205
Pipe-joint	T. F. Hammer	605,009	June 7	55	17	83	1308
Pipe-joint and union	C. H. Snedeker	603,663	May 10	799	170	83	705
Pipe or tube cutter	A. J. Bramlette	602,901	Apr. 12	1240	273	83	249
Pipe slitter and perforator	C. M. and C. E. Kemp	603,289	Apr. 12	1223	269	83	246
Pipe-testing machine	P. V. Dwyer	601,709	Apr. 5	174	38	83	34
Pipe-thimble	L. T. Houghton and W. H. Buxton	605,640	June 14	1073	246	83	1577
Pipe-thimble	A. E. Brockett	605,441	June 7	728	163	83	1498
Pipe-wrench	T. J. Fowler	604,586	May 24	2390	546	83	1131
Pipe-wrench	J. W. Lind	602,940	Apr. 12	1297	286	83	261
Pipe-wrench	J. E. McDonald	606,572	June 28	2956	650	83	1956
Pipe-wrench	J. G. Newell	605,901	June 21	1577	362	83	1691
Pipe-wrench	T. M. Righter and G. Jeffryes	602,220	Apr. 12	1115	245	83	224
Pipe-wrench	L. C. Springer	602,590	Apr. 19	1721	392	83	355
Pipe-wrench	A. Werts	604,582	May 24	2506	570	83	1152
Pipes, &c. Covering-plate for channels for	D. Grove	605,146	June 7	165	41	83	1322
Pipette	A. W. Stokes	605,430	June 7	708	158	83	1469
Pistol. Ammonia and water	A. F. Humphrey	606,498	June 28	2707	624	83	1906
Pistol. Magazine-	W. H. Trippett	603,523	May 3	528	116	83	703
Placket-protector and skirt-supporter	W. H. Carr and J. G. Wolf	604,889	May 31	2947	674	83	1255
Plaiting-machine	H. Pervilhac	603,332	May 10	1077	241	83	825
Plane. Block or smoothing	P. Shea	603,754	May 10	918	204	83	796
Plant-support	C. L. Baldwin	601,782	Apr. 5	310	61	83	59
Plant-supporter	W. H. Speer	604,260	May 17	1502	424	83	1015
Plants, flowers, &c. Stake for	T. N. Parker	605,298	June 7	458	{100 / 101}	83	1438
Plants. Machine for reducing pithy	A. F. Madden	601,870	Apr. 5	484	{99 / 100}	83	90
Planter	G. B. Davison	603,757	May 10	922	204	83	796
Planter	J. L. Durham	601,897	Apr. 5	569	109	83	100
Planter	E. Michon	602,364	Apr. 12	1338	298	83	399
Planter	E. M. Rumph	602,173	Apr. 12	1020	224	83	205
Planter	J. D. Schofield	603,900	May 10	1199	271	83	849
Planter	W. G. Gray						
Planter and fertilizer-distributer. Combined cotton-seed	J. C. Wright	603,388	Apr. 12	1308	{306 / 307}	83	276
Planter and marker. Combined	W. P. Smith	604,139	May 17	1658	373	83	971
Planter attachment. Corn-	A. R. Young	602,584	Apr. 19	1631	371	83	339
Planter attachment. Corn-	L. E. Waterman	603,584	May 3	612	{136 / 137}	83	720
Planter. Check-row corn-	W. O. Duryea	605,634	June 14	1060	244	83	1574
Planter check-rower. Corn-	W. D. Cross	603,554	Apr. 19	1668	378	83	345
Planter. Corn-	G. D. Haworth	603,908	Apr. 26	2278	{518 / 519}	83	476
Planter. Corn-	L. H. Larson	605,008	June 14	1006	230	83	1564
Planter. Corn-	H. Rees	603,730	May 10	892	{198 / 199}	83	790
Planter. Corn-	J. D. Tracy and J. F. Platt	603,148	Apr. 12	973	{212 / 213 / 214}	83	196
Planter. Corn-	J. Urbanek	603,801	May 10	1007	{225 / 226}	83	813
Planter. Corn-	S. M. Wixcel	605,089	May 31	2980	{753 / 754}	83	1330
Planter. Disk	M. P. Simpson, E. P. Williams, and J. M. Simpson.	605,755	June 14	1268	291	83	1612
Planter marker. Corn	H. T. Donaldson	605,702	June 14	1189	272	83	1597
Planter. Potato-	J. A. Cooper	605,906	June 7	646	{144 / 145}	83	1476

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Planter runner. Seed-	W. L. Spencer	604,800	May 31	2887	660	83	1944
Planter. Seed-	A. E. Blake	604,017	May 17	1449	324	83	982
Planter. Seed-	A. T. Stewart	603,213	Apr. 26	2708	639	83	576
Plastering. Composition of matter for	H. C. McMillin	605,898	June 21	1574		83	1690
Plastic substances. Mold or die for	F. P. McColl	604,590	May 24	2517	{572 / 573}	83	1154
Platen-press. Perfecting	F. L. and E. C. Jones	604,760	May 31	2823	645	83	1231
Platform: *See* Dumping-platform.	W. J. Wilder	604,201	May 17	1701		83	998
Plating metals	W. J. Wilder	602,582	Apr. 19	1627	371	83	339
Plating sheet metal	J. C. Slack	606,591	June 28	2891	669	83	1962
Pliers	J. T. Smith	602,880	Apr. 26	2290	505	83	468
Pliers. Wire-splicing	R. Beatty	601,969	Apr. 5	502	121	83	110
Plow	W. Auxier	603,495	May 3	468	104	83	690
Plow	A. Reifsnyder	606,242	June 28	2251	520	83	1835
Plow	J. W. Ross	606,490	June 28	2703	622	83	1935
Plow	W. H. Ward	604,814	May 31	2905	{664 / 665}	83	1247
Plow	F. L. Woodward	602,278	Apr. 12	1201	263	83	241
Plow	A. D. Sperry	604,274	May 17	1922	430	83	1023
Plow and harrow. Combination	J. E. Ball	605,172	June 7	204	51	83	1389
Plow attachment	S. H. Ritter	606,244	June 28	2263	522	83	1886
Plow attachment	E. Whitman	603,457	May 3	337	75	83	664
Plow attachment	O. C. Hubbard	604,351	May 17	2078	465	83	1053
Plow-carriage	M. Doss	604,309	May 17	1995	447	83	1037
Plow. Cotton-	D. C. Weed and F. Atkin	606,609	June 28	2930	677	83	1967
Plow. Cultivator-	E. M. Heylman	606,412	June 28	2572	{242 / 243}	83	1573
Plow. Disk	E. Dallmann	605,631	June 14	1055	243		
Plow. Electrically driven and moved	F. W. Gordon	608,126	Apr. 26	2686	610	83	556
Plow. Gang-	W. Stephenson	603,979	May 10	1321	308	83	873
Plow. Gang-	J. G. Wells	601,765	Apr. 5	276	54	83	53
Plow-handle clamp	C. H. Whitney	605,767	June 14	1263	298	83	1617
Plow, planter, and cultivator. Combined	W. P. Dunlap	602,231	Apr. 12	1117	245	83	225
Plow pulverizing attachment	W. J. Campbell	605,994	June 21	1766	405	83	1734
Plow seat attachment	F. Wolf	602,711	Apr. 19	1945	442	83	320
Plowshare	W. G. Danielsen and W. Merrill	605,085	June 7	28	8, 9	83	1358
Plow. Sulky-	W. H. Ferrin	605,298	June 7	463	104	83	1440
Plow. Sulky-	H. H. Saber	605,311	June 7	484	108	83	1444
Plow. Sulky-	I. Dreschner	605,613	June 14	1014	234	83	1566
Plucking-machine	O. F. Richter	602,381	Apr. 12	1365	305	83	275
Plumber's branch-pipe-holding device	F. White and F. J. Murphy	604,518	May 24	2388	543	83	1129
Plumber's clamp	E. T. Burgess	601,651	Apr. 5	48	10	83	10
Plumber's furnace	E. S. Hall	605,710	June 14	1194	275	83	1600
Plunger brake-head	G. B. Goodall	602,486	Apr. 19	1548	352	83	394
Plush fabric	A. and J. Szulczewski	604,405	May 24	2165	496	83	1060
Pneumatic cushion	J. W. and A. Mathis	603,174	Apr. 26	2737	628	83	566
Pneumatic-despatch apparatus	H. Clay	603,925	May 10	1240	{281 / 282}	83	857
Pneumatic-despatch tube	J. B. Schuman	605,876	June 21	1533	353	83	1661
Pneumatic elevator	F. W. Hedgeland	602,671	Apr. 19	1882	428	83	366
Pneumatic motor	J. T. Trench	605,840	June 21	1461	334	83	1668
Pneumatic-tired wheel	H. Bandler	606,375	June 28	2311	536	83	1848
Pocket	M. J. Clark	601,962	Apr. 5	571	119	83	108
Pocket and guard. Combined watch	G. A. Wieland	603,495	May 3	466	103	83	690
Pocket-book	S. L. Wentz	603,647	May 10	1100	247	83	830
Pocket-book register	J. F. Harvey	602,918	Apr. 26	2304	525	83	482
Pocket-knife	C. Sebastian	604,744	May 31	2796	640	83	1236
Pocket-register	L. W. French	601,849	Apr. 5	449	91	83	84
Poke. Animal-	G. D. Aiken	604,027	May 17	1463	328	83	985
Pole-step. Portable	W. K. Dumble	605,283	June 7	431	97	83	1434
Polisher or brush	F. Holland						
Polishing compounds to polishing or cutting tools. Supplying	J. Fleweger	604,895	May 31	3041	698	83	1274
Polishing device. Hand	A. Kortum	605,641	June 14	1074	246	83	1577
Polishing-wheel	P. L. Hayes	606,546	June 28	2516	581	83	1947
Pool-table. Parlor	E. L. Pease	602,194	Apr. 12	1058	{329 / 330}	83	218
Portable house	J. Aitchison	604,648	May 24	2613	598	83	1173
Portière-rod							
Post: *See* Fence-post.							
Post and winding apparatus. Combined	W. L. Yergin and J. E. Wadsworth	605,789	June 14	1286	298	83	1618
Post-office-box cabinet	J. C. Keith	606,556	June 28	2881	668	83	1951
Postmarking and stamp-canceling machine	E. M. Vail and G. Potter	606,257	June 28	2284	530	83	1842
Pot-hall holder	M. A. Cogley	606,276	June 28	2314	536	83	1849
Pot signal	H. Johnson	602,852	Apr. 26	2198	486	83	461
Potato-bug destroyer	C. Nelson and H. F. S. Justesson	604,681	May 24	2563	589	83	1167
Potato cutter and planter	J. A. Mengel, G. K. Binkley, and G. B. Gerber.	606,991	June 28	2940	548	83	1954
Potato-digger	J. A. Buck	602,497	Apr. 19	1562	356	83	397
Potato-digging machine	E. Hampel	605,871	June 21	1594	351	83	1660
Potato-masher, kettle-cleaner, and vegetable-fork. Combination	A. H. Cartwright	604,965	May 31	3159	725	83	1266
Poultry-house	S. C. Ashmore	603,121	Apr. 26	2653	603	83	540
Pouncing-machine	G. R. Clarke	602,977	Apr. 26	2408	{548 / 549}	83	509
Pouncing-machine	G. R. Clarke	602,978	Apr. 26	2412	{549 / 550}	83	509
Powder-motor	T. M. Freeble	605,445	June 7	728	{164 / 165}	83	1402
Power distributing and equalizing device	R. Marvin	603,087	Apr. 19	861	{187 / 188}	83	175
Power-house. Floating	J. Stickel	603,929	May 10	1249	284	83	859
Power-transmitting device	G. L. Whyte	603,674	Apr. 19	1855	{426 / 427}	83	367

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Precious metals. Apparatus for extracting	J. R. Hebæus	603,904	May 10	1207	273	83	851
Preserving alimentary substances, &c	A. L. and A. W. Lawton	603,793	Apr. 19	1063	.....	83	494
Press: *See* Baling-press. Copying-press. Cotton-press. Filter-press. Fruit-press. Hay-press. Hydraulic press. Meat-press. Platen-press. Printing-press. Punching-press. Reducing-press. Soap-press. Wine-press.

Press	V. D. Anderson	603,989	Apr. 26	2334	531	83	486
Press-board holder	L. Siegfried	603,708	Apr. 19	1949	441	83	396
Pressing-machine	E. G. Tremaine and P. Lorillard, Jr.	605,478	June 28	2684	618 / 619	83	1921
Pressure-recorder	F. L. Wolfe	603,391	May 3	252	56	83	646
Primary element with regenerable negative electrode.	O. R. E. von Burgwall and L. Ofenschlisel.	603,890	May 10	1184	.....	83	846
Primer. Ordnance	T. G. Bennett	606,440	June 28	2627	604	83	1910
Printers' blankets. Apparatus for washing	J. Hawthorn and J. P. Liddell	603,638	May 10	731	163 / 164	83	759
Printers' blankets. Machine for washing	D. H. Simpson, J. Walker, J. Strang, and F. Farnworth.	604,504	May 24	2365	535 / 537	83	1125
Printer's chase	D. J. Deegan	602,679	Apr. 19	1892	431	83	366
Printer's chase	J. Tunnah	603,214	Apr. 26	2799	639	83	577
Printing and folding machine	N. A. Stimson	606,397	June 28	2536	588 / 589	83	1891
Printing attachment. Paper-roll	A. R. Martin	605,061	May 31	3317	761 / 762	83	1327
Printing index-rings. Machine for	C. H. Veeder	602,412	Apr. 12	1420	321	83	286
Printing-machine	G. W. Swift, Jr	602,277	Apr. 12	1102	262 / 263	83	240
Printing-machine. Bed and cylinder	G. T. Murray	602,406	Apr. 12	1413	319	83	284
Printing machine. Box	J. F. Gilliland	603,665	May 10	806	178	83	774
Printing-machine cushioning apparatus	J. T. Hawkins	604,752	May 31	3511	842	83	1229
Printing machine. Hat	T. J. McCarthy	604,778	May 31	3851	952	83	1287
Printing-machine sheet-delivery mechanism	E. Nister	603,236	Apr. 12	1126	247	83	226
Printing-machines. Bed-motion for cylinder	W. C. Duryea	603,940	Apr. 26	2179	492	83	457
Printing patterns. Cliché for	E. Quennoy	603,578	May 3	005	135	83	719
Printing-plate and making same. Composite	S. H. Horgan	604,472	May 24	2206	524	83	1115
Printing-plates to cylindrical surfaces. Means for securing	J. T. Hawkins	604,149	May 17	1698	360	83	978
Printing-press	H. F. Bechman	604,298	May 17	1953	438 / 439	83	1029
Printing-press	G. P. Fenner	604,974	May 31	3166	728 / 729 / 730	83	1298
Printing-press	A. H. Smith	605,350	June 7	567	125	83	1460
Printing-press feed-gage	C. E. Balding	603,946	May 3	7	2	83	602
Printing-press for cutting ribbons and counting same.	F. Berkemeyer	605,173	June 7	905	51, 52	83	1269
Printing-press. Perfecting	H. P. Feister	602,396	Apr. 12	1306	312 / 314 / 315	83	281
Printing-presses. Automatic stop mechanism for	G. Gibbs and I. Stone	605,478	June 14	776	178	83	1522
Printing-presses. Impression throw-off for platen	F. A. Burnham	604,719	May 31	2760	631	83	1219
Printing-presses. Means for actuating ink-disks in platen	F. A. Burnham	603,493	May 3	469	104	83	691
Printing yarns. Method of and apparatus for	C. L. Horack	603,992	May 10	1346	308	83	878
Privy-stool	W. G. Bliss	604,597	May 24	2329	575	83	1156
Produce-carrier	R. C. Weltner	603,000	Apr. 26	2449	556	83	509
Projectile	J. H. Hammer	603,466	May 3	401	90	83	678
Projectile. Armor-piercing	H. A. Brustlein	602,973	Apr. 26	2401	548	83	501
Projectile. Shrapnel	M. Darmancier	603,525	May 3	532	117	83	708
Projectiles. Tongs for handling	C. F. Jeansén	604,758	May 31	2820	644	83	1231
Propeller	J. V. O'Connor	603,703	May 10	836	165	83	779
Propeller. Reversible-blade	C. W. Foster	602,908	Apr. 26	2270	514 / 516	83	475
Propeller. Screw	J. M. Adam	602,651	Apr. 19	1832	416	83	377
Propeller. Screw	W. J. Perkins	606,397	June 28	2352	544	83	1856
Propeller. Screw	P. A. N. Winand	606,322	June 28	2306	533	83	1895
Propeller-shafts. Friction-lessening device and brake for	G. M. Guerrant	605,545	June 14	576	205	83	1542
Propelling and steering apparatus. Hydrostatic vessel	F. Krefft	602,294	Apr. 12	1108	243	83	238
Propelling mechanism	G. L. Galbrun	602,440	Apr. 19	1475	336	83	310
Propelling mechanism. Vessel	F. Gray	605,788	June 14	1332	305	83	1625
Propulsion of vessels. System of electrical	J. J. Hellmann	602,325	Apr. 12	1276	288	83	257
Protracting land surveys. Device for	J. D. Brown	604,517	May 24	2287	542	83	1129
Protractor	A. W. Chase	601,630	Apr. 5	10	3	83	4
Protractor	M. S. Hoy	606,244	June 28	2444	566	83	1874
Puller: *See* Sprout-puller. Stump-puller.							
Pulley	J. C. Knoblock	605,104	June 7	65	19	83	1264
Pulley	H. S. Pell	605,557	June 14	609	209	83	1546
Pulley	T. Kirchhoff	601,660	Apr. 5	65	13	83	14
Pulley. Expansible	C. F. Endter	603,840	May 10	1099	245	83	822
Pulley. Power	F. H. Spear	605,980	June 21	1739	400	83	1790
Pulley. Self-oiling	H. S. Albrecht	604,933	May 17	1989	434	83	1086
Pulverizer	W. H. Howe and P. Stieferman	602,389	Apr. 19	1228	284	83	259
Pulverizer	L. d'Auria	603,554	May 10	1171	264 / 265	83	844
Pump	J. O'Neil	602,809	Apr. 26	2214	501	83	466
Pump	M. L. G. Wheeler	601,980	Apr. 5	565	118	83	106
Pump	C. G. White	603,498	Apr. 19	1557	354	83	926

Alphabetical list of designs, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Pump. Breast	J. H. Hoover	603,884	May 3	599	121	83	715
Pump. Direct-acting steam	A. F. Hall	604,613	May 24	2352	588	83	1102
Pump governor. Steam	W. B. Mason	603,026	Apr. 26	2499	564	83	517
Pump. Helico-centrifugal	A. Magnot	605,888	June 21	1559	358 / 359	83	1687
Pump. Hydraulic	H. F. Schroeder	603,660	Apr. 19	1371	425	83	384
Pump. Hydraulic air-compressing	E. H. Weatherhead	603,942	Apr. 26	2354	651	83	567
Pump. Hydraulic-pressure	T. A. Kughler and J. Gomes	604,767	May 31	2832	647	83	1233
Pump. Oil-well	W. J. Wright	604,208	May 17	1793	404	83	993
Pump. Portable	W. G. Gess and J. Tonge	604,579	May 24	2502	599	83	1151
Pump. Rotary	W. M. Wood	603,805	May 10	1016	227	83	816
Pump. Steam vacuum	F. R. Crumbaker	603,498	Apr. 19	1564	356	83	927
Pump valve-gear	J. Doherty	606,480	June 28	2663	620	83	1969
Pump valve mechanism. Steam	G. de Laval	604,475	May 24	2310	534	83	1116
Pumps. Power-frame for	R. J. Hunter	603,849	Apr. 26	2190	497	83	460
Pumps. Pressure-actuated governor for	J. H. MacDonald	601,664	Apr. 5	71	14	83	15
Pumps to barrels. Clamp for securing	W. Peoples	604,268	May 17	1906	426	83	1080
Pumping-engine. Pneumatic	E. A. Rix	605,167	June 7	231	56	83	1504
Pumping-jack	O. U. Stahlman	603,482	Apr. 19	1542	350 / 351	83	928
Punch	A. Kraeuter	604,564	May 24	2474	562	83	1146
Punching-machine	M. Boyer	602,721	Apr. 19	1960	445	83	402
Punching-machine	J. J. Sullivan	603,054	May 10	771	171	83	766
Punching-machine sheet-feeding mechanism	W. Painter	605,334	June 7	519	116 / 117	83	1552
Punching-press	W. O. Hogaboom	604,302	May 24	2145	493	83	1068
Push-button	F. J. List	606,502	June 28	2442	654	83	1893
Push-button card receiver and ejector. Combination	O. M. Bossert	604,206	May 17	1962	440	83	1051
Puzzle	J. Archibald	603,217	Apr. 26	2303	640	83	577
Puzzle	F. H. Donaldson	602,735	Apr. 19	1084	450	83	406
Puzzle	O. J. Haarlaender	605,096	June 7	51	16	83	1362
Puzzle	W. A. Hallenbeck	602,219	Apr. 12	1101	242	83	229

Rail-chair	G. D. Claflin, Jr	605,515	June 28	2737	636	83	1969
Rail-clamp	H. K. Ritter	604,702	May 31	2673	656	83	1231
Rail conductor for electric systems	L. E. Walkins	604,098	May 17	1599	359	83	961
Rail frog. Lock	J. W. Close	605,662	June 14	1108	255	83	1583
Rail-holder	C. McLennon	605,794	June 14	1356	310	83	1680
Rail-joint	P. W. Arnold and J. Keil	604,365	May 17	1941	435	83	1027
Rail-joint	F. V. Jarden	606,191	Apr. 26	2768	631	83	571
Rail-joint	T. F. Philippi	602,108	Apr. 12	898	193	83	180
Rail-joint	E. J. Schindehütte	606,069	June 21	1956	450	83	1760
Rail-joint	J. Wayland	602,779	May 10	903	215	83	804
Rail-joint	G. A. Weber	605,365	June 7	402	90	83	1439
Rail-joint	S. Young	602,758	May 10	916	203	83	795
Rail-joint	M. Mullins and C. Fleming	605,780	June 14	1237	286	83	1609
Rail-joint	J. A. McCain	603,610	May 3	663	153	83	733
Rail-joint	F. B. Wagner and A. W. Foote	603,352	May 3	186	42	83	687
Rail-joint. Protected	J. M. Teamer	602,788	Apr. 19	2053	466	83	430
Rail mounting. Third	S. H. Short	605,260	June 7	308	69	83	1426
Rail-sustaining bar	W. Goldie	601,645	Apr. 5	36	8	83	9
Rail-sustaining bar or plate	W. Goldie	601,646	Apr. 5	40	8	83	9
Rail-sustaining bar or plate	W. Goldie	601,647	Apr. 5	42	8	83	9
Rail-track cleaner	E. G. Jones	604,905	May 31	2998	686 / 689	83	1205
Railway. Aerial	M. A. de Palacio	602,330	Apr. 12	1128	248	83	207
Railway and cars. Single-track	J. Hopkirk	602,601	Apr. 19	1743	397	83	359
Railway bed and tie	E. Smith	601,799	Apr. 5	334	66	83	62
Railway. Bicycle	W. F. Mangels	604,998	May 31	3205	737 / 738	83	1305
Railway conductor and contact device. Electric	A. S. Krotz, W. P. Allen, and O. S. Kelly.	602,336	Apr. 12	1309	265 / 267	83	209
Railway-conduit	F. S. Pearson	606,626	May 10	759	169	83	764
Railway coupling attachments. Spring-protecting device for	W. Thornburgh	606,316	June 28	2366	538	83	1884
Railway-crossing	C. Hansel	606,389	June 28	2433	564	83	1878

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Railway-crossing signal. Electric	L. C. Smith	604,481	May 24	2222	497	88	1101
Railway. Electric	E. C. Crocker	603,694	May 10	705	157	88	754
Railway. Electric	E. C. Crocker and E. C. Howe	603,695	May 10	707	158	88	754
Railway. Electric	C. H. Davis	605,663	June 14	1110	355	88	1564
Railway. Electric	J. H. Guest	604,747	May 31	2801	641	88	1227
Railway. Electric	C. F. Holtmann and C. Bergmann	603,060	Apr. 26	2537	577	88	586
Railway. Electric	R. M. Hunter	605,834	June 14	1406	323	88	1690
Railway. Electric	H. W. Libbey	602,584	Apr. 19	1712	399	88	854
Railway. Electric	A. J. Moxham	605,548	June 14	816	189	88	1690
Railway. Electric	F. D. Sweet	604,911	May 31	3088	708	88	1229
Railway. Electric	A. Norman	605,970	June 21	1721	395	88	1717
Railway. Electromagnetic-switch	H. Tomlins	605,361	June 7	868	131	88	1464
Railway fog signaling apparatus	C. F. Beerstecher	606,501	June 28	2719	627	88	1920
Railway foot-guard	F. A. Cramer and J. A. Garman	603,615	Apr. 19	1764	408	88	903
Railway-gate mechanism	J. D. Campbell and M. E. Cummings	603,621	May 10	699	156	88	752
Railway-gate-operating device	J. B. Squire	605,145	June 7	168	41	88	1368
Railway-rail-end support	C. L. Winegard	602,382	Apr. 12	1397	306	88	975
Railway-rail joint	M. Sellers	605,520	June 14	809	195	88	1584
Railway-rail-joint base-plate	E. R. Stiles	605,856	June 7	574	127	88	1462
Railway-rail tie	H. C. Wilson	606,259	June 28	2800	580	88	1644
Railway safety-gate	A. W. Biddinger	605,847	June 21	1481	289	88	1671
Railway-signal	J. S. Dunn	606,197	June 28	2149	498	88	1615
Railway-signal	G. W. Green	602,004	Apr. 5	738	154	88	135
Railway-signal	S. Mills	603,150	Apr. 26	2704	614	88	559
Railway-signal	M. C. Oster	606,075	June 21	1922	441	88	1732
Railway-signal	F. Williams	602,676	Apr. 19	1698	442	88	866
Railway signal. Electric	W. H. Jordan	604,866	May 31	3000	690	88	1265
Railway-signal. Electric	C. L. Renrew	605,798	June 14	1302	313	88	1631
Railway signaling apparatus	H. Bezer	602,423	Apr. 19	1441	318	88	904
Railway signaling apparatus	W. T. C. Pratt	604,711	May 31	2735	327	88	1215
Railway signaling and switching apparatus	J. D. Taylor	605,359	June 7	580	625	88	1463
Railway signaling system	C. H. Davis	606,450	June 28	2641	129	88	1913
Railway signaling system and apparatus	H. Bezer	602,798	Apr. 19	2071	607	88	423
Railway-spike	J. H. Malven	605,790	June 14	1351	470	88	1689
Railway-spikes. Apparatus for manufacturing	H. C. Rumpf	604,501	May 24	2519	471	88	1154
Railway supply system. Electric	P. J. Pringle	602,142	Apr. 12	953	309	88	193
Railway-switch	W. C. Ayers	603,372	May 3	319	210	88	643
Railway-switch	W. and W. J. Harris	603,902	May 10	1203	49	88	850
Railway-switch	E. J. Jenkins	602,014	Apr. 5	737	272	88	140
Railway-switch	J. F. Ruhland	603,707	May 10	843	157	88	781
Railway-switch	W. H. Rouston	601,856	Apr. 5	467	156	88	87
Railway switch-actuating mechanism	J. W. Thomas, Jr.	606,602	June 28	2911	96	88	1905
Railway switch and signal mechanism	J. Deller	605,599	June 14	983	274	88	1561
Railway-switch. Automatic	C. H. Schager and J. M. J. Lundin	606,362	June 28	2478	295	88	1660
Railway-switch lock	W. A. Slocum	603,385	May 3	230	575	88	646
Railway switch-lock. Automatic	C. W. Squires	602,667	Apr. 19	1673	54	88	866
Railway-switch-operating mechanism	J. E. Young and G. Morden	602,949	Apr. 12	1147	456	88	231
Railway-switch-operating mechanism	F. M. and W. W. Tyler	606,433	June 28	2615	351	88	1908
Railway-switch-operating mechanism. Street-	H. A. Chase	605,814	June 14	1366	603	88	1665
Railway system. Electric	W. Lawrence	605,317	June 7	495	319	88	1445
Railway system. Third-rail underground electric	L. E. Walkins	605,066	May 31	3329	110	88	1229
Railway-tie	H. T. Armstrong	604,189	May 17	1768	764	88	998
Railway-tie	J. Kline	601,810	Apr. 5	393	397	88	68
Railway-tie	M. Riley	605,233	June 7	327	74	88	1418
Railway-tie	J. A. Schmahl	602,366	Apr. 12	1382	75	88	978
Railway-tie	J. M. Clark	605,270	June 7	409	300	88	1490
Railway-tie. Metallic	W. T. Wilkinson	603,789	Apr. 19	2066	98	88	482
Railway-tie. Metallic	W. J. Allin	601,705	Apr. 5	377	460	88	68
Railway-tie plate	G. A. Parmenter and S. H. Peirce	604,543	May 24	2484	55	88	1127
Railway-track cleaner for street-cars	D. A. Moore	604,410	May 24	2182	553	88	1127
Railway-track drill	F. Nather	602,364	Apr. 12	1170	499	88	1068
Railway track structure	J. H. Harting	606,544	June 28	2810	258	88	886
Railway turn-table	M. Farrall	602,597	Apr. 19	1737	647	88	1946
Railway wrecking-frog	J. Claret and O. Vuilleumier	604,968	May 31	3157	648	88	356
Railways. Automatic current-distributer for electric	C. H. Davis	605,664	June 14	1118	727	88	1297
Railways. Combined train arresting and signaling mechanism for electric	C. L. Van Buskirk	603,215	Apr. 26	2600	356	88	1584
Railways. Conveyer for endless rope	L. C. Werner	605,941	June 21	1660	640	88	577
Railways. Electric block-signal system for	S. H. Short	605,361	June 7	394	281	88	1705
Railways. Third rail for electric	G. B. Coleman and J. W. Duggan	603,678	Apr. 19	1890	389	88	1427
Railways. Traveling contact for underground electric	C. S. Cox	602,606	Apr. 19	1694	430	88	866
Raisin-seeder	H. Bardsley	606,965	June 28	2301	437	88	394
Raisin-seeding machine	D. W. Boyes and J. R. Denison	603,722	Apr. 19	1961	333	88	1647
Rake: *See* Hay-rake. Horse-rake. Lawn-rake.	V. Wilhelmi	603,650	Apr. 19	1881	445	88	402
Range-boiler					417	88	376
Range-boiler							

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Range. Steel	A. E. Bronson	606,510	June 28	2730	629	88	1981
Rasp-machine	J. A. McHardy	606,020	June 21	1817	630	88	1733
Ratan. Treating	M. P. O. Dickhuth	602,800	Apr. 19	2100	419	88	427
Ratchet-wheel wrench	J. H. Fitch	603,377	May 3	227	50	88	644
Ratchet-wrench. Reversible	E. M. Tyler	603,159	Apr. 26	2716	617	88	562
Razor. Safety	E. E. Deputy	605,574	June 7	416	94	88	1431
Razor-strop	T. O. Holland	603,705	May 10	944	211	88	800
Razor-strop	T. O. Holland	603,954	May 10	1287	293	88	966
Razor-strop casing	J. W. Brown	603,074	Apr. 26	2571	583	88	532
Reamer. Pipe	P. Mueller	605,808	June 21	1567	361	88	1689
Reaping-machine	J. A. Gordon	602,441	Apr. 19	1476	337	88	810
Reaping-machine. Binding	W. W. Burson	603,927	May 10	1061	236	88	994
Reaping-machine grain-reel	M. G. and P. P. Keen	606,346	June 28	2447	567	88	1875
Reclining-chair	H. F. Rankin	602,197	Apr. 12	1063	233	88	214
Recorder: *See* Fare-recorder. Time-recorder. Pressure-recorder.	C. L. Jaeger	605,548	June 14	862	206	88	1543
Recording instrument. Electric	L. J. Kingsley	605,167	June 7	195	49,50	88	1398
Reducing-press							
Reel: *See* Fishing-reel. Wire-reel. Hose-reel.	M. and O. Helgeson	601,807	Apr. 5	350	71,72	88	66
Reel-carrier and feed-cart. Combined	S. O. Cowper-Coles	602,306	Apr. 12	1246	274	88	251
Reflectors. Manufacture of	J. Sedlacek	602,199	Apr. 12	1067	234	88	215
Refrigerating-machine	F. Allen	606,326	June 28	2408	558	88	1868
Refrigerating-machine. Absorption	J. Sedlacek	601,716	Apr. 5	182	35,36	88	36
Refrigerating-machines. Condensing-water and air cooling apparatus for	J. H. Emert	602,843	Apr. 26	2179	493	88	459
Refrigerator	R. D. Gallagher, Jr.	602,599	Apr. 19	1740	395	88	359
Refrigerator	J. A. Potter	606,083	June 21	1944	396	88	1756
Regenerator	H. F. Stanley	602,483	Apr. 19	1544	447	88	323
Refrigerator-car	A. Slomka	601,796	Apr. 5	333	351	88	33
Refrigerator lunch-box					67	88	68
Register: *See* Cash-register. Pocket-register. Fare-register. Pocket-book register.	W. C. Homan	605,892	June 14	1403	322	88	1638
Registering-ring							
Regulator: *See* Feed-water regulator. Gas-regulator. Lamp-regulator. Fluid-pressure regulator. Temperature-regulator. Windmill-regulator.	N. M. Davis	606,521	June 28	2749	635	88	1935
Rein-holder	D. L. Turner	602,509	Apr. 19	1686	394	88	349
Releasing device	J. E. Peterson	602,228	Apr. 12	1113	244	88	224
Remedial appliance	H. S. Blackmore	605,379	June 7	620	.....	88	1470
Retort and making same	J. V. Rice, Jr	604,841	May 31	2950	674	88	1256
Retort. Naphtha	J. W. Craw	603,880	Apr. 26	2160	675	88	455
Reversing device	G. A. Owen	603,870	Apr. 26	2215	490	88	466
Revolver	C. C. and F. Trapp	603,489	Apr. 19	1558	353	88	335
Revolving chair	S. G. Stevens	603,212	Apr. 26	2797	650	88	576
Revolving gate	H. W. Leonard	603,063	Apr. 26	2543	578	88	537
Rheostat	R. W. Ney	603,027	Apr. 26	2490	565	88	517
Rheostat	R. H. and F. H. Wappler	604,949	May 31	3131	720	88	1223
Rheostat. Electric-lamp							
Ring: *See* Curtain-pole ring. Packing-ring. Hat-packing ring. Registering-ring. Napkin-ring. Traverse-ring.	L. H. Schneider	603,743	May 10	900	200	88	792
Rivet-setting machine	L. E. Miller	602,139	Apr. 12	944	206	88	191
Rivet-sticking machine	O. E. Hacker	603,139	Apr. 26	2690	207	88	556
Road-making machine	F. W. Mattern	603,023	Apr. 5	750	611	88	143
Road, railway road-bed, &c. Dustless	G. W. Taft	601,819	Apr. 5	372	161	88	70
Road-rollers. Tongue-truck connection for	W. O. Wisner	606,614	June 28	2929	78	88	1909
Roadway-guard. Automatic	J. Johnson	602,082	Apr. 12	852	679	88	1772
Roadways, tiles, &c. Composition for					.....	88	178
Roaster: *See* Beef-roaster. Coffee-roaster.	E. S. Lockstone	604,222	May 17	1660	421	88	1015
Roasting-pan	J. Grundy	603,006	Apr. 5	736	155	88	137
Robe. Night	H. R., H. L., and L. G. Hancock	603,589	May 3	539	118	88	704
Rock-drill	M. C. Jackson	604,152	May 17	1695	119	88	979
Rock-drill	J. G. Leyner	604,538	May 24	2434	551	88	1135
Rock-drill engine	S. P. Blackmore	602,603	Apr. 19	1916	486	88	893
Rock or like drill	H. P. Russ	601,995	Apr. 5	604	148	88	181
Rocker attachment	G. Lehberger	603,021	Apr. 5	747	161	88	141
Rod-mill floor	M. S. Schaill	603,057	Apr. 5	778	168	88	147
Rods. Disconnecting-coupling for pull					169		
Roller: *See* Dirt-roller. Shade-roller. Land-roller.	W. H. Morgan	603,906	Apr. 26	2440	537	88	508
Roller-brake	D. C. Prescott	605,474	June 28	2977	616	88	1919
Rolling apparatus	V. E. Edwards	603,103	Apr. 26	2631	595	88	543
Rolling-mill	S. V. Huber	605,660	June 14	1122	239	88	1566
Rolling-mill	W. D. Matthews	603,864	Apr. 26	2803	260	88	464
Rolling-mill					500		

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Rolling out hollow metal ingots into tubes. Mechanism for	J. C. Sturgeon	601,784	Apr. 5	313	68	88	50
Rolls	P. M. Weber	606,008	June 28	2080	677	88	1967
Roof-bracket. Painter's	D. Cleland	602,909	Apr. 12	1083	287	88	217
Roof-securing device	A. N. Monteer	604,775	May 31	2646	650	88	1286
Roof. Tiled	C. W. Schou	605,750	June 14	1251	299	88	1611
Roofing. Thatch	C. N. Bushnell	606,186	June 28	2125	486	88	1810
Root or sod cutter	P. Melton	605,497	June 14	808	187	88	1269
Rope-clamping hook	A. R. Bradeen	602,694	Apr. 19	1918	436	88	308
Rope-hauling machine	W. B. Lantz	606,083	June 21	1901	428	88	1748
Rope-making machine	H. I. Hansen	604,614	May 24	2555	568	88	1168
Rotary drier	H. H. Wing	605,355	May 3	189	43	88	636
Rotary engine	W. S. Bate	602,980	Apr. 26	2336	532	88	459
Rotary engine	P. J. Boris	604,960	May 31	3145	723 / 724	88	1294
Rotary engine	D. B. Cook	604,709	May 24	2730	622 / 624	88	1195
Rotary engine	D. Drake	603,679	May 10	796	176	88	773
Rotary engine	A. N. Gilbert	604,086	May 17	1479	332	88	986
Rotary engine	M. E. Gilbert	605,460	June 7	750	171	88	1497
Rotary engine	R. P. Jarvis	602,708	Apr. 19	1933	430	88	309
Rotary engine	S. Kershner	602,456	Apr. 19	1501	345	88	315
Rotary engine	M. C. Kessler	602,334	Apr. 12	1289	295 / 296	88	200
Rotary engine	T. C. Luce	604,254	May 17	1868	423	88	1015
Rotary engine	F. J. Macey	604,995	May 31	3803	737	88	1305
Rotary engine	J. H. Meyer	601,354	Apr. 5	450	98	88	85
Rotary engine	J. H. Parsons	605,906	June 21	1586	364	88	1698
Rotary engine	J. H. Parsons	605,907	June 21	1586	365	88	1698
Rotary engine	W. J. Pearce	606,060	June 21	1989	444	88	1735
Rotary engine	W. H. Phillips	605,585	June 14	980	222 / 223	88	1557
Rotary engine	F. Priestley	603,787	May 10	880	198	88	790
Rotary engine	W. Smith	602,680	Apr. 19	1795	410	88	360
Rotary engine	A. Stephens	605,760	June 14	1270	293 / 294	88	1615
Rotary engine	W. S. Sutton	604,276	May 17	1985	450 / 451	88	1084
Rotary engine	W. D. Thomas	601,914	Apr. 5	560	115 / 116	88	106
Rotary engine	C. W. Triplett	601,916	Apr. 5	563	116	88	107
Rotary engine	J. J. Unbehend	606,606	June 28	2017	675 / 676	88	1966
Rotary engine	C. G. Vance	602,580	Apr. 19	1623	370 / 371	88	336
Rotary engine	W. Willerton and T. Shortliff	604,641	May 24	2601	594	88	1170
Rotary engine	C. F. C. Lohmann	606,563	June 28	2843	655	88	1958
Rotary motor	L. K. and C. S. Carnahan	605,852	June 21	1498	341 / 342	88	1673
Rotary steam-engine	F. Galpin	605,564	June 14	916	215	88	1550
Rotary steam-engine	A. Lee	605,805	June 14	1372	315	88	1638
Rotary steam-engine	F. D. Moon	604,333	May 17	2039	456	88	1045
Rotary steam-engine	I. Wepplo	602,787	Apr. 19	2064	468 / 469	88	421
Rotary steam-engine	A. Zwiebel	601,606	Apr. 5	196	35	88	28
Rotary steam-engine	C. E. Graham	603,761	May 10	999	230	88	797
Rotary wheel or brush. Flexible	J. Ashton	605,099	Apr. 26	2618	594	88	541
Roundabout	C. T. Wilde and C. W. Hinchcliffe	604,164	May 17	1716	387	88	988
Roundabout	W. S. Richards	606,155	June 21	2068	475	88	1780
Routing-machine	W. M. Seeger	604,800	May 31	3039	696	88	1278
Rubber-dam holder	H. C. Freshour	606,707	June 14	1191	274	88	1600
Rubber pump-bucket	C. E. Posh	605,333	June 7	326	75	88	1413
Rubber-shoe attachment	C. A. Maynard	602,346	Apr. 12	1307	291	88	203
Rubber-tired wheel	A. H. Alden	604,994	May 31	3099	712	88	1295
Rubber water-bag. India	A. H. Alden	604,995	May 31	3100	713	88	1295
Rubber water-bag. India	A. W. Gottlock	602,131	Apr. 12	933	204	88	189
Rule and measuring-stick	W. L. E. Keuffel	603,695	May 10	823	181	88	777
Rule. Slide	J. G. D. Mack	606,388	June 28	2695	586	88	1858
Rule. Slide	J. E. G. Yalden	603,370	May 3	217	48	88	649
Rule. Slide	J. H. Van Steeter and G. N. Dow	603,941	Apr. 26	2653	651	88	598
Running-gear	E. H. Schwey	604,795	May 31	2876	632	88	1249
Sack-holder	J. Gross	603,289	May 3	150	35	88	631
Sad-iron	H. W. G. Plunkett	606,261	June 28	2383	527 / 528	88	1851
Saddle	A. E. McGill	603,473	May 3	414	92	88	660
Saddle-post	O. E. Converse	604,594	May 31	3040	668	88	1274
Safe	J. F. Jones	606,555	June 28	2893	651 / 652	88	1950
Safe-alarm	J. M. Curtice	603,733	Apr. 19	1979	449	88	405
Safe. Kitchen-	I. Freed	606,326	June 28	2432	562	88	1872
Safe. Passenger-car	I. Freed	604,033	May 17	1473	330	88	957
Safe-protection system. Electrical	E. W. Mason	603,460	Apr. 19	1509	344	88	316
Safety-gate	P. Motley	605,508	June 14	814	188	88	1530
Safety-gate	H. S. Brewington	606,374	June 28	2500	551	88	1884
Safety-pin	W. E. Michael	601,666	Apr. 5	74	15	88	15
Safety-pin	J. T. Payne	601,981	Apr. 5	580	146	88	121
Safety-pin	M. Rhine	606,427	June 28	2607	601	88	1906
Safety-pin	A. W. Browne and C. M. Kennedy	602,572	Apr. 19	1609	365	88	330
Saliva-ejector	T. Craney	605,028	June 7	24	7.9	88	1357
Salt-making apparatus	K. H. Cottle and R. C. Danly	604,559	May 24	2461	560	88	1149
Sand-blast	L. M. Elliot	605,198	June 7	253	59	88	1396
Sand-board	J. R. Donley	603,393	May 3	42	11	88	609
Sand-box	R. A. Dayton	601,688	Apr. 5	25	6	88	7
Sand-line spool	H. R. Hall	604,988	May 31	3168	738	88	1301
Sanitary bowl	E. Willis	606,618	June 28	2986	679	88	1908
Sap-spout	M. Barber and J. P. Ashby	605,215	June 7	289	67	88	1403
Sash-balance							

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Sash. Detachable	W. Romuender	601,680	Apr. 5	101	20	88	28
Sash-fastener	J. A. Black	602,051	Apr. 12	801	173	88	163
Sash-fastener	A. Coons	601,948	Apr. 5	542	134	88	120
Sash-fastener	O. L. Corbin	606,448	June 28	2038	607	88	1912
Sash-fastener	W. A. Coulson	602,731	Apr. 19	1976	448 / 449	88	405
Sash-fastener	E. N. Gilfillan	601,750	Apr. 5	347	49	88	47
Sash-fastener	J. Greife	606,484	June 28	2098	621	88	1923
Sash-fastener	A. Haenichen	601,959	Apr. 5	650	138	88	194
Sash-fastener	J. T. Thompson	606,101	June 21	1973	453	88	1763
Sash-fastener	H. W. Denham	603,783	May 10	973	217	88	806
Sash-holder	A. Haenichen	601,958	Apr. 5	657	136	88	193
Sash-holder	O. P. Kvernum	604,537	May 24	2423	551	88	1135
Sash-holder	J. and T. W. Leask	603,907	May 10	1213	274 / 275	88	852
Sash-holder	G. C. Young	606,262	June 28	2296	532	88	1846
Sash lifter and lock	E. W. Habermaas	604,952	May 31	3182	733	88	1301
Sash-lock	I. W. Brown	605,196	June 7	249	58	88	1306
Sash lock and lift. Combination	F. Cramblitt	603,476	May 3	428	95	88	668
Sash. Reversible window	H. Pedersen	606,226	June 28	2349	543	88	1855
Sash. Window	E. Beck	605,069	June 7	4	1.9	88	1353
Seabos. Means for hanging and guiding	G. Schwing	605,681	June 14	1144	266	88	1590
Seabos, transoms, &c. Lift for	J. I. Caruthers	604,608	May 24	2540	579	88	1159
Saw	E. H. Hutchinson	605,577	June 14	998	219	88	1554
Saw	F. W. Walquist, G. Nelson, and J. L. Gronquist.	604,279	May 17	1981	432	88	1095
Saw	C. B. Winchell	602,205	Apr. 12	1076	236	88	216
Saw clamp and filing-guide. Band	R. Wrublik	605,368	June 7	604	134	88	1467
Saw. Crosscut	A. Cunningham	606,051	June 21	1877	432 / 433	88	1744
Saw. Drag	P. Lord	603,909	May 10	1214	275	88	852
Saw-file	G. B. Clements	605,597	June 14	979	226	88	1560
Saw-frame	G. M. Hinkley	602,943	Apr. 26	2355	537	88	498
Saw-guide	H. Weir	604,673	May 24	2657	609	88	1182
Saw guide. Miter	A. Riggs	605,515	June 14	832	193 / 194	88	1533
Saw-gumming machine	G. N. Clemson	601,947	Apr. 5	641	134	88	120
Saw. Hack	G. N. Clemson	603,128	Apr. 26	2971	606	88	553
Saw. Hack	D. I. Green	602,158	Apr. 12	1000	219	88	201
Saw-handle	R. D. King	605,550	June 14	887	207	88	1544
Saw-jointer	I. Arnold	604,574	May 24	2495	568	88	1150
Saw jointing, staging, and setting device	F. S. Bradley and F. A. Cotton	604,714	May 31	2751	629	88	1218
Saw machine. Hack	U. Anderson	603,987	Apr. 26	2286	523 / 524	88	457
Sawmill-carriage	J. Frederickson	606,335	June 28	2431	569	88	1873
Saw-set	H. Neidhardt	603,536	May 3	549	120	88	706
Saw-set	C. H. Douglas	603,007	Apr. 26	2460	580	88	511
Saw-sharpener	A. Kott	602,261	Apr. 12	1167	257	88	235
Saw-table gage	R. Bennett. (Reissue)	11,051	Apr. 26	2256	551	88	587
Saw-tool	H. L. Trueblood	603,491	May 3	403	103	88	699
Saw-tool. Combination	C. H. Douglas	601,999	Apr. 5	716	152	88	135
Saw-tooth-ribbing machine	C. Fosby	601,775	Apr. 5	390	57	88	55
Saws. Means for stiffening circular	M. D. Abearn	602,208	Apr. 12	1280	271	88	247
Saws. Patching	F. Chimgar	604,727	May 31	2769	634	88	1221
Sawing-machine	L. A. Deuther	605,406	June 7	673	149	88	1482
Sawing-machine	C. F. Rood	603,541	May 3	554	122	88	706
Sawing-machine	D. S. Stewart	606,035	June 21	1848	426	88	1736
Sawing-machine	J. Allen and M. L. Jones	606,041	June 21	1860	429	88	1740
Sawing machine. Log	J. V. Garrett	604,979	May 31	3178	732	88	1300
Scaffold. Combination	L. Hachenberg	605,636	June 14	1069	245 / 246	88	1576
Scale	J. H. Swihart	603,415	May 3	298	67	88	657
Scale	T. A. Killman and H. A. Bratten	604,535	May 24	2419	550	88	1134
Scale. Computing	P. B. Clarke	601,997	Apr. 5	712	151	88	134
Scale for measuring material in bulk. Automatic	E. Finn	605,529	June 28	2789	644	88	1942
Scale fulcrum and bearing	A. A. Olund	604,675	May 17	1560	349	88	952
Scale. Line-dividing	W. H. Sanderson	601,951	Apr. 5	508	108	88	94
Scale. Platform	F. L. Fuller	603,656	Apr. 19	1843	420	88	378
Scale. Price	A. Bradley	603,957	May 10	1261	287	88	851
Scale. Wagon	J. Hempstalk	604,827	May 31	2925	669	88	1251
Scale. Weighing	J. F. Braselton	604,715	May 31	2755	630	88	1218
Scale-weight	F. L. Fuller	603,508	May 3	481	107	88	603
Scales, &c. Indicating or like mechanism for price	F. L. Fuller	603,504	May 3	484	107	88	604
Scales. Indicating or like mechanism for price	F. L. Fuller	603,505	May 3	489	108	88	605
Scales. Indicating or like mechanism for price	M. C. Ogden	606,472	June 28	2675	616	88	1919
Scissors or shears. Sheet-metal	F. M. Tenney	604,807	May 31	2895	668	88	1246
Scoop-board							
Scourer: *See* Grain-scourer.							
Scouring, disintegrating, and separating machine	J. M. Case	601,726	Apr. 5	201	39, 40	88	40
Scow. Dumping	E. Lays	606,259	June 28	2337	541	88	1853
Scow. Dumping. Cotton	N. Stickney	605,769	June 14	1275	295	88	1616
Scraper and cultivator	E. W. Deveney	605,267	June 14	1154	267	88	1593
Scraper and grader. Wheeled dumping	W. C. Bradford	603,421	May 3	306	69	88	659
Scraper. Cotton	G. P. Dowling	603,495	May 3	318	71	88	660
Scraper. Cotton and corn	T. F. Dove	604,207	May 17	1808	405	88	1000
Scraper. Dirt	F. Grote	606,540	June 28	2805	646	88	1945
Scraper for roadwork or ditching	J. E. Rich	606,580	June 28	2872	661	88	1909
Screen: *See* Fly-screen. Window-screen.							
Screens, &c. Detachable foot for	W. J. Quarry	604,215	May 17	1814	407	88	1003
Screw	P. W. Cassil	603,891	May 10	1185	266	88	846
Screw-cutting die-head	K. Mischke	603,283	June 28	2216	509	88	1885
Screw-cutting machine	J. Reymond and A. Poincenot	603,689	Apr. 19	1911	425 / 426	88	388
Screw-dies. Machine for milling variable grooves in	A. Urban	603,884	Apr. 26	2286	506 / 507 / 508	88	470
Screw driver and drawer	G. B. Jocelyn	604,260	May 17	1876	430	88	1014

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Screw for aerial ladders, &c. Elevating-	A. W. La France	602,262	Apr. 12	1168	257	83	235
Screw machine. Metal-	W. S. Davenport	604,306	May 17	1984	445 446	83	1065
Screw-machines or lathes. Box-tool for	J. P. Lavigne	602,908	Apr. 26	2286	521	83	478
Screw-slotting machine	H. Hubbell	602,268	Apr. 12	1218	298 299	83	245
Scrubbing appliance	F. W. Richter	601,678	Apr. 5	97	19	83	21
Scutching-machine feeder	E. G. A. Schenson	606,476	June 28	2679	617 618	83	1080
Scuttle or skylight operator	F. Hayes	606,057	June 21	1891	435	83	1746
Seal	T. N. Fisher	602,129	Apr. 12	981	208	83	188
Seal-bolt	P. C. Dockstader	601,770	Apr. 5	285	55	83	55
Seal. Bottle safety-	A. L. Elder	603,559	May 3	583	129	83	714
Seal-breaking instrument. Car-	T. A. Leyendecker	605,730	June 14	1219	282	83	1605
Seal-lock	P. C. Dockstader	605,377	June 7	430	95	83	1432
Seal-lock	J. Dowling	606,408	June 28	2563	508	83	1696
Seal-lock	W. K. Edgar	605,278	June 7	422	95	83	1432
Seal-lock	M. E. Kanaly	606,418	June 28	2589	507	83	1908
Seal-lock	J. W. Stevens	604,433	May 24	2326	496	83	1101
Seal-lock	L. Schafer	602,915	Apr. 26	2303	525	83	481
Seals for bottles. Apparatus for recrimping crown-	G. W. Gomber	604,467	May 24	2329	522	83	1114
Sealing device	G. W. Gomber	605,709	June 14	1193	275	83	1600
Sealing device	J. Berneis	603,085	Apr. 26	2300	567	83	519
Sealing device for bottle-stoppers	H. T. Sundstrom	603,458	May 3	374	85 86 87	83	672
Sealing machine. Newspaper-	J. Gersant and A. G. Buttlfant	605,604	June 14	1000	231	83	1563
Sealing metal boxes, &c. Means for hermetically	J. E. Fisher	604,675	May 24	2060	609	83	1188
Seam-ripping device							
Seat: *See* Couch-seat. Spring-seat. Lecture-room seat. Window-cleaning seat.							
Secondary battery	C. Brault	605,695	June 14	1169	269	83	1595
Secondary battery	F. W. Schneider	602,172	Apr. 12	1019	224	83	205
Sectional boiler	H. H. Taylor	606,313	June 28	2568	552	83	1699
Seed and fertilizer distributer	S. L. Allen	603,476	May 3	421	93, 94	83	661
Seed-cleaning machine. Cotton-	J. A. Lewis	603,448	May 3	353	80	83	668
Seed conveyer. Cotton-	H. W. Graber	603,185	Apr. 26	2758	627	83	569
Seed-drill	W. Stephenson	603,862	May 10	1134	255	83	887
Seed-drill-disk shoe	W. Stephenson	603,863	May 10	1134	255	83	887
Seed separator. Cotton-	J. A. Garrett	606,593	June 28	2792	645	83	1943
Seeding-machine	E. Christman, T. Brennan, Jr., and L. W. Homire.	602,827	Apr. 26	2154	489	83	454
Seeding-machine	K. Puskás	606,475	June 28	2678	617	83	1080
Seeding-machine	W. W. Schultz	605,348	June 7	564	125	83	1460
Seine-pursing machine	C. H. Gaffney	604,312	May 17	1998	448	83	1059
Self-lubricating engine	E. E. Hanna	606,543	June 28	2809	647	83	1945
Self-oiling wheel	I. R. Titus and J. W. Ensign	602,379	Apr. 12	1363	305	83	274
Separating apparatus	A. F. McClatchey and C. L. Krum	602,515	Apr. 19	1595	365 366	83	338
Separating laminated packs. Machine for	T. A. Dobbins	606,522	June 28	2750	695	83	1985
Separator: *See* Grain-separator. Seed-separator. Metal-separator. Steam-separator. Ore-separator.							
Separator	O. M. Morse	606,292	June 28	2342	542 543	83	1654
Separator and concentrator	C. E. Crowell and M. F. Gale	603,319	May 3	196	30	83	666
Sewer catch-basin	J. W. Hershberger	601,794	Apr. 5	350	66	83	22
Sewer construction	G. E. Waring, Jr	601,742	Apr. 5	286	46	83	46
Sewing-machine	F. Chase	605,040	May 31	3363	754	83	1321
Sewing-machine	F. O. Jerram	603,988	Apr. 26	2427	552 553	83	505
Sewing-machine	L. Muther and E. C. Holland	605,285	June 7	505	112 113	83	1449
Sewing-machine	C. H. Willcox, C. Carleton, and S. Borton.	603,986	May 10	1284	305 306	83	876
Sewing-machine	C. H. Willcox, J. E. A. Gibbs, and S. Borton.	603,989	May 10	1339	307	83	877
Sewing-machine attachment	C. Schneider	604,161	May 17	1712	386	83	992
Sewing-machine bobbin or under-thread case	L. A. Miller	601,597	Apr. 5	405	85	83	76
Sewing-machine brake	J. R. Weaver	601,698	Apr. 5	122	24	83	96
Sewing machine. Buttonhole-	J. C. Goodwin	606,904	June 28	2161	496 497 498	83	1817
Sewing-machine feeding mechanism	G. H. Dimond and W. F. Dial	604,005	May 10	1421	316	83	807
Sewing-machine folding-guide	L. Muther	605,294	June 7	504	112	83	1448
Sewing-machine for hemstitching	G. H. Dimond	605,700	June 14	1178	271	83	1597
Sewing-machine-looper-actuating mechanism	F. H. Richards	602,105	Apr. 12	998	194	83	180
Sewing-machine needle-guard	O. Bellefeuille	605,100	Apr. 26	2020	505	83	541
Sewing-machine. Overseam	F. Malech	605,993	Apr. 26	2425	555	83	507
Sewing-machine presser-clamp. Buttonhole-	J. Laird	606,425	June 28	2600	599	83	1904
Sewing-machine presser-foot	G. W. Stevenson	601,861	Apr. 5	472	95	83	88
Sewing-machine presser-foot and throat-plate	C. McNeil	605,449	June 7	736	167	83	1494
Sewing-machine ripping attachment	M. Talen and G. H. Croft	602,981	May 10	1259	295	83	859
Sewing-machine shuttle	M. F. Burroughs	606,443	June 28	2631	605	83	1911
Sewing-machine stop-motion	L. Schultz	602,876	Apr. 26	2223	508	83	467
Sewing-machine thread-cutter	V. Heiser and S. R. Moyer	606,010	June 21	1803	415	83	1730
Sewing-machine thread-trimming device	H. E. Hawes	603,668	May 10	812	179	83	775
Sewing-machine thread-waxing device	J. E. Bertrand	603,359	May 3	196	45	83	699
Sewing-machine threader	L. J. Bowman	606,999	June 28	2806	634	83	1947
Shade adjuster. Window-	F. L. Bailey	606,993	June 28	2890	652	83	1946
Shade-bracket holder. Window-	P. N. Rademann	606,995	June 28	2855	645	83	1857
Shade carrier. Window-	H. L. Keyes	603,403	May 3	373	61	83	668
Shade-holder	M. D. Greengard	601,599	Apr. 5	366	88	83	75
Shade-roller	E. F. Harishorn	603,908	May 10	1306	278	83	851
Shade-support. Adjustable	J. N. Reinhard	602,104	Apr. 12	991	198	83	180
Shade supporter. Window-	J. A. Hillman and H. M. Reed	603,059	Apr. 26	2286	576	83	586

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Shade-trimmer	J. B. Hinthorn	606,548	June 28	2819	649	83	1948
Shade. Window-	J. S. Judge	604,329	May 17	2027	454	83	1043
Shaft-adjusting device	L. E. Warner	603,353	May 3	187	42	83	636
Shaft and disk. Combined crank	A. L. Ide	601,995	Apr. 5	367	141	83	126
Shaft-hanger	F. Bebout and J. H. Brandon	606,327	June 28	2410	559	83	1866
Shaft-hanger	S. Coffin	601,885	Apr. 5	508	105	83	96
Shaft. Vehicle-	W. G. Davis	605,682	June 14	1057	243 244	83	1573
Shafts. Apparatus for making crank-	C. F. Roper	604,367	May 17	1911	428	83	1021
Shafts, tubes, &c. Machine for straightening	H. W. Hill	606,214	June 28	2183	502 503	83	1821
Sharpener. Disk-	A. Christopherson	603,172	Apr. 26	2733	622	83	565
Sharpener. Knife-	J. W. Mallot	602,192	Apr. 12	1057	231	83	213
Sharpener. Knife-	F. R. Miller	602,994	Apr. 26	2457	556	83	507
Sharpener. Knife-	J. R. Williams	602,790	Apr. 19	2069	470	83	428
Sharpener. Knife-	M. L. Hawks	605,289	June 7	447	99	83	1457
Sharpener. Knife, scissors, or skate	T. H. Bradbury	603,887	May 10	1178	266 267	83	846
Sharpener. Rock-drill	H. C. Lausen	604,118	May 17	1639	367	83	908
Sharpener. Scissors-	A. N. Clark	606,000	June 21	1776	407	83	1736
Sharpener. Tool-	A. B. Doty	606,333	June 28	2428	561	83	1871
Sharpening lawn-mowers. Attachment for	J. E. Denham	606,194	June 28	2143	492	83	1814
Shearing and punching machine							
Shears: *See* Doubling-shears. Sheep-shears.							
Shears	A. Prohaska	602,360	Apr. 12	1331	296	83	968
Shears and buttonhole-cutter. Combination	C. Coates	606,123	June 21	2013	461	83	1770
Shears, &c. Mechanism for operating animal-	J. K. Stewart	604,809	May 31	3005	690	83	1349
Sheep-shears	H. B. Burke	604,821	May 31	2915	667	83	1376
Sheet-metal can	A. R. Waller	602,648	Apr. 19	1830	417	83	225
Sheet-metal handle. Single-piece	J. W. Greene	602,234	Apr. 12	1120	246 260	83	238
Sheet-metal straightening and cutting-off machine	F. B. Shuster	602,273	Apr. 12	1186	261 342	83	945
Sheet-metal-working machine	F. M. Leavitt	604,057	May 17	1522	343	83	256
Shelf and table. Combined	C. O. Hadly	602,321	Apr. 12	1271	281	83	788
Shelves and table. Convertible	E. B. Weston	603,715	May 10	854	190	83	1437
Shelving, stack, &c. Library	D. E. Hunter	605,291	June 7	448	99 100	83	176
Shell. Vacuum-protected high-explosive	R. J. McKeone	602,092	Apr. 12	869	189	83	
Sheller: *See* Corn-sheller.	E. H. Krüger	606,422	June 28	2598	599 600	83	1904
Shingle-sawing machine	G. F. Steedman	603,926	May 10	1246	294	83	858
Shingle-sawing machine	I. Hosier	606,144	June 21	2055	471	83	1778
Shingling-bracket	W. I. Babcock, S. T. and C. H. Wellman, and J. W. Seaver.	606,497	June 28	2713	625	83	1927
Ship-building plant	W. P. Freeman	606,199	June 28	2152	494	83	1816
Ship-calking instrument	M. H. C. and R. E. C. Shann	606,306	June 28	2371	548 549	83	1800
Ship-frame-bending apparatus	J. G. Fox	602,436	Apr. 19	1468	333	83	209
Shipping-box	E. E. Hamilton	604,388	May 24	2139	480	83	1085
Shipping box or crate	E. Norton	602,469	Apr. 19	1525	347 346	83	330
Shipping box or package	E. Norton	602,468	Apr. 19	1523	347	83	319
Shipping-can	E. Norton	602,766	Apr. 19	2069	460	83	415
Shipping-can. Wood-veneer-jacketed	J. W. Cooper	604,970	May 31	3161	727	83	1297
Shirt-bosom. Detachable	W. B. Keighley	604,051	May 17	1503	338	83	943
Shoe-buffer	N. D. Daboll	602,827	Apr. 26	2258	514	83	473
Shoe dip and polisher	G. W. Burford	606,052	Apr. 26	2565	574	83	594
Shoe-fastener	J. Stech	602,147	Apr. 12	972	212 309	83	196
Shoe-fastener	O. Ashton	602,390	Apr. 12	1384	310 311	83	279
Shoe-nailing machine	E. E. Canedy	604,875	May 31	3013	669	83	1208
Shoe-rack	W. D. Hancock	604,917	May 31	3089	710	83	1288
Shoestring-holder	S. Ross	606,301	June 28	2357	545	83	1857
Shoe-upper turning and beading machine	T. B. Lovdal	601,663	Apr. 5	70	14	83	14
Shore-protector	G. W. Greer	604,581	May 24	2305	570	83	1158
Shoulder-stick							
Shovel: *See* Cultivator-shovel. Snow-shovel.							
Shovel-handle. Sheet-metal	W. Shirray	601,997	Apr. 5	698	148	83	128
Shoveling-board	N. A. Crusan	601,696	Apr. 5	92	5	83	6
Show-case	F. C. Bate	603,312	May 3	115	27	83	634
Show-case. Transferable	J. C. Spraggins	603,210	Apr. 26	2794	636	83	576
Show-stand	M. Rahn	603,208	Apr. 26	2755	625	83	574
Shredder	L. L. Lamb	601,712	Apr. 5	177	34	83	35
Shredding-knife	E. H. Ward	604,513	May 31	2904	664	83	1247
Shutter-controller	C. B. Harkness and W. T. Crowell	603,223	Apr. 12	1274	283	83	257
Shutter-fastener	G. M. W. Kohl	602,661	Apr. 19	1803	423	83	388
Shutter-fastener	J. G. Lane	604,053	May 17	1507	339 288	83	943
Sieve or bolting-machine. Oscillating	C. H. Loutzenhiser	602,341	Apr. 12	1299	289 290	83	202
Sieves. Oscillating support for shaking-	F. H. Schule	605,924	June 21	1696	374	83	1700
Sifter. Ash-	J. H. and E. W. Counties	603,208	May 10	1188	266	83	847
Sifter. Ash-	J. Payette	603,704	May 10	837	185	83	760
Sifter. Portable coal-	L. Buchtel	605,175	June 7	210	58	83	1300
Sign	C. E. Starr, Jr	603,098	Apr. 26	2608	598	83	530
Sign. Corner street-	G. G. Cockburn	603,427	Apr. 19	1449	328	83	305
Sign. Electrical	M. Norden	606,356	June 28	2470	574	83	1879
Signal: *See* Boiler-signal. Railway-signal. Mailing-signal. Railway-crossing signal. Pot signal.							
Signal	J. P. Coleman	604,303	May 17	1974	443	83	1083
Signal	J. P. Coleman	604,304	May 17	1976	443	83	1084

Skate. Roller	F. J. Sulke	604,179	May 17	1757	395	83	992
Skins. Machine for pulling or plucking rabbit	J. and F. Taylor	606,355	June 28	2262	527	83	1643
Skirt-lifter	B. M. Fergus	604,310	May 17	1996	447	83	1038
Skirt-lifter	M. R. Lucas	606,567	May 3	598	132	83	716
Skirt-protector material	W. F. Wyman	604,818	May 31	2910	666	83	1246
Skirt-supporter	M. N. Anderson	605,465	June 14	757	174	83	1519
Skirt-supporter	M. Gair	606,760	May 10	928	206	83	797
Skylight-lifter	S. I. Howard	604,473	May 24	2306	524	83	1116
Sled	W. S. Evans	606,758	May 10	923	205	83	796
Sleigh	T. G. Mandt	605,676	June 14	1137	263	83	1589
Smelting. Copper	G. W. Reese	608,590	May 3	629	264	83	724
Smelting-furnace	H. Lang	604,054	May 17	1508	339	83	943
Smelting phosphorus	C. K. Harding	602,747	Apr. 19	1998	340	83	408
Smelting plant. Continuous	W. S. Reese and E. E. Armstrong	605,451	June 7	739	453	83	1495
Smelting plant. Continuous	W. S. Reese and E. E. Armstrong	605,464	June 7	754	167	83	1498
Smoke-bell	T. C. O. Sherk	605,234	June 7	398	178	83	1413
Smoke-condenser	J. C. Green	605,280	June 7	435	96	83	1433
Smoke-consumer	H. L. Thomas	604,240	May 17	1858	416	83	1010
Smoke-consuming furnace	L. A. Sears and F. Rice	602,902	Apr. 26	2396	544	83	498
Smoke-generator	T. Thomson	606,315	June 28	2366	558	83	1663
Smoothing and pressing iron	J. Manning and J. R. S. Hayes	604,060	May 17	1528	343	83	947
Snap-hook	A. Ryan	608,298	May 3	75	19	83	616
Snap-hook. Hand	J. Nurnberger, Jr	608,238	Apr. 26	2350	650	83	586
Snow-guard	H. M. Esselen	602,901	Apr. 26	2399	517	83	475
Snow-guard	G. F. Folsom	602,963	Apr. 26	2420	551	83	504
Snow-plow	W. R. Lloyd	601,805	Apr. 5	226	109	83	99
Snow-shovel	J. Gifford	606,534	June 28	2795	645	83	1943
Soap-crutching machine	F. B. and S. C. Strunz	604,671	May 24	2654	608	83	1181
Soap-holder	M. Peraglie and F. Barro	606,024	June 21	1830	422	83	1735
Soap-holder for tubs	E. H. Lobdell	601,602	Apr. 5	68	13	83	14
Soap-making apparatus	F. Arledter	605,988	June 21	1759	408	83	1723
Soap-plotting machine	F. S. Rutschman	603,411	May 3	289	64	83	655
Soap-press	H. E. Swartz	604,486	May 24	2234	501	83	1103
Soap-receptacle	C. Schreiner	605,976	June 21	1734	399	83	1719
Soaring-machine	W. P. Butusov	606,187	June 28	2196	488	83	1610
Socket-bolt	E. L. A. Cureau	602,178	Apr. 12	1028	225	83	207
Socket-joint or coupling for rods, &c	J. Ephraim	605,541	June 14	870	204	83	1541
Soda. Apparatus for making caustic	W. F. Jobbins	605,102	June 7	61	18	83	1364
Soda. Apparatus for making caustic	F. B. Strunz	604,670	May 24	2652	606	83	1181
Soda-water apparatus	J. F. Haines	602,257	Apr. 12	1163	255	83	234
Soda-water fountain	E. B. Mower	608,856	May 10	1123	256	83	835
Solar apparatus	W. Calver	608,317	May 3	121	28	83	625
Soldering-machine	B. H. Short	602,368	Apr. 12	1345	300	83	271
Sole-channeling and flap-turning machine	H. T. Crosby	602,980	Apr. 26	2417	550	83	503
Sole channeling machine. Boot or shoe	H. T. Crosby	602,979	Apr. 26	2415	550	83	503
Sole cutting-out and channeling machine	R. Reid	606,968	May 10	1304	298	83	870
Sole-laying machine	G. A. Moore and H. J. Rosegrant	606,176	June 21	2108	484	83	1766
Sole-leveling-machine attachment	C. S. Johnson and G. W. Spaulding	604,895	May 31	3027	695	83	1271
Sole-rounding machine	H. T. Crosby	602,211	Apr. 12	1065	238	83	218
Soles of boots, shoes, &c. Machine for stamping	A. Adcock	604,106	May 17	1618	363	83	964
Soles to uppers. Machine for nailing	O. Ashton	602,184	Apr. 12	1038	227	83	209
Solitaire, button, &c	W. West	604,815	May 31	2906	665	83	1248
Sound-locating instrument	L. E. Thorne	605,081	May 31	3269	751	83	1818
Sound-reproducing machine	J. W. Jones	604,889	May 31	2949	670	83	1252
Sound-reproducing machine	J. W. Jones	605,484	June 14	786	180	83	1534
Sower. Seed	J. A. Gleixner	602,668	Apr. 19	1897	438	83	389
Spark-arrester	M. Goetze	606,184	June 21	2096	466	83	1774
Spark arrester	J. W. Troutt	605,363	June 7	508	128	83	1465
Spark-catcher	P. Hagemann and H. Pasler	605,878	May 3	228	51	83	644
Spark-extinguisher	M. Pschorr	605,151	June 7	103	28	83	1372
Speaking-tube	T. Fales	604,694	May 24	2704	618	83	1190
Spectacle eye guard or shield	P. Nerney	604,238	May 17	1856	415	83	1010

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Spectacle-frame	F. L. Burrows	606,272	June 28	2308	535	83	1648
Spectacle or eyeglass case	J. Casey and M. S. Chism	602,825	Apr. 26	2151	499	83	453
Spectacles	G. Bausch. (Reissue)	11,668	May 17	2065	467	83	1055
Spectacles	A. L. Greene	606,263	June 28	2257	530	83	1858
Spectacles	S. J. Clulee	604,186	May 17	1671	375	83	974
Spectacles or eyeglasses. Frameless	K. Hohmann	605,715	June 14	1208	277	83	1602
Speculum	M. A. Replogle	605,014	May 31	3225	744	83	1312
Speed-governor	M. A. Replogle	608,345	May 3	176	41	83	636
Speed-governor. Mechanical	L. S. Starrett	601,800	Apr. 5	235	68	83	68
Speed-indicator	V. Bélanger	605,845	June 21	1475	338	83	1670
Speed mechanism. Change	M. O. Reeves	608,067	Apr. 26	2556	580	83	529
Speed-varying mechanism	E. A. S. Clarke	604,728	May 31	2770	581	83	1228
Spiegel or similar metallic alloy. Producing	V. R. Paige	602,955	Apr. 26	2377	542	83	497
Spike	A. F. Jackson	602,048	Apr. 5	795	179	83	150
Spike-extractor							
Spindle: *See* Spinning-spindle.							
Spindle	J. Duffy	602,254	Apr. 12	1155	253	83	232
Spindle and bearing	W. I. Stimpson	601,846	Apr. 5	444	90	83	83
Spindle-bearing	G. O. Draper	605,708	June 14	1183	278	83	1598
Spindle-bearing	W. M. Rushworth and T. Higginbottom.	602,110	Apr. 12	901	195	83	183
Spindle-support	E. H. Ryon	602,171	Apr. 12	1018	223	83	205
Spindles. Doffer-guard and stopper for lubricating-tubes for	J. W. Wattles	604,446	May 24	2247	504	83	1105
Spinning and twisting machine spindle	J. E. Prest	604,194	May 17	1778	401	83	996
Spinning-machine heart-motion	G. W. Chadwick	602,808	Apr. 12	1242	273	83	250
Spinning machine. Wool	W. W. New	605,208	June 7	271	63	83	1401
Spinning-mule yarn-guide	J. D. Whyte	604,593	May 24	2321	574	83	1155
Spinning-spindle	W. Hinchliffe	602,987	Apr. 26	2426	559	83	505
Spinning textile fibers. Apparatus for	R. Todd and J. A. Stott	603,068	Apr. 26	2558	581	83	530
Spirit. Purifying	L. Maiche	604,998	May 31	3208		83	1306
Spittoon	A. Rosenberg	604,218	May 17	1817	408	83	1008
Spittoon. Fountain	T. N. Clark	604,698	May 24	2703	617	83	1189
Splint. Self-retaining	B. Scheinkman	602,917	Apr. 26	2393	525	83	482
Spoke and felly adjuster	J. N. Rachels	602,208	Apr. 12	1178	259	83	237
Spoke-expander and wheel-tightener	J. Kelley	606,014	June 21	1809	417	83	1731
Spoke-making machine. Metal	W. G. Allen	605,050	May 31	3300	757	83	1394
Spoke-socket	W. O. Jones	608,653	May 10	1119	756	83	884
Spokes for wheels. Manufacture of wire	J. Batey	602,931	Apr. 26	2328	252	83	489
Spool	S. Mather	604,540	May 24	2480	533	83	1137
Spool-stand	T. Mason	605,254	June 7	375	532	83	1422
Spraying device	G. A. Horn	604,151	May 17	1694	85	83	979
Spring: *See* Door-spring. Vehicle-spring. Heel-spring. Wagon-spring.					381	83	979
Spring-forming machine	C. Collins	603,175	Apr. 26	2739	633	83	566
Spring-seat	J. H. Cloyes	604,368	May 24	2114	474	83	1080
Spring-seat. Folding	F. G. Westland	602,798	Apr. 19	2066	469	83	428
Sprocket-rim. Removable	R. R. Suter	601,990	Apr. 5	700	149	83	132
Sprocket-wheel	L. and E. W. Cooper	605,448	June 7	725	183	83	1403
Sprout-puller and wagon-jack. Combined	D. E. Copp	604,054	Apr. 26	2527	574	83	594
Stacker	F. W. Eltzroth	602,063	Apr. 19	821	178	83	167
Stacker fan. Pneumatic-straw	J. K. Sharpe, Jr	605,925	June 21	1628	374	83	1700
Stacker. Pneumatic	W. H. Cook	608,593	May 3	638	141	83	724
Stacker. Straw	H. R. Gregory and R. H. Batton	606,165	June 21	2091	481	83	1765
Stacker. Straw	W. A. Hinkle	608,040	Apr. 26	2507	569	83	520
Stacker. Straw	R. Moy	601,667	Apr. 5	75	15	83	17
Stacker. Swinging straw	E. Huber and J. W. Miller	606,059	June 21	1896	436	83	1747
Stage appliance	W. F. Carver	604,080	May 17	1433	437	83	993
Staircase for dwellings	H. E. Cassel	606,272	June 28	2310	325	83	1648
Stair-rail	S. Hunter	606,147	June 21	2095	535	83	1778
Stairs, &c. Tread for	C. W. Locke	605,738	June 14	1235	478	83	1605
Stairway nosing-strip	F. Furness	606,583	June 28	2762	378	83	1943
Stamp. Hand	H. O. Reich and C. I. Van Dyke	602,957	Apr. 26	2370	644	83	497
Stamp-mill	E. Reynolds	604,503	May 24	2268	543	83	1135
Stamp-mill feeder	G. Wood	605,393	June 7	408	536	83	1488
Stamp-money and letter packet	C. A Thompson	603,118	Apr. 26	2549	91	83	545
Stamp. Ore	D. M. Smyth	605,615	June 14	1017	608	83	1597
Stamp-pad	W. A. Echelberger	608,061	Apr. 12	814	284	83	166
Stamp. Printing	L. R. Blackmore	605,945	June 21	1671	176	83	1708
Stamp. Time	J. G. Blessing	602,026	Apr. 5	757	163	83	143
Stamps, &c. Coin-freed apparatus for delivering	E. J. P. Gallwey	601,882	Apr. 5	405	164	83	95
Stamps, sealing letters, &c. Device for attaching	W. F. Johnston	602,806	Apr. 19	2109	476	83	429
Stamping and crushing mill. Ore	R. F. Parker	602,956	Apr. 19	1326	204	83	267
Stanchion. Cattle	G. L. Nichols	605,005	May 31	3221	741	83	1309
Stand: *See* Camera-stand. Show-stand. Display-stand. Tripod-stand.							
Stand or chair base	J. W. Coultas	608,677	May 10	796	175	83	772
Standard	C. J. Shaw	604,796	May 31	2879	658	83	1243
Staple driving and clenching machine	V. Zwissler	608,426	May 3	636	75	83	665
Staple-extractor	C. G. Mitchell	608,911	Apr. 26	2398	522	83	480
Stapling-machine	F. S. Bradley	608,121	Apr. 12	916	200	83	186
Starch-draining apparatus	J. Hundhausen	608,447	May 3	353	201	83	667
Starching-machine	A. T. Hagen and D. M. Cooper	606,411	June 28	2568	594	83	1697
Starching-machine	A. R. Selden	605,751	June 14	1232	595	83	1611
Starting device	J. P. Stone and S. E. Doane	608,778	May 10	992	200	83	803
Station-indicator	E. H. B. Chew	606,351	June 28	2494	215	83	1670

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Station-indicator	O. Ledowsky	605,318	June 7	496	110	83	1447
					111		
Station-indicator	H. C. Turner	605,988	June 21	1653	379	83	1705
Station-indicator	W. A. Turner	604,483	May 24	2328	528	83	1119
Stay and fastener	P. A. Dailey	605,402	June 7	667	148	83	1461
Stay-bolt	J. Johnson and W. V. Lukens	602,402	Apr. 12	1409	316	83	994
Steam. Apparatus for regulating superheated	W. Schmidt	604,547	May 24	2444	555	83	1130
Steam. Apparatus for vaporizing and superheating water contained in	W. Fehrmann	604,594	May 24	2396	545	83	1130
Steam-boiler	C. H. Fox	603,492	May 3	435	96, 97	83	665
Steam-boiler	N. G. Herreshoff	605,784	June 14	1395	306	83	1096
Steam-boiler	N. G. Herreshoff	605,785	June 14	1397	306	83	1096
Steam-boiler	N. G. Herreshoff	605,786	June 14	1399	306	83	1097
Steam-boiler	E. J. Moore	605,791	June 14	1392	309	83	1099
					310		
Steam-boiler	W. Hopkins	605,427	June 7	705	157	83	1466
Steam-boiler and furnace therefor	O. Abraham	602,418	Apr. 19	1435	324	83	908
Steam-engine	S. and S. R. Chatwood	602,426	Apr. 19	1448	328	83	905
Steam-engine	W. F. and E. W. Cleveland	602,392	Apr. 12	1389	311	83	990
					313		
Steam-engine	H. M. Lane	605,885	June 21	1556	358	83	1667
Steam-engine	C. A. Maurer	603,594	May 3	226	53, 54	83	646
Steam-engine	J. A. Reardon	604,415	May 24	2190	490	83	1095
					491		
Stool for stores. Counter-	G. A. Coulson and J. McCaw	602,210	Apr. 12	1084	237	83	916
Steam-generating apparatus	H. Hennig	601,798	Apr. 5	326	66	83	66
Steam-generator	D. A. Casalonga	605,997	June 21	1771	406	83	1735
Steam-generator	C. H. Fox	603,502	May 3	478	106	83	668
Steam-generator	J. B. Loquet and J. B. Ketelair	605,495	June 14	606	166	83	1586
Steam-generator	E. Makin, Jr	604,496	May 24	2352	533	83	1132
Steam-generator	C. T. Murray	605,895	June 21	1570	361	83	1669
					643		
Steam-generator	O. D. Orvis	603,228	Apr. 26	2818	644	83	560
					645		
Steam-generator	J. I. Thornycroft	603,800	May 10	1004	224	83	812
					225		
Steam-generator	L. De Naeyer	601,790	Apr. 5	324	65	83	61
Steam-generator. Water-tube	F. Seaver	603,660	May 10	765	170	83	795
Steam-motor	J. B. Johnston and C. B. Little	604,886	May 31	3039	695	83	1271
Steam or hot-water boiler	F. G. Saylor	604,088	May 17	1583	354	83	987
					355		
Steam or hot-water grate and generator	F. Succie	601,687	Apr. 5	117	23	83	25
Steam or hot-water heater	W. B. Crichton	604,109	May 17	1681	364	83	995
					365		
Steam or other fluid-pressure engine	F. B. Corey	606,190	June 28	2139	491	83	1813
Steam-separator	N. Nilson	602,866	Apr. 26	2212	501	83	1465
Steam-separator	G. I. Roberts	604,844	May 31	2955	677	83	1257
Steam-separator	C. R. Franklin	602,657	Apr. 19	1842	420	83	978
Steam-trap	B. W. Hill	604,980	May 31	2990	686	83	1263
					687		
Steam-trap	B. Thoens	603,980	May 10	1322	302	83	845
Steam-trap	C. H. Bartlett	603,985	May 10	1174	305	83	845
Steelyard	H. O. F. Bindemann	603,596	May 10	1175	306	83	519
Steering apparatus. Electrical	W. H. Harfield	605,098	Apr. 26	2504	508	83	21
Steering-gear. Steam	J. and H. W. Ritchie	601,679	Apr. 5	100	20	83	
Steering mechanism for vessels. Hydraulic	A. C. Thomas and C. M. Hamilton	604,506	May 24	2368	537	83	1126
					538		
Stenciling-machine. Rotary	H. C. Swan	605,357	June 7	576	127	83	1462
Step-pad	C. T. Murray	605,894	June 21	1568	361	83	1669
Stereotype-plate	A. Moyet	605,736	June 14	1296	296	83	1606
Sterilizing apparatus	C. Steenken	604,801	May 31	2887	660	83	1244
Stirrup	J. W. Thorn	606,366	June 28	2487	578	83	1852
Stirrup. Safety-	J. Lee	602,859	Apr. 26	2208	499	83	468
Stitch indenting and separating machine	J., Sr., T., and J. Vicars, Jr	606,607	June 28	2918	677	83	1908
Stoker. Mechanical	G. Wincqz and H. Machepy	602,890	Apr. 26	2246	511	83	471
Stone-cutting machine	H. H. Cummings	601,789	Apr. 5	320	63	83	61
					64		
					65		
Stone-sawing machine	L. H. and G. C. Roby	602,773	Apr. 19	2089	462	83	417
Stool and chair. Convertible piano	H. B. Banes	605,617	May 10	998	155	83	751
Stool. Piano-	J. K. Wright	602,384	Apr. 12	1370	307	83	976
Stop device. Automatic safety	W. Nutt	605,125	June 7	97	26	83	1370
Stopper:	H. V. R. Read	602,909	Apr. 12	1179	260	83	227
See Bottle-stopper. Jug-stopper. Flue-stopper.	E. A. Barber	603,220	Apr. 26	2834	647	83	558
Stopper	H. S. Lloyd	604,588	May 24	2514	572	83	1138
Stopper for discharge of aerating capsules	G. A. Washburn	602,176	Apr. 12	1086	235	83	907
Storage battery	E. C. Cole	604,055	May 24	2022	500	83	1175
Storage battery	F. J. Gould	602,577	Apr. 19	1007	266	83	351
Storage battery	C. T. Litchfield and J. T. Baugher	604,901	May 31	3196	735	83	1204
Stove	J. N. Morse	602,113	Apr. 26	2043	600	83	546
Stove	F. C. Wilson	602,116	Apr. 12	914	199	83	165
Stove	J. W. and W. W. Wilson	605,087	May 31	3277	753	83	1319
Stove. Air-tight heating-	J. S. Van Buren	602,599	Apr. 19	1621	370	83	386
Stove and grate	C. H. Boeck	602,124	Apr. 26	2661	604	83	550
					605		
Stove. Blue-flame oil-	F. B. Charroin	605,999	June 21	1774	407	83	1736
Stove. Camp-	S. B. Palmer	602,998	Apr. 26	2443	557	83	505
Stove. Combined wood and straw burning heating and cooking	A. W. Walker	605,208	June 7	472	106	83	1441
Stove. Cooking-	R. Pringle	605,011	May 31	3280	743	83	1311
Stove for cooking purposes, &c. Gas-	J. Langfield	605,795	June 14	1313	280	83	1603
Stove. Gas-	A. L. Pitney	603,456	May 3	371	84	83	672
Stove. Gas-	P. G. Van Wie	602,041	Apr. 5	784	170	83	148
Stove. Gasolene-	G. B. Murrell	603,458	May 3	364	88	83	670

Swinging gate							
Switch: *See* Automatic switch. Automatic-lever switch. Clock-controlled switch. Electric switch. Electric-motor switch. Electrically-controlled switch. Frogless switch. Overhead switch. Railway-switch. Telephone throw-off switch. Trolley-switch.	R. W. Rollins	605,915	June 21	1613	371	83	1697
Switch mechanism. Electric clock-controlled	G. B. Barron	606,499	June 28	2716	635	83	1926
Switch-operating device	E. P. Owen	604,789	May 31	2955	653	83	1266
Switch throwing and locking apparatus							

Alphabetical list of inventions, April to June, inclusive—Continued.

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Switch-throwing mechanism. Pneumatic	G. R. Bartholomew	605,691	June 14	1162	268	88	1594
Switching device and circuit arrangement for electrically-propelled vehicles.	E. B. W. Reichel	605,013	May 31	3233	269 744	88	1312
Sword-slinging hook	J. Pettibone	606,586	May 3	551	121	88	707
Syringe	H. E. Cook	605,052	May 31	3305	759	88	1285
Syringe	E. Fournier	605,476	June 14	773	178	88	1562
Syringe	J. Gray	604,147	May 17	1690	380	88	978
Syringe	W. L. Whittington	604,645	May 24	2608	596	88	1172
Syringe	F. C. Ferguson	605,178	June 7	215	53	88	1391
Syringe. Fountain	A. F. Henry	606,751	Apr. 19	2006	454	88	410
Syringe. Vaginal	E. Seibert	605,688	June 14	1146	266	88	1591
Syringe. Vaginal							
Table: *See* Billiard-table. Dining-table. Extension-table. Invalid-table. Ironing-table. Pool-table. Surgical table.							
Table	A. N. Heine and G. A. Nonweiler	604,322	May 17	2015	451	88	1041
Table	B. M. Hirsh	606,142	June 21	3050	469 470	88	1777
Table	H. Korell	604,706	May 31	3832	549	88	1233
Table	D. R. Cutler	601,637	Apr. 5	35	5	88	7
Table and game-counter. Combined	F. T. Heatly	605,100	June 7	59	18	88	1364
Table attachment for chairs or beds	A. R. Bishop	606,257	June 28	2303	333	88	1947
Table-cloth supporter	G. H. Brabrook	606,183	June 28	2123	497	88	1809
Tableware. Flat metal	J. Cornelius	603,231	Apr. 26	2837	647	88	564
Tablet-machine	C. W. Eader	603,626	May 10	710	158	88	755
Tack-driver	J. H. Ferguson	603,068	Apr. 12	830	180	88	168
Tack-driver. Hand	A. E. Stirckler	606,506	June 28	2999	670 671	88	1963
Tack-driving apparatus	F. W. Songer	603,146	Apr. 12	971	212	88	195
Tack-holder	J. B. Richards	603,365	May 3	205	47	88	641
Tag-fastener	G. Smedeman	602,112	Apr. 12	904	196	88	183
Tamping-machine	C. Iredell	602,331	Apr. 12	1285	285	88	350
Tanbark-leaching apparatus							
Tank: *See* Flushing-tank. Water-tank. Water-closet tank.							
Tanning	D. M. Easton	604,739	May 31	2786	638	88	1225
Tanning. Process of and apparatus for electrolytic	E. Davis and H. R. Mustard	603,263	May 3	36	10	88	606
Tapping apparatus	A. Berger and H. Hildenbrand	604,596	May 24	2593	575	88	1156
Tapping apparatus	J. N. Knapp	602,510	Apr. 19	1566	368	88	381
Tapping device. Beer-barrel	W. T. Fennan	601,749	Apr. 5	246	49	88	47
Tapping implement. Beer	A. Kopp	603,278	May 3	61	15	88	613
Target	W. F. Hochspeier	605,314	June 7	490	109	88	1445
Tea-packing machine	A. H. Canning	604,721	May 31	2763	632	88	1220
Teaching arithmetic. Apparatus for	A. R. Breinl	604,963	May 31	3151	725	88	1295
Telegraph-cables. Apparatus for joining	H. Menier	604,258	May 17	1890	423	88	1016
Telegraph-keys. Pneumatic attachment for	W. J. Lieb	604,770	May 31	2837	640	88	1234
Telegraph instrument	J. L. Cutler	606,449	June 28	2630	607	88	1913
Telegraph. Printing	B. A. Brooks	606,320	June 28	2412	559 560	88	1868
Telegraph system. Printing	J. Burry	601,768	Apr. 5	278	55	88	54
Telephone	T. F. Ahern	601,865	Apr. 5	477	96	88	89
Telephone circuit and apparatus	M. G. Kellogg	605,580	June 14	943	220 221	88	1555
Telephone-exchange. Automatic	W. Decker	604,373	May 24	2119	476	88	1081
Telephone-exchange system	W. W. Dean	606,162	June 21	2081	479	88	1788
Telephone-holder	J. T. Moore	605,294	June 7	455	101	88	1439
Telephone-lock	R. H. Allen	601,786	Apr. 5	316	62	88	60
Telephone-receiver	P. C. Burns	605,594	June 14	973	225	88	1559
Telephone signal system	W. A. Stilwell and A. Barneck	604,434	May 24	2298	499 500	88	1102
Telephone-switchboard cord-weight	F. C. Hughes	605,671	June 14	1129	261	88	1586
Telephone-switchboard plug	J. Taylor	604,094	May 17	1593	358	88	950
Telephone-switchboard system	F. C. Hughes	605,670	June 14	1124	260 261	88	1587
Telephone-switchboards. Automatic apparatus for	J. H. West	605,659	June 14	1108	254	88	1582
Telephone system	W. A. Gustafson	606,285	June 28	2331	540	88	1952
Telephone system	E. W. Ham	605,097	June 7	53	16, 17	88	1393
Telephone system	R. T. Reid and J. L. McDonnell	605,341	June 7	546	122	88	1457
Telephone throw-off switch	N. Fallek	603,681	May 10	901	177	88	773
Telephone-transmitter	F. A. Ray	605,913	June 21	1610	371	88	1697
Telephone-transmitter	H. E. Shreeve	602,174	Apr. 12	1023	224	88	206
Telephone-transmitter	W. E. Sundberg	605,892	June 14	1431	328	88	1644
Telephony and telegraphy. Multiple	R. Pfund	604,499	May 24	2356	534	88	1124
Telescopic case or traveling-bag. Enlargeable	K. Kruppa and O. Lehrer	606,221	June 28	2211	508	88	1927
Telescopic clamp	G. W. Kortright	605,447	June 7	785	166	88	1494
Temperature-controlling apparatus	R. S. Pease	604,077	May 17	1564	350	88	953
Temperature-regulating apparatus. Automatic	W. B. Loring	603,696	May 10	884	182 183	88	778
Temperature-regulator	A. Roesch	602,107	Apr. 12	806	194	88	181
Temperature-resistance changes. Means for compensating for	C. F. Scott	605,033	June 21	1844	435	88	1738
Tension device	H. P. Richards	602,522	Apr. 19	1608	366	88	336
Tent	T. C. Phelps	602,587	Apr. 19	1716	390 391	88	354
Tent-fastening	E. C. Cook	601,805	Apr. 5	343	70	88	64
Testing-cap and clamp	P. J. Cahill	602,381	Apr. 12	1304	284	88	242
Testing apparatus	L. C. Christie	603,874	May 10	1159	259	88	840
Testing-trap	D. Buist and E. Breakell	605,287	June 7	632	141	88	1473
Tether	J. Day	601,959	Apr. 5	646	136	88	122
Textile-roller clearer	R. S. Matteson	602,636	Apr. 19	1789	408	88	398
Thawing apparatus	R. B. Ormiston	605,556	June 14	897	209	88	1546
Thawing apparatus	D. Phillips	604,264	May 17	1907	437	88	1020
Therapeutical apparatus	A. V. M. Sprague	601,694	Apr. 5	108	21	88	22
Thermocauter	C. F. Dewitt	606,260	June 28	2512	583	88	1866

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Thill-coupling	A. L. Crandall	602,307	Apr. 12	1949	274	88	351
Thill-coupling	J. Edgar	605,665	June 14	1118	256	88	1585
Thill-coupling	F. A. and P. H. Kehm	601,798	Apr. 5	329	67	88	68
Thill-coupling	T. E. Kellogg	604,494	May 24	2349	533	88	1123
Thill-coupling	T. P. Kersey and E. W. Leach	602,969	Apr. 26	2429	554	88	506
Thill-coupling	J. J. Phillips	603,966	May 10	1302	307	88	909
Thill-coupling	Z. L. Wheeler	602,710	Apr. 19	1945	442	88	309
Thill-coupling	W. E. Sherwood	605,307	June 28	2375	549	88	1951
Thill-coupling. Antirattling	A. G. May	603,196	Apr. 26	2777	633	88	573
Thill coupling-bolt	C. T. Redfield	605,085	June 21	1950	449	88	1758
Thill-couplings. Antirattling nut-locking device for	J. Shurter	603,776	May 10	960	215	88	808
Thill-support and antirattler. Combined	J. H. Northrop	605,093	May 31	3319	762	88	1528
Thread-guide	M. A. L. Thomas	603,390	May 3	246	55	88	648
Thread holder and cutter for spools	H. W. Bracken	604,509	May 24	2530	576	88	1156
Thread or yarn guide	I. Heer	605,101	June 7	60	18	88	1364
Thread-tension device	G. D. Harder	604,319	May 17	2011	450	88	1040
Thresher or rubber binding attachment	J. Börsum	606,503	June 28	2722	627	88	1939
Threshing-machine	W. H. and J. Butterworth	603,494	May 3	312	71	88	660
Threshing-machine	T. S. Culbreath	606,125	June 21	2017	462	88	1771
Threshing-machine	M. H. Nash	605,048	May 31	3296	756	88	1333
Threshing-machine	F. J. Wood	604,281	May 17	1985	433	88	1038
Threshing-machine band-cutter and feeder	W. Stephenson	603,978	May 10	1319	302	88	573
Threshing-machine feeder	A. R. McMullen	605,227	June 7	508	114	88	1449
Threshing-machine foldable straw-carrier	G. W. Parsons	605,204	June 7	273	63, 64	88	1401
Threshing-machine self-feeder	G. D. Stowe	606,597	June 28	2973	671	88	1964
Threshing-machine self-feeder	J. P. Geiger	603,664	May 10	805	177	88	774
Throttle	N. E. Springsteen	605,301	June 7	468	105	88	1440
Ticket-case	J. F. Eastman	602,214	Apr. 12	1098	240	88	220
Ticket. Continuous mileage	E. C. Hopper and C. F. McLean	604,923	May 31	3096	711 712	88	1284
Ticket holder and register	J. Sebastian and B. B. Anderson	605,165	June 7	122	49	88	1367
Ticket rack and register	A. A. Brown	605,655	June 14	1098	253	88	1582
Ticket. Railway		603,314	May 3	117	27, 28	88	624
Tide and wave motor							
Tie: *See* Cross-tie. Railway-tie. Railway-rail tie.							
Tie for bales, bundles, &c	A. Nichless	605,123	June 7	95	25	88	1370
Tie-plate. Gage-adjusting	A. B. B. Harris	603,563	May 3	587	130 131	88	714
Tile and arrangement thereof in roofs	J. Freund	604,085	May 17	1475	330	88	987
Tile. Cement roofing	G. Schulze	605,654	June 14	1097	252	88	1581
Tile. Roofing	A. Weil	602,889	Apr. 26	2245	510 511	88	471
Tile. Self-adjustable and reversible	F. T. and H. A. Hopkins	604,225	May 17	2022	452	88	1048
Tiles or plane surfaces. Device for decorating	G. H. Grundy and G. A. Lingard	605,137	Apr. 26	2668	610	88	556
Tiling for floors, walls, ceilings, fireplaces, &c	C. C. Alexander	602,691	Apr. 19	1913	426	88	302
Tilting gate	W. T. Foster	603,444	May 3	348	78	88	657
Time-lock	C. M. Ball	603,985	May 10	1257	286	88	951
Timepiece	J. C. Burke	604,297	May 17	1964	440	88	1031
Time-recorder	F. W. Cook, Jr	602,305	Apr. 12	1245	273	88	250
Time-recorder	J. W. Deubner	603,390	May 3	130	31, 32	88	627
Time-recorder	J. H. Gerry	602,286	Apr. 12	1215	267 268	88	244
Time-recorder	W. L. Bundy	605,159	June 7	164	46, 47	88	1386
Time-recorder. Workman's	P. G. Giroud	602,845	Apr. 26	2182	494 495 496	88	459
Time-recorder. Workman's	J. Neumark	603,200	Apr. 26	2761	.....	88	573
Tin from tin-plate waste. Extracting	W. Rogers	604,195	May 17	1779	401	88	996
Tin-plate. Process of and apparatus for manufacturing	J. Rigg	603,048	Apr. 26	2519	572 573	88	522
Tippler. Oscillating	W. Aab	605,986	June 21	1756	408	88	1762
Tire	R. Buchanan	602,934	Apr. 26	2342	534	88	490
Tire	R. Buchanan	602,935	Apr. 26	2343	535	88	490
Tire	O. B. Hall	604,750	May 31	2808	642	88	1229
Tire	A. Ryan	605,917	June 21	1618	372	88	1698
Tire	C. Taylor	601,703	Apr. 5	273	53	88	59
Tire	W. E. Richards	602,242	Apr. 12	1132	249	88	227
Tire	T. B. Jeffery	603,956	May 10	1289	294	88	967
Tire air-indicator. Bicycle	F. W. Morgan	604,087	May 17	1539	346	88	949
Tire and felly. Wheel	C. E. Buckbee	606,271	June 28	2207	534	88	1948
Tire and means for attaching same. Elastic	J. Reepmaker	602,595	Apr. 19	1677	381	88	348
Tire and repairing same. Pneumatic	J. Toren	606,604	June 28	2915	675	88	1966
Tire. Bicycle	W. Herrick	602,847	Apr. 26	2186	496	88	460
Tire. Bicycle	F. Warnock	605,156	June 7	181	45	88	1385
Tire casings. Device for drawing air-tubes into pneumatic	W. G. Kendall	604,663	May 24	2634	608	88	1177
Tire coupling. Pneumatic	J. P. Kunkle	602,907	Apr. 26	2393	521	88	478
Tire. Cushion	J. N. Dages	606,378	June 28	2510	568	88	1966
Tire. Cushion	F. E. Hall	604,042	May 17	1490	335	88	940
Tire. Elastic	J. B. Forsyth	603,968	May 3	46	12	88	609
Tire. Elastic	A. L. Cudey	603,726	May 10	874	194	88	787
Tire. Elastic vehicle	W. and J. C. Hancock and E. Scholes	605,543	June 14	878	206	88	1543
Tire. Elastic wheel	R. A. Leigh	605,219	June 7	499	111	88	1447
Tire. Elastic wheel	C. H. and G. Greaves	605,967	June 21	1519	349	88	1679
Tire ends. Apparatus for securing bicycle	L. W. Heelan	606,141	June 21	2049	469	88	1777
Tire for cycles, &c	H. Beach	602,253	Apr. 12	1153	253	88	228
Tire. Inflatable	J. R. Hare	603,846	May 10	1100	247	88	880
Tire-lever	C. A. Brauchler	602,052	Apr. 12	802	178	88	183
Tire patch. Pneumatic	C. Colls	603,374	May 3	223	50	88	643
Tire-patcher	W. L. Jolly	603,276	May 3	58	14	88	613
Tire. Pneumatic	L. D. Junkins	603,605	May 3	650	147	88	730
Tire. Pneumatic	C. A. Maynard	604,541	May 24	2420	538	88	1187
Tire. Pneumatic	P. T. McKay	602,766	Apr. 19	1695	459	88	414
Tire. Pneumatic	W. H. Sewell	603,710	May 10	847	188	88	781

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Tire. Pneumatic	F. R. Simms	605,021	May 31	3249	746	83	1314
Tire. Pneumatic	U. P. Smith	605,583	June 14	844	197	83	1535
Tire. Pneumatic	W. S. Williams	605,532	June 14	850	201	83	1536
Tire. Pneumatic wheel	G. H. Clark	601,705	Apr. 5	139	28	83	29
Tire-pump. Coin-controlled	L. S. Brown	605,606	June 14	1171	270	83	1506
Tire pump. Pneumatic	C. Pulcher	604,787	May 31	2864	654	83	1299
Tire repair device. Pneumatic	J. F. Palmer	605,045	Apr. 26	2515	570	83	522
Tire-repairing device. Pneumatic	W. N. Amory	602,420	Apr. 19	1437	324	83	306
Tire. Resilient	M. Brendel	603,036	Apr. 26	2500	567	83	519
Tire. Rubber	A. V. Kiser	605,861	June 21	1547	355	83	1685
Tire. Sheet-metal vehicle-wheel	J. Jamieson	605,435	June 7	715	160	83	1491
Tire-tightener	W. J. Cranford	606,050	June 21	1876	432	83	1743
Tire-tightener	G. M. Doersch	604,606	May 24	2545	580	83	1160
Tire-tightener	J. H. Osten	603,733	May 10	864	197	83	790
Tire tubes. Manufacture of pneumatic	F. W. Morgan and E. W. Young	605,644	June 14	1077	247 / 248	83	1578
Tire-valve	A. S. Cartwright	603,941	May 10	1265	288	83	862
Tire-valve, &c	G. H. F. Schrader	604,424	May 24	2200	495	83	1099
Tire-valve, &c	G. H. F. Schrader	604,425	May 24	2211	495	83	1099
Tire valve. Pneumatic	E. Fritschle	603,269	May 3	47	12	83	609
Tire valve. Pneumatic	J. Mohs	606,009	June 21	1912	440	83	1750
Tire. Vehicle	G. W. Cross	601,826	Apr. 5	384	81	83	72
Tire. Vehicle	H. A. Fonteine	605,414	June 7	697	153	83	1485
Tire. Vehicle	F. Latimer	602,759	Apr. 19	2016	457	83	412
Tire. Vehicle	W. N. Murdock and J. C. Hollings	605,117	June 7	81	23	83	1368
Tire. Vehicle	W. A. Shuler	602,038	Apr. 5	779	169	83	147
Tire. Vehicle	W. H. Hefner	604,529	May 24	2405	548	83	1132
Tire. Wheel	R. J. Scofield	601,907	Apr. 5	549	113	83	104
Tires. Appliance for indicating position of punctures in pneumatic	R. C. Hansell	602,132	Apr. 12	984	204	83	189
Tires. Armor for pneumatic	C. Graf	606,393	June 28	2517	584	83	1897
Tires. Back-pressure valve for pneumatic	I. D. Jewett	604,583	May 24	2414	.....	83	1134
Tires. Compound for healing punctures in pneumatic	G. F. Glidden	602,743	Apr. 19	1994	452	83	408
Tires. Device for closing punctures in pneumatic	P. Newell	605,330	June 7	514	115	83	1451
Tires. Device for repairing pneumatic	J. F. Reynolds	604,036	May 24	2592	592	83	1168
Tires. Device for repairing rubber	F. W. La Clair	604,708	May 31	2884	648	83	1235
Tires. Device for stopping holes in pneumatic	G. H. Clark	601,704	Apr. 5	137	27	83	29
Tires. Machine for cutting tread-filling strips for wheel	F. W. Huestis	601,894	Apr. 5	307	83.84	83	74
Tires. Machine for making vehicle	C. F. A. H. Bagot	608,161	Apr. 26	2718	618	83	582
Tires. Manufacture of resilient or pneumatic	A. Hopton	604,962	May 31	2996	686	83	1264
Tires on wheels. Means for fixing rubber	A. Gross	603,634	May 10	725	162	83	758
Tires. Pump for inflating pneumatic	J. W. Allen	605,584	June 14	960	201	83	1536
Tires. Tightening	G. Hirschbach	604,756	May 31	2817	643	83	1220
Tobacco carrier and cutter. Plug	J. B. Adt	605,371	June 7	906	185	83	1468
Tobacco-cutter	C. A. Rickard and E. N. Long	604,239	May 17	2053	.....	83	1048
Tobacco-leaves. Treating	W. Nax	603,709	May 10	835	185	83	779
Tobacco-pipe	G. G. Palmer	606,473	June 28	2676	616	83	1919
Tobacco-pipe	A. J. Fair	606,412	June 7	664	152	83	1484
Tobacco-steamer	A. V. Hysore	601,654	Apr. 5	54	11	83	11
Tobacco-treating apparatus	O. S. Harmon	606,209	June 28	2176	500	83	1819
Tobacco-treating machine	C. N. Grant	602,442	Apr. 19	1477	337	83	310
Toboggan. Roller	W. D. McDaniel	602,516	Apr. 19	1600	366	83	334
Toe-clip	E. R. Briggs	602,494	Apr. 19	1560	355	83	326
Toilet-case. Traveler's	J. B. Ford	604,354	May 17	2068	467	83	1054
Tombstone	V. G. Higgins	603,084	Apr. 26	2595	589	83	536
Tongs	J. Howell	603,604	May 3	656	147	83	790
Tongue. Carriage	C. H. Swank	603,267	May 3	242	55	83	647
Tongue-support	C. Pattberg	606,078	June 21	1937	444	83	1755
Tonsilotome	B. J. Hillman	606,547	June 28	2818	649	83	1947
Tool. Combination	J. C. Karner	604,880	May 31	2981	670	83	1289
Tool. Combination	W. N. McCarty	605,792	June 14	1354	310	83	1680
Tool. Combination	G. S. Neeley, A. Maitland, and G. Birkicht	604,478	May 24	2315	525	83	1117
Tool. Combination	G. M. Rockey and C. H. Strain	602,594	Apr. 19	1612	369	83	226
Tool. Combination	E. H. Shaw	606,395	June 28	2536	588	83	1891
Tool. Combination	A. B. Smith	601,737	Apr. 5	222	44	83	43
Tool-handle	J. P. Walter	601,690	Apr. 5	120	28	83	26
Tool-handle protector	J. A. Heintz	606,211	June 28	2180	501	83	1880
Tool-holder	H. S. Johnson	604,009	May 10	1427	320	83	998
Tool holder or carrier	W. J. Muncaster	605,504	June 14	817	189	83	1530
Tooth-crown. Artificial	M. W. Hollingsworth	602,581	Apr. 19	1707	386	83	353
Tooth-crown post. Artificial	W. S. How	602,582	Apr. 19	1709	386	83	353
Tooth-fillings	W. F. Davison	603,179	Apr. 26	2744	624	83	567
Tooth for crown and bridge work. Artificial	F. N. Brown	604,363	May 24	2106	472	83	1079
Tooth-powder box	C. Millington	603,731	May 10	880	195	83	788
Torpedo. Balloon	M. French	603,182	Apr. 26	2747	625	83	567
Torpedoes. Severing mechanism for aerial	J. A. Hill	603,699	May 10	814	180	83	776
Towel-rack	J. W. Lyon	605,565	June 14	980	215 / 216	83	1550
Tower	H. H. Macomber	603,011	Apr. 26	2464	560	83	512
Toy	J. Steppan	602,019	Apr. 5	744	160	83	141
Toy	A. M. Todd	604,180	May 17	1757	396	83	998
Toy gun	W. H. Holloway	603,262	May 3	224	53	83	646
Toy. Mathematical	W. W. Osborne	603,264	Apr. 26	2375	541	83	497
Toy or puzzle	J. Reepmaker	604,416	May 24	2192	491	83	1095
Toy or puzzle	R. Wilson	601,984	Apr. 5	574	119	83	109
Toy savings-bank	C. Smyth	605,064	May 31	3337	768	83	1338
Trace-carrier	W. P. Kellogg	606,347	June 28	2448	567	83	1875
Trace-holder	G. Bartlett	605,374	June 7	613	136	83	1469
Track-cleaner	W. T. Hurst	605,451	June 7	709	158	83	1490
Track-cleaner	J. Hyde	602,061	Apr. 12	850	185	83	173
Track friction-brake	E. E. Loomis and T. J. Mooers	605,964	June 21	1715	398	83	1715
Track-sander	C. V. Rote	605,558	June 14	909	210 / 211	83	1547

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Traction-engine	W. Stephenson	603,821	May 10	1048	223 / 224	83	881
Traction-engine. Oil-vapor	D. Best	602,594	Apr. 19	1739	399 / 394	83	357
Traction-engine with winding-drum	R. H. Fowler and G. S. Tuer	604,660	May 24	2039	601 / 602 / 603	83	1176
Traction-wheel	H. C. Duensing	604,006	May 10	1423	318	83	897
Trains, &c. Contrivance for automatically stopping	S. Pojarkow	605,973	June 21	1727	396	83	1718
Transferring strip and scale	W. D. Kimball	603,068	Apr. 26	2600	591	83	537
Transformer box and hanger	L. Gutmann	606,208	June 28	2174	499	83	1819
Transmitter and receiver. Combined	J. M. Joy	604,533	May 24	2415	549 / 550	83	1134
Transplanter	W. E. Cheeseman	602,894	Apr. 26	2249	512 / 513	83	472
Transplanter	R. T. Reasons	601,984	Apr. 5	604	147	83	131
Transportation system	W. Grosvenor	606,284	June 28	2328	539 / 540	83	1652
Trap: *See* Animal-trap. Ant-trap. Fish-trap. Fly-trap. Mole-trap. Steam-trap. Testing-trap.							
Trap	W. T. Ebert	603,479	May 3	430	95	83	693
Trap for sinks, &c	L. Mullenhoff	605,202	June 7	270	62	83	1401
Traverse-ring	W. Durst	602,981	Apr. 26	2418	551	83	504
Tree-box	W. B. Watson	601,691	Apr. 5	121	24	83	26
Tree-prop bracket	A. B. Ament and M. H. Evans	601,697	Apr. 5	130	26	83	26
Tree-protector	J. R. Braden	605,776	June 14	1304	301	83	1621
Tree-protector	J. A. Harvey	602,941	Apr. 26	2253	537	83	492
Trellis	F. D. Clark	605,608	June 14	1175	270	83	1506
Trellis	H. L. Adams	605,778	June 14	1327	304	83	1624
Trestle	D. R. Turpin	605,370	June 7	697	135	83	1467
Trestle	B. W. Trunk	603,251	May 3	185	42	83	637
Triangle	C. A. Way	605,763	June 14	1275	295	83	1616
Tricycle for invalids		605,580	June 14	855	200	83	1538
Trimmer: *See* Shade-trimmer.							
Tripod-stand for cameras, &c	R. R. Patchel	606,022	June 21	1896	421	83	1734
Triturator	C. L. Trusler	605,302	June 7	409	105 / 106	83	1441
Trolley	J. E. Wells	602,923	Apr. 26	2315	527	83	484
Trolley connection for electric cars	J. G. McLaughlin	605,326	June 7	507	118	83	1449
Trolley device for electric-railway cars	L. E. Watkins	603,672	May 10	789	173 / 174	83	771
Trolley. Electric-railway	S. H. Short	604,196	May 17	1763	409	83	997
Trolley-pole	J. N. Prisk	605,796	June 14	1359	311	83	1630
Trolley-switch	J. H. Vanasselt	605,211	June 7	384	66	83	1404
Trolley-wheel	A. F. Humphrey	605,716	June 14	1203	278	83	1602
Trolley-wire hanger	G. E. Johnson	605,251	June 7	371	84	83	1421
Trolley-wire hanger	W. A. McCallum	603,463	Apr. 19	1514	345	83	817
Trough: *See* Eaves-trough. Well-curb trough. Watering-trough.							
Trousers-creaser	J. E. Holmes	602,078	Apr. 12	847	184	83	173
Trousers-protector	P. C. Goldie	603,507	May 3	495	108	83	697
Truck	H. W. Horton	605,058	May 31	3312	760	83	1396
Truck. Car	J. Mendel	603,462	Apr. 19	1512	345	83	817
Truck. Car	E. Peckham	604,784	May 31	2858	653 / 654	83	1288
Truck. Car	M. B. Schaffer	603,457	May 3	373	84, 85	83	673
Truck. Collapsible	C. Green	605,224	June 7	312	71	83	1411
Truck equalizer. Car	E. A. Curtis	603,055	Apr. 26	2529	575	83	594
Truck for handling railway-rails	T. L. Flanagan	603,947	May 10	1274	290	83	864
Truck for motor-cars, &c	H. L. Gee	605,959	June 21	1663	386	83	1710
Truck-frame	T. M. Gallagher	604,608	May 24	2546	581	83	1160
Truck. Slag	J. H. Morcom	605,566	June 14	992	216	83	1551
Truck. Stock	G. P. Clark	603,676	May 10	794	175	83	772
Truck. Stove	D. L. Fogleman	601,643	Apr. 5	80	6	83	8
Truck. Transfer	H. C. Deane	605,163	June 7	186	48	83	1398
Truck transom. Car	T. M. Gallagher	604,610	May 24	2549	582	83	1161
Trundle-hoop	C. Haupt	602,358	Apr. 12	1164	256	83	235
Trunk	P. H. Smith	604,430	May 24	2220	497	83	1101
Trunk	P. H. Smith	605,143	June 7	182	40	83	1351
Trunk	P. H. Smith	606,431	June 28	2613	603	83	1907
Trunk	J. W. Hayden, Jr.	601,881	Apr. 5	308	68	83	74
Trunk corner-buffer	S. W. Bonsall	604,346	May 17	2070	493	83	1051
Trunk. Dress-skirt and wardrobe	W. J. Henry	603,493	Apr. 26	2504	569	83	536
Trunk-fastening	H. Brunner, Jr	603,496	Apr. 19	1561	355	83	327
Trunk-harness	C. G. Maxwell	603,698	May 10	831	184	83	778
Trunk or box attachment	H. A. Booth and J. P. Plummer	602,087	Apr. 5	761	164	83	144
Trunk. Traveling	T. W. Booth	603,004	Apr. 26	2455	559	83	510
Truss	E. H. G. Clark	603,126	Apr. 26	2667	605	83	553
Truss	W. F. Le Seur	606,465	June 28	2666	614	83	1918
Truss	S. Tucker	603,932	May 10	1253	265	83	860
Truss-pad							
Tube: *See* Inflation-tube. Speaking-tube.							
Tube-cleaner	S. J. Gunn	603,702	May 10	930	207	83	798
Tube-coupling	A. W. F. Bennik	604,294	May 17	1850	410	83	1005
Tube-cutter	J. Miller	605,357	June 7	981	88	83	1466
Tube-forming apparatus	E. F. Holinger	603,787	May 10	981	219 / 220	83	807
Tube-jointing machine	W. A. McCallum	603,327	May 3	165	38	83	633
Tube-making machine	J. A. Charnock	603,511	May 10	1020	229	83	816
Tube-making machine	J. R. Morrison	603,496	May 3	442	99	83	697
Tubes and ropes. Flexible metallic sheathing for	B. Kelso and M. Rosenbaum	605,567	June 28	2382	653	83	1961

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Tubes. Apparatus for locating obstructions in	B. C. Batcheller	602,422	Apr. 19	1439	385	83	304
Tubes. Machine for forming polygonal	C. P. Higgins	605,213	June 28	2181	501	83	1680
Tubes. Machine for manufacturing metal	T. B. Sharp and F. Billing	602,878	Apr. 26	2227	504	83	466
Tubes. Manufacture of seamless drawn	E. Ivins	601,966	Apr. 5	669	141	83	196
Tubes. Mechanism for expanding or enlarging metallic	R. C. Stiefel	605,067	May 31	2359	748 749	83	1816
Tubing. Manufacturing cold-drawn steel	W. A. McCool	602,350	Apr. 19	1315	293	83	295
Tubing. Manufacturing drawn	W. A. McCool	602,416	Apr. 12	1429	.....	83	298
Tubing. Method of and apparatus for manufacturing	T. Coates	603,812	May 10	1033	230	83	618
Tubs, boxes, &c. Fastening device for	F. T. Bradish	605,470	June 14	764	175	83	1580
Tuck-creaser	W. E. Rink	601,837	Apr. 5	429	94	83	87
Tug. Shaft-	H. A. Bierley	602,050	Apr. 12	900	173	83	168
Tumbler cutting and smoothing machine	A. Stenger	601,995	Apr. 5	112	29	83	26
Tumbler-washer	J. J. Evans	602,190	Apr. 12	1054	230	83	212
Tuning-pin	H. Müller	602,514	Apr. 19	1505	365	83	336
Turbine. Steam-	O. Trossin	604,507	May 24	2370	538 539	83	1136
Turn-table pinion-bracket	J. E. Roemheld	605,914	June 21	1612	371	83	1697
Turret-driving mechanism	N. P. Towne	606,089	June 21	1656	426	83	1739
Turret for war vessels	W. D. Stivers	604,495	May 24	2231	500 501	83	1108
Turret. Gun-	N. P. Towne	606,088	June 21	1653	427 428	83	1739
Twine ball or cop	G. H. Ellis and J. F. Steward	601,771	Apr. 5	226	57	83	55
Twine-holder	F. Bossong	604,961	May 31	3149	734	83	1295
Twine-holder	E. B. Weston	604,449	May 24	1055	507	83	1107
Twine-holder	F. W. Copcutt	603,129	Apr. 26	2672	606	83	553
Twine holder and take-up	S. S. Hartranft	606,545	June 28	2615	648	83	1947
Twyer. Furnace-	H. Byxbe	602,681	Apr. 19	1802	411	83	371
Type-case	G. A. Goodson	605,955	June 21	1695	386	83	1712
Type casting and setting machine	G. A. Goodson	605,954	June 21	1692	387 388	83	1712
Type casting and setting machines. Composing-machine for	G. A. Goodson	606,007	June 21	1791	411 412 413 414	83	1720
Type casting and setting machines. Controller for	G. A. Goodson	605,956	June 21	1701	389 390	83	1713
Type-casting apparatus	J. G. Pavyer	604,635	May 24	2501	591 592	83	1168
Type setting and justifying machine	F. B. Converse, Jr.	601,706	Apr. 5	140	28 29 30 31	83	30
Type-setting machine	S. H. and P. E. Hodgkin	602,327	Apr. 12	1279	283 284 285	83	286
Type-setting or other machines. Justifying device for	E. Wentscher	605,618	June 14	1084	236 237	83	1566
Type-writer	W. T. Robertson	605,516	June 14	833	194	83	1533
Type-writer attachment	F. G. Barber	605,373	June 7	611	136	83	1466
Type-writers or like machines. Counting apparatus for	W. Fish	601,641	Apr. 5	20	6	83	6
Type-writing machine, &c	T. Cahill	604,001	May 10	1371	312 313 314 315	83	884
Type-writing machine	J. M. Fairfield	605,864	June 21	1514	348	83	1678
Type-writing machine	E. E. Horton	605,877	June 21	1534	353 354	83	1681
Type-writing machine	E. von Hülsen	606,416	June 28	2578	596 597	83	1800
Type-writing machine	E. G. Latta	605,901	June 7	958	60 61 62	83	1309
Type-writing machine	P. W. Southgate	605,616	June 14	1018	264 265	83	1567
Type-writing machine	G. B. Webb	605,964	June 7	907	90	83	1437
Type-writing machine	E. Wentscher	605,619	June 14	1035	226	83	1569
Type-writing-machine erasing-plate	A. S. Johnson	602,559	Apr. 19	1670	379	83	346
Type-writing-machine ribbon-spool	H. H. Unz	605,032	May 31	3271	751	83	1316
Umbrella and holder	W. S. Lines	602,760	Apr. 19	2017	457	83	412
Umbrella. Folding	F. E. Stover and F. G. Grove	606,090	June 21	1660	458 459	83	1709
Umbrella-holder	L. A. D. Northrup	603,964	May 10	1207	206	83	860
Umbrella-holder	H. T. Stuckey	606,398	June 28	2545	590	83	1802
Umbrella-rib	J. G. Missimer	605,113	June 7	78	22	83	1307
Umbrella. Self-closing	F. E. Stover	604,975	May 17	1023	430	83	1034
Umbrella. Self opening or closing	E. Kleber	604,495	May 24	2351	543	83	1123
Umbrella-support	R. Miller	602,602	Apr. 19	1665	424	83	363
Umbrella-tip combination-lock	C. McCurdy	606,495	June 28	2606	601	83	1806
Umbrellas or parasols. Detachable handle for	S. S. Fretz	605,706	June 14	1102	275	83	1600
Undergarment	I. Goldberger	602,320	Apr. 12	1266	250 251	83	256
Undergarment	I. Goldberger	606,302	June 28	2186	495	83	1617
Undergarment	I. Goldberger	606,303	June 28	2186	496	83	1617
Undergarment	A. G. Velasko	604,163	May 17	1715	396	83	966
Undergarment-trunk	L. Sittig	602,166	Apr. 12	1052	220	83	212
Underskirt	S. Cain	604,964	May 31	3128	725	83	1295
Urinal-pan	T. H. Hutchinson	602,060	Apr. 12	940	185	83	173
Urn for buffet-cars. Heating-	R. M. Dixon	604,736	May 31	2764	637	83	1284
Vacuum-pan	H. G. Boswell	604,598	May 24	2339	576	83	1156
Vacuum-pans. Vapor-condenser for	W. and A. W. Dunn	604,607	May 24	2545	551	83	1160

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Vacuums. Apparatus for producing high	A. Barr and W. Stroud	604,486	May 24	2338	530 531	83	1121
Valve	M. Abt	604,595	May 24	2226	575	83	1155
Valve	I. Bean	605,989	June 21	1760	404	83	1723
Valve	J. L. Black	605,698	June 14	1168	269	83	1595
Valve	R. C. Bromley	605,984	June 7	926	140	83	1472
Valve	R. H. Buckingham	603,582	May 3	633	141	83	794
Valve	W. Burnett	606,404	June 28	2553	592	83	1804
Valve	C. R. Dallas	604,782	May 31	2777	635	83	1223
Valve	M. Groignard	605,711	June 14	1196	275 276	83	1600
Valve	H. Hörbiger	604,226	May 17	2023	453	83	1042
Valve	G. Johansson	605,549	June 14	885	207	83	1544
Valve	S. H. McCarroll	604,685	May 31	2988	672	83	1254
Valve	H. J. Schmitt and R. Bonnell	604,592	May 24	2530	573	83	1154
Valve	W. H. Shay	604,846	May 31	2958	677	83	1257
Valve	W. G. Urmson	604,809	May 31	2896	663	83	1246
Valve	E. A. Rix	602,170	Apr. 12	1016	223	83	204
Valve. Air-	J. F. Carpenter	605,513	June 28	2734	631	83	1162
Valve. Air-brake	W. O. Gunckel	604,612	May 24	2551	582	83	1161
Valve. Air-brake	M. Farrell	602,737	Apr. 19	1986	450	83	406
Valve. Antifreezing-	J. T. Wilson	605,943	June 21	1669	382	83	1707
Valve. Balanced	J. Campbell	606,119	June 21	2005	460	83	1769
Valve. Balanced slide-	J. R. Reynolds	604,940	May 31	2948	674	83	1256
Valve closers. Governing mechanism for throttle-	A. E. Colgate	602,429	Apr. 19	1451	329	83	306
Valve-controller	W. S. Alexander	604,358	May 24	2091	469	83	1075
Valve-controlling device	A. E. Colgate	605,197	June 7	251	59	83	1593
Valve-controlling device. Electrical	E. F. C. Davis	603,441	May 3	344	77	83	696
Valve device. Compound-engine	N. Power	603,922	May 10	1257	280	83	856
Valve. Differential piston-	B. Dale	603,380	May 3	231	52	83	645
Valve. Engine-	S. A. Hinton	605,084	June 7	27	8	83	1358
Valve for flush-tanks. Inlet-	A. J. Moxham	605,292	June 7	426	96	83	1433
Valve for locomotives or other engines. Steam-	W. Lowe	605,908	June 21	1720	394	83	1716
Valve. Gate-	C. M. Callanan	602,343	Apr. 12	1302	289	83	262
Valve-gear	H. B. Frisbie	605,389	June 7	635	142	83	1474
Valve. Globe-	J. P. Davis	604,695	May 24	2707	618	83	1190
Valve-handle	E. L. Rowe	604,220	May 17	1887	412	83	1007
Valve. Hydraulic-elevator	C. W. Thompson	606,584	June 28	2877	663	83	1959
Valve-indicator	W. A. Drewett	605,030	May 31	2965	750 751	83	1817
Valve mechanism. Engine-	L. O. Dehnel	603,399	May 3	268	60	83	651
Valve-operating device	S. Forter	606,053	June 21	1883	433	83	1745
Valve. Relief-	F. Quinn	603,108	Apr. 26	2023	506	83	542
Valve. Reverse-	Z. Latshaw	606,358	June 28	2473	574	83	1670
Valve-reversing gear	E. H. De Lany	604,1.7	May 17	1657	367	83	967
Valve. Sewer-	C. L. Scott	604,489	May 24	2343	531	83	1121
Valve. Steam-actuated	H. Leches and C. Kirchhahn	602,525	Apr. 19	1614	309	83	336
Valve. Tank-	M. Leitch	602,512	Apr. 19	1502	264	83	333
Valve. Tank supply-	A. K. Mansfield	604,408	May 24	2162	486	83	1089
Valve. Thermostatic	H. F. Gabel	604,771	May 31	2938	649	83	1234
Valve. Throttle-	P. J. Purdy	606,182	June 21	2003	465	83	1772
Valve. Water-heater	P. J. Purdy	603,577	May 8	905	134	83	718
Valves, boring cylinders, &c. Apparatus for re-seating	H. C. Hornish	605,810	June 14	1382	317	83	1684
Valves, boring cylinders, &c. Apparatus for re-seating	J. G. W. Entwistle, F. Starr, O. P. Talley, and H. E. Lorance.	601,782	Apr. 5	250	49	83	46
Vapor-burner	L. E. Fraipont	603,690	May 10	800	176	83	778
Vapor generator and burner	J. Peterson	605,865	June 21	1516	348	83	1678
Vaporizing apparatus. Oil-	J. Jacobs	604,785	May 31	2961	.....	83	1239
Varnish. Baking-	G. G. Owen	606,554	June 28	2396	651	83	1949
Vault-cover. Ventilating	W. M. Fletcher	606,220	June 28	2228	512	83	1830
Vault. Grave-	G. Ludwig	603,720	Apr. 19	1990	.....	83	407
Vegetation. Compound for destroying	N. Weston	605,887	June 21	1558	358	83	1687
Vehicle	C. W. Weddell and J. K. Waters	606,611	June 28	2923	678	83	1967
Vehicle	M. Woodhull	606,494	June 28	2709	624	83	1927
Vehicle and rocker. Convertible	J. W. Dipman and A. Exline	602,550	Apr. 19	1657	377	83	344
Vehicle-body	J. McCrudden	603,814	May 10	1035	231	83	819
Vehicle-body corner-iron	R. M. Artus	605,296	June 7	458	102	83	1439
Vehicle-body spring-hanger	F. H. Mayer	604,396	May 17	1042	435	83	1067
Vehicle-brake	H. E. Rolph	605,735	June 14	1290	294	83	1607
Vehicle-brake	C. Sample	603,015	Apr. 26	2470	561	83	513
Vehicle-brake	H. L. Bailey	604,668	May 24	2648	607	83	1180
Vehicle-brake. Automatic	J. S. Elliott	603,945	May 3	3	1, 2	83	601
Vehicle-brake. Automatic	J. Crowley	606,946	May 10	1273	289 290	83	864
Vehicle-coupling	C. J. Rosbrook and S. Burnham	601,695	Apr. 5	21	5	83	6
Vehicle-curtain	H. P. Wells and O. Morrill	603,512	May 3	502	110	83	606
Vehicle curtain-box	J. M. Goodwin	601,744	Apr. 5	240	47	83	46
Vehicle. Dumping-	H. G. Morris and P. G. Salom	603,528	May 3	537	118	83	704
Vehicle. Electrically-propelled	W. Legge	603,196	Apr. 26	2779	633 634	83	578
Vehicle. Folding road-	G. Strecker	604,331	May 17	2031	455	83	1044
Vehicle. Foot-propelled	H. C. Swan	605,038	May 31	3263	749	83	1312
Vehicle-iron. Adjustable	L. S. Clarke, W. Morgan, and W. S. Gordon.	604,198	May 17	1786	402	83	907
Vehicle. Motor-	W. W. Grant	603,283	Apr. 12	1306	305 306	83	242
Vehicle. Motor-	G. W. Lewis	602,621	Apr. 19	1778	406	83	365
Vehicle. Motor-	C. E. Lufbery	604,237	May 17	1849	414 415	83	1008
Vehicle motor	W. H. Pickering	601,731	Apr. 5	209	41	83	41
Vehicle-propelling mechanism	G. W. Lewis	603,047	Apr. 26	2517	571	83	529
	J. A. Little	604,332	May 17	2033	455 456	83	1044
		605,731	June 14	1290	293 294	83	1605

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Vehicle-propelling mechanism	H. Symes	603,518	May 8	512	111	83	699
Vehicle-rims. Device for contracting and expanding	W. H. Clawson	604,654	May 24	2021	112 599 600	83	1175
Vehicle running-gear	J. J. Casey	603,655	Apr. 19	1838	419	83	377
Vehicle running-gear	A. A. Holt	606,414	June 28	2575	596	83	1806
Vehicle running-gear	F. C. Lang	602,511	Apr. 19	1591	368 364	83	333
Vehicle running-gear	R. H. Wallace	604,811	May 31	2900	663	83	1947
Vehicle running-gear	E. C. Alford	604,994	May 17	1940	435	83	1027
Vehicle-seat back-rest	O. A. Timberlake	602,591	Apr. 19	1723	392	83	356
Vehicle-spring	A. H. Holland	606,413	June 28	2574	596	83	1806
Vehicle spring-seat	J. S. Hulings	603,955	May 10	1287	294	83	907
Vehicle-spring. Adjustable	C. N. Fisher	606,409	June 28	2565	593 594	83	1806
Vehicle steering device	J. E. M. Becker	605,070	June 7	8	2, 3	83	1354
Vehicle-wheel	L. R. Chambliss	604,720	May 31	2769	633	83	1221
Vehicle-wheel	W. G. and E. A. Crossley	604,372	May 24	2118	476	83	1061
Vehicle-wheel	J. A. Foster	606,531	June 28	2791	644	83	1943
Vehicle-wheel	E. C. Hayde	605,875	June 21	1531	353	83	1081
Vehicle-wheel	H. F. Julian	604,154	May 17	1699	383	83	960
Vehicle-wheel	H. F. Julian	604,155	May 17	1701	383	83	961
Vehicle-wheel	H. F. Julian	605,003	May 31	3819	741	83	1808
Vehicle-wheel	R. G. McDowell	603,865	May 10	1139	256	83	838
Vehicle-wheel	C. G. Whitaker	602,475	Apr. 19	1535	349	83	352
Vehicle-wheel	R. Schroedter	605,749	June 14	1249	289	83	1611
Vehicle wheel and axle	E. Schmidt and A. F. Schneider	603,886	May 10	1096	242	83	887
Vehicle-wheels. Coin-operated lock for	G. and J. M. Davis	605,759	June 14	1267	293	83	1614
Vehicle-wrench	A. V. Spang	603,927	May 10	1244	282 285	83	856
Vehicles. Convertible running-gear for	S. H. Short	603,433	Apr. 19	1457	331	83	307
Vehicles. Means for suspending motors on	E. Detwiler	603,418	May 3	302	68	83	655
Veil-holder	C. B. Adriance	606,541	June 28	2806	647	83	1945
Velocipede	W. J. Grotenhuis and H. T. Sidway	606,902	June 28	2359	545 546	83	1866
Velocipede	E. R. Royston	605,155	June 7	178	44, 45	83	1385
Velocipede	J. I. Warman	601,894	Apr. 5	362	80	83	72
Velocipede driving-gear	G. Barker	605,983	June 21	1644	377	83	1708
Velocipede-gearing	J. W. Sunderland	604,216	May 17	1515	406	83	1002
Velocipede-handle	P. Raczek	606,479	June 28	2698	619	83	1923
Velocipede. Ice-	W. L. Williams	602,072	Apr. 19	1393	181	83	170
Velocipede. Marine	J. F. Grady and M. Hart	602,523	Apr. 19	1610	368	83	335
Velocipede-saddle	J. W. Richardson	602,018	Apr. 5	743	160	83	141
Velocipede saddle-support	A. J. Parker	602,185	Apr. 12	1046	228 229	83	210
Vending-machine	M. Benedict	603,810	May 10	1027	229	83	817
Vending apparatus. Coin-operated	J. R. Bowling and G. W. Gilliland	606,949	June 28	2373	525	83	1840
Vending-machine. Coin-controlled	C. E. Snapp	602,543	Apr. 19	1644	374	83	341
Vending-machine. Coin-operated	L. M. Maxham	604,399	May 24	2157	484	83	1068
Vent-plug	W. P. Keenan	605,806	June 14	1376	315 316	83	1634
Ventilating system	J. McCreery	606,417	June 28	2588	597	83	1909
Ventilating system. House-	T. Hyde	605,506	June 14	821	191	83	1531
Ventilator: *See* Car-ventilator. Window-ventilator.	R. M. Pancoast	606,104	June 21	1977	454 455	83	1764
Ventilator and ventilator-brace	C. Twining	604,359	May 24	2094	469	83	1076
Vessel and sail and rigging therefor	W. P. Beam	605,598	June 14	852	199	83	1537
Vessel-closure	F. A. Walsh	605,898	June 14	1418	323	83	1641
Vessel-closure	A. R. Pritchard	603,899	Apr. 26	2344	510	83	471
Vessel-handle	J. E. Walsh	601,786	Apr. 5	224	44	83	43
Vessel. Lightering	L. Stampacchia	604,700	May 24	2713	620	83	1198
Vessels. Apparatus for manufacturing closed-ended	B. H. Raymond	605,231	June 7	284	75	83	1419
Vessels. Device for preventing refilling	L. Matignon	602,874	Apr. 12	1353	308	83	273
Vessels. Means for raising sunken	W. D. Stivers	605,942	June 21	1667	389	83	1707
Vessels. Turret-joint for naval	M. W. White	605,568	May 3	594	132	83	716
Violin	S. V. Lundquist	605,855	June 21	1500	344	83	1675
Violin music-holder	O. Colborne	605,105	June 7	67	19	83	1305
Vise	M. G. Lewis	605,107	June 7	68	19	83	1305
Vise. Bench-	M. G. Lewis	606,586	June 28	2737	607	83	1907
Vise. Bench-	L. Epstein	605,423	June 7	700	156	83	1487
Voltaic battery. Secondary	A. H. Hart	604,795	May 31	2666	655	83	1240
Voting-machine	B. Rein	602,101	Apr. 12	887	192	83	179
Vulcanizer	E. C. Perry	603,818	May 10	1042	233	83	890
Waffle-iron	C. Hotz	604,730	May 31	2775	634 635	83	1222
Wagon	G. M. Core	601,976	Apr. 5	694	145	83	129
Wagon-body. Folding	F. H. Murray	606,408	June 28	2559	591	83	1894
Wagon-body lining	W. L. Boardman	604,360	May 24	2131	478	83	1063
Wagon-brake	D. A. Foster	601,872	Apr. 5	488	100	83	91
Wagon-brake	W. Fraser	602,319	Apr. 12	1267	280	83	255
Wagon-brake	J. A. Gilkey	606,551	June 14	668	307	83	1545
Wagon-brake	J. R. Kinkade	604,704	May 24	2721	624	83	1198
Wagon-brake	S. L. Sisley	603,786	Apr. 19	2068	466	83	421
Wagon-brake	I. L. Wagner	605,125	June 7	122	31	83	1374
Wagon-brake	J. G. Robinson	605,235	June 7	290	76	83	1418
Wagon-brake. Automatic	E. Sinner	605,535	June 14	861	209	83	1539
Wagon-brake. Automatic	C. Bernhardt	602,151	Apr. 12	968	215	83	197
Wagon. Chute-	J. and G. Becker	604,997	May 24	2708	619	83	1191
Wagon. Dumping-	T. B. Hopper	601,859	Apr. 5	64	12	83	13
Wagon. Dumping-	G. Kautz	603,791	May 10	990	221	83	809
Wagon. Dumping-	E. P. Langford	604,789	May 31	2668	655	83	1240
Wagon. Dumping-	O. B. Reynolds	604,644	May 24	2007	505 506	83	1173
Wagon. Dumping-	S. Sturgis						

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Wagon. Garbage-	P. Bauer	604,575	May 24	2466	586	83	1180
Wagon-jack	C. T. Jandro	602,269	Apr. 12	1165	256	83	225
Wagon-seat support	C. Benecke	605,846	June 21	1480	328	83	1671
Wagon-spring	H. K. and H. W. Fell	603,088	Apr. 26	2402	565	83	517
Wardrobe	S. P. Moulthrop	601,855	Apr. 5	464	94	83	89
Wainscoting and parquetry for hard-wood floors, &c.	C. F. Parker	602,769	Apr. 19	2031	480	83	415
Warp from narrow or short supply-beams. Means for forming wide sheds of	I. E. Palmer	603,407	May 3	284	68	83	655
Warp-threads. Machine for unwinding	Z. H. Mangum	605,965	June 21	1716	302 304	83	1716
Warper-comb	A. E. Rhoades	602,771	Apr. 19	2036	461	83	416
Washboard	J. R. Clurton	603,558	May 3	578	126	83	713
Washboard	L. Ritchie	603,410	May 3	288	64	83	655
Washboard	J. W. Sheppard	602,479	Apr. 19	1539	350	83	333
Washboard	H. S. Briggs	603,958	May 3	16	4	83	603
Washboard-fastener	J. N. Emarine	604,858	May 31	2987	665	83	1303
Washboiler attachment							
Washer: *See* Barrel-washer. Photographic-print washer. Bottle-washer. Carriage-washer. Tumbler-washer. Gold-washer. Window-washer. Hinge-washer.							
Washing-machine	E. W. Allen	605,967	June 21	1758	408	83	1723
Washing-machine	J. S. Beatty	604,392	May 17	1952	437	83	1029
Washing-machine	A. W. Davis	601,950	Apr. 5	644	135	83	121
Washing-machine	B. A. Fisher	604,052	May 17	1472	330	83	987
Washing-machine	S. Flowers	604,557	May 24	2025	601	83	1175
Washing-machine	J. J. and L. C. Francis	606,131	June 21	2025	464 465	83	1773
Washing-machine	H. G. Johnson	605,731	June 14	1209	279	83	1608
Washing-machine	T. Landon	605,902	June 21	1712	302	83	1715
Washing-machine	J. D. Moser	608,511	May 3	500	100	83	606
Washing-machine	P. Petri	603,921	May 10	1236	260	83	856
Washing-machine	H. B. Roach	603,567	Apr. 19	1693	388	83	249
Washing-machine	J. B. Turbeville and M. F. Higgs	601,740	Apr. 5	290	45	83	44
Washing-machine	M. Peirson	601,989	Apr. 5	661	147	83	131
Watchcase	D. H. Church	605,269	June 7	408	92	83	1429
Watch-hand	C. Sivan	605,192	June 7	240	57	83	1396
Watch or clock. Talking	C. Prahl	603,086	Apr. 5	776	168	83	147
Watch. Repeating	S. W. Titus. (Reissue)	11,675	June 28	2978	691	83	1978
Water. Apparatus for using compressed air to elevate	H. H. Gorter	605,446	June 7	733	166	83	1492
Water-battery. Portable	R. Stretch	606,310	June 28	2378	550	83	1851
Water by steam. Device for heating	A. W. Cram	605,780	June 14	1330	304	83	1595
Water-closet	D. S. Schureman	604,548	May 24	2447	556	83	1139
Water-closet	J. W. Sharp, Jr., and J. W. Grantland	605,893	June 14	1404	322	83	1638
Water-closet	C. P. Carroll and J. I. Gorman	602,894	Apr. 26	2150	486	83	453
Water-closet flushing-tank	E. E. Townsend	605,150	June 7	170	42	83	1388
Water-closet flushing-tanks. Seat trip mechanism for	H. P. Cope	604,558	May 24	2460	560	83	1142
Water-closet seat	P. Nicolle	608,782	May 10	992	195 196 197	83	780
Water-closet, seat, &c. Combination	C. Pfau	602,195	Apr. 12	1060	233	83	213
Water-closet tank	E. D. Cain. (Reissue)	11,662	May 3	691	154	83	735
Water-column	F. Guttenberg	604,745	May 31	2806	641	83	1225
Water-cooler	J. B. Overton	601,950	Apr. 5	660	146	83	130
Water-elevator	J. Groom	602,806	Apr. 19	2105	475	83	432
Water-gate	A. W. Achard	603,897	May 10	1142	267	83	838
Water-heater	J. A. Ratchbone	603,409	May 3	287	64	83	655
Water-heater	J. A. Stevenson	604,131	May 17	1661	373	83	978
Water-heater	C. R. Tyler and C. F. Price	602,040	Apr. 5	782	169 170	83	148
Water-heater	W. L. Miller	606,066	June 21	2016	452	83	1750
Water-heater. Automatic	M. G. Cunningham	606,126	June 21	2039	466	83	1771
Water-heater. Gas	A. P. Broomell	603,160	Apr. 26	2789	621	83	564
Water-heater. Multiple-tube	W. F. Ray	603,521	Apr. 19	1607	366	83	385
Water heater or condenser	A. J. Vance	604,342	May 17	1868	418	83	1011
Water-lifting machine	J. Thomson	602,878	Apr. 12	1351	304	83	274
Water-meter	J. Thomson	602,877	Apr. 12	1350	304	83	274
Water-meters. Apparatus for preventing damage to	A. Rosenberg	606,351	June 28	2477	575	83	1880
Water-motor	E. A. Rindelli	601,906	Apr. 5	547	113	83	104
Water-motor	W. H. Wood and J. H. Stevens	603,001	Apr. 26	2450		83	510
Waterproof fabric	C. Applegate	603,548	May 3	565	134	83	710
Water-purifier	C. P. Allen	603,900	May 10	1343	307 308	83	877
Water purifying and aerating apparatus	A. A. Ellis	604,491	May 24	2246	532	83	1132
Water-purifying apparatus	J. S. Miller	603,221	Apr. 26	2813	642 643	83	879
Water-purifying apparatus. Sewage-	Z. Latshaw	603,695	Apr. 19	1908	433	83	901
Water seal and valve-trap	H. Gumtow	603,074	Apr. 12	840	182	83	171
Water-spraying apparatus	W. M. Stevenson and W. K. Bailey	603,373	Apr. 12	1358	302	83	272
Water-tank	F. E. Gregory	604,267	May 24	2198	480	83	1065
Water-tank machine. Grout	H. C. Schmidt	602,944	Apr. 12	1138	249 250	83	205
Water-tower	E. F. Edgar	602,801	Apr. 19	1570	349 350	83	335
Water-tube boiler	J. H. Hopwood	603,565	May 3	590	131	83	715
Water-tube boiler	C. C. S. Knap	606,158	June 21	2065	474	83	1730
Water-tube boiler	W. A. Lloyd	604,993	May 31	2800	736	83	1205
Water-tube boiler	L. M. Moyes	604,777	May 31	2648	651	83	1088
Water-tube boiler	W. J. Wickes and L. Baker	604,509	May 24	2275	540	83	1127
Water-tube boiler. Upright	A. Kenney	603,770	May 10	969	212	83	809
Water-wheel	W. Dey	603,321	May 3	187	38	83	635
Watering-trough							

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Wattmeter. Motor-	C. D. Raab	604,501	May 24	2261	385	88	1195
Wave-motor	H. R. Alden	608,796	Apr. 19	2089	472 472	88	495
Wave-motor	R. J. Robinson and W. A. Nelden	608,638	June 28	2992	697	88	1975
Wave-motor. Air-compressing	J. H. Leonard	608,561	June 28	2826	664	88	1882
Wave or current motor	G. Lofgren	604,311	May 17	1607	408	88	1001
Weather-strip	J. Follansbee	604,676	May 24	2261	610	88	1188
Weather-strip	H. H. Franzen	608,329	June 28	3514	584	88	1887
Weather-strip	E. B. Roth	605,500	June 14	927	224	88	1556
Weather-strip	J. T. Watts	608,518	May 3	505	110	88	698
Wedges for splitting stone, &c. Means for making	R. W. Campbell	608,989	May 10	1208	287	88	992
Weed-exterminating apparatus	J. W. Dutton and A. Crawford	602,060	Apr. 12	813	176	88	165
Weigher and measure. Grain	S. A. Bhise	608,122	Apr. 26	2056	603 604	88	549
Weighing and measuring device	F. W. Olin	601,674	Apr. 5	66	17	88	17
Weighing apparatus	F. W. Olin	605,127	June 7	101	27	88	1371
Weighing apparatus	G. Anderson	6.6,371	May 3	218	49	88	643
Weighing apparatus. Automatic	F. H. Richards	606,243	June 28	2992	581 582	88	1885
Weighing-machine	R. C. Mealey	605,899	June 21	1561	350	88	1686
Weighing machine. Milk-	A. Hirsch	606,242	June 28	2441	506	88	1874
Welding, brazing, and soldering by electricity. Apparatus for	C. Nielson	601,979	Apr. 5	689	146	88	190
Welding-machine. Electric	R. Eyre	602,284	Apr. 12	1210	266 267	88	943
Welding. Track-	A. A. James	606,150	June 21	2062	473	88	1779
Well-curb	J. R. G. Reeves	603,344	May 3	175	44	88	695
Well-curb trough	E. Lawton	602,339	Apr. 12	1296	287	88	261
Well-drill	S. Adams	602,419	Apr. 19	1430	324	88	308
Well-drilling cable	S. W. Titus	602,547	Apr. 19	1652	376	88	548
Well. Tube-	A. C. Smith	605,756	June 14	1264	302	88	1613
Well-tubing attachment. Oil-

Wheel	G. Millen	605,112	June 7	76	22	88	1367
Wheel	M. H. Smith	606,365	June 28	2462	576 577	88	1861
Wheel	C. D. Stevens	601,902	Apr. 5	388	93	88	66
Wheel	A. J. Vandegrift	602,999	Apr. 26	2445	556	88	508
Wheel	M. Ash	601,622	Apr. 5	1	1	88	3
Wheel cleaner. Vehicle-	F. R. Simms	605,022	May 31	3251	747	88	1314
Wheel for motor-cars, &c.	F. J. Singleton and R. R. de la Gillonniere	602,480	Apr. 19	1540	350	88	323
Wheel-guard. Vehicle	L. D. Junkins	602,020	Apr. 5	745	160	88	141
Wheel-rim	F. L. Brandon and A. Roop	602,123	Apr. 12	922	201	88	186
Wheel rim-joint. Vehicle-	G. L. Wiser	601,925	Apr. 5	575	119	88	109
Wheel rim-joint. Vehicle-	J. Zühlke	602,996	Apr. 26	2325	509	88	497
Wheel-rims. Means for making	C. W. Spengler	603,156	Apr. 26	2719	616 617	88	561
Wheel-wrench	G. Brown	608,782	May 10	971	217	88	605
Wheels. Automatic indicator for truing	M. V. Garver	602,504	Apr. 19	1574	360	88	230
Wheelbarrow	R. A. Kneeland	605,316	June 7	493	110	88	1446
Wheelbarrow	P. Burgland	608,315	May 3	118	28	88	625
Whiffletree attachment	F. W. Chickering	603,257	May 3	24	6	88	605
Whiffletree-coupling	C. O. Bolton	605,381	June 7	623	139	88	1471
Whiffletree-hook	F. E. Lack	602,136	Apr. 12	941	206	88	190
Whiffletree-hook	H. Olson	606,357	June 28	2472	574	88	1879
Whiffletree-hook	C. N. Daman	604,186	May 17	1760	398	88	994
Whist board. Duplicate-	A. B. Davis	603,555	May 3	575	197	88	712
Whistle	J. L. Hanson	604,918	May 31	3090	710	88	1393
Whistle	W. A. Penfield	605,186	June 7	230	56	88	1394
Wick-lifting device	H. H. Walt	605,154	June 7	177	44	88	1394
Winding device. Instrument-	W. D. Huse	603,569	Apr. 19	1711	399	88	858
Winding machine. Bobbin-	J. D. Whyte	605,984	June 21	1750	401 402	88	1782
Winding machine. Yarn-	R. Atherton	603,251	Apr. 12	1150	258	88	231
Winding, warping, and beaming machine indicator	C. A. Morrison and J. Moran	603,287	Apr. 26	2049	649 650	88	566
Windlass	J. Coates	605,079	June 7	18	6	88	1356
Windmill	N. Hein	603,188	Apr. 26	2764	630	88	570
Windmill	S. K. Humphrey	603,905	May 10	1208	272	88	651
Windmill	R. Leonhart, Jr	601,972	Apr. 5	677	143 144	88	126
Windmill	A. Zwiebel	603,506	May 10	1021	227	88	816
Windmill-regulator	W. P. H. Campbell	603,153	Apr. 12	994	219	88	198
Windmill shaft-support	L. W. Noyes	604,780	May 31	2854	659	88	1236
Wind-wheel	H. Thompson	603,119	Apr. 26	2630	603	88	546
Window	J. Appell	603,712	Apr. 19	1946	442	88	360
Window	B. F. Richards	602,361	Apr. 12	1338	296 297	88	263
Window	F. Vittner	602,895	Apr. 26	2240	508 509	88	470
Window	H. K. Whitner	603,400	June 28	2547	580	88	1593
Window-cleaner's safety support	C. A. Müller and G. Hinman	605,610	June 14	1099	233	88	1585
Window-cleaning seat	E. Kubasch	603,648	June 14	1075	247	88	1577
Window-closer. Automatic	A. P. Spiller	604,945	May 31	3135	718	88	1391
Window fastener. Storm-							

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Window-frame	F. X. Payment and J. C. Hartig	605,335	June 7	522	117	88	1492
Window frame and sash	N. M. Kittelsen and M. Walker	608,597	May 3	641	143	88	736
Window lock and operator	A. J. Williams, J. J. Thomas, and M. Richards	605,569	June 14	926	217	88	1551
Window-screen	O. A. Bingham	601,625	Apr. 5	4	1	88	3
Window-screen	W. H. Casselberry	602,558	Apr. 19	1661	377	88	345
Window-screen	B. J. and M. Kolb	604,620	May 24	2566	585	88	1164
Window-screen	J. H. Onstad	601,715	Apr. 5	180	35	88	26
Window-screen	E. Speaker	604,799	May 31	2865	659	88	1244
Window-screen	T. H. Schmitz	602,245	Apr. 12	1138	260	88	239
Window structure	T. H. Schmitz	604,808	May 31	3008	689 690	88	1305
Window structure	K. C. Sanborn	606,088	June 21	1955	449	88	1759
Window ventilating attachment	W. L. and E. G. Johnson	604,618	May 24	2562	585	88	1164
Window-ventilator	P. Sweeney	603,414	May 3	297	66	88	657
Window-washer	S. Urmston	608,581	May 3	609	136	88	719
Window-washer	J. T. Bennett	604,927	May 31	3102	713	88	1295
Wine. Apparatus for removing saccharin or other impurities from	C. K. Kirby	603,880	May 10	1164	263	88	843
Wine-press. Continuous	G. B. Lamb	604,709	May 31	2835	648 649 324 325 326 327 328	88	1283
Wire-drawing machine	C. O. White and M. B. Lloyd	605,331	June 14	1421		88	1642
Wire fabric. Apparatus for weaving coiled-	G. R. Lamb	606,424	June 28	2601	599	88	1905
Wire-fabric machine tension and feed mechanism	F. Faries	603,134	Apr. 26	2679	608 609	88	555
Wire. Machine for making check-row	C. W. Selvidge	606,092	June 21	1959	450	88	1760
Wire or other purposes. Machine for stretching	J. H. Stauffer	605,980	June 21	1639	376	88	1702
Wire-picket-twisting device	E. L. Shotwell and J. Brims	603,796	May 10	998	223	88	811
Wire-reel	J. G. Thomas	602,783	Apr. 19	2055	466	88	490
Wire-stay fastener	J. Atkins	603,993	May 10	1143	257	88	880
Wire straightening and twisting machine	C. L. Borst	605,848	June 21	1488	339	88	1671
Wire-stretcher	L. Clark	604,312	May 17	1973	442	88	1083
Wire-stretcher	G. M. Doyle	606,523	June 28	2752	636	88	1936
Wire-stretcher	T. M. Guest	604,148	May 17	1691	390	88	978
Wire-stretcher	E. F. and J. Manning	605,495	June 14	807	187	88	1508
Wire-stretcher	Z. Cramer	605,061	June 7	23	7	88	1357
Wire-stretching tongs	L. Cook	604,604	May 24	2541	579 580	88	1159
Wire-swaging machine	O. Ashton	603,394	May 3	258	57, 58	88	649
Wire-threading machine	D. Bunnell and A. A. Brower	604,578	May 24	2502	569	88	1151
Wire-tightener	J. B. Vall	606,178	June 21	2109	485	88	1788
Wire-tightening device	C. M. Lamb and J. W. Page	606,464	June 28	2664	613 614	88	1917
Wire-weaving machines. Warp-feed equalizer for	E. Klein	605,060	May 31	3317	-----	88	1327
Wood and fiber. Composition for impregnating	M. Bachert and D. W. O'Neil	602,718	Apr. 19	1947	442 443	88	399
Wood and preparing same. Preserved	J. Nightingale	606,574	June 28	2661	659	88	1956
Wood block for paving	C. E. Postlethwaite	602,519	Apr. 19	1605	-----	88	335
Wood-cleaning compound	M. Arnn	601,767	Apr. 5	278	-----	88	54
Wood, &c. Composition for coloring and preserving	A. Mitscherlich	606,017	June 21	1818	418	88	1732
Wood into fibers suitable for use in the arts. Converting	F. M. Kennedy	602,507	Apr. 19	1678	361 362	88	330
Wood molding and sawing machine	A. M. Bagby	602,612	Apr. 19	1759	401	88	362
Wood-shaping machine finishing-tool	W. J. Woodward	603,292	May 3	254	56	88	648
Wooden-pipe-banding machine	R. R. Gubbins	608,139	Apr. 26	2689	610	88	556
Wooden structures. Building circular	D. P. Cooper	608,261	May 3	30	8	88	606
Woodworking-machine	J. B. Chace	603,037	Apr. 26	2502	567 568	88	519
Woodworking machinery	J. W. Spencer	605,025	May 31	3256	748	88	1316
Wool-drier	F. G. Sargent	605,653	June 14	1096	252	88	1581
Wool-washing-machine ducker	C. D. Eames	603,558	May 3	581	199	88	713
Work-holder	A. Heald	605,763	June 14	1338	305	88	1626
Woven fabric	E. H. Cummins	606,332	June 28	2427	561	88	1871
Wrapper-covering	L. C. Crowell	609,293	May 3	32	9	88	606
Wrapping-machine	L. C. Crowell	608,585	May 3	619	136	88	721
Wrapping-machine	L. C. Crowell	603,602	May 3	650	145 146	88	726
Wrapping-machine							
Wrench: *See* Adjustable wrench. Jaw-wrench. Monkey-wrench. Nut-wrench. Nut and pipe wrench. Pipe-wrench. Ratchet-wrench. Ratchet-wheel wrench. Vehicle-wrench. Wheel-wrench.							
Wrench	F. Aaron and J. R. G. Huffman	603,494	May 3	467	108	88	660
Wrench	J. Brown	606,270	June 28	2806	624	88	1847
Wrench	M. H. Curry	603,178	Apr. 26	2743	624	88	567
Wrench	T. Dinkelberg	606,381	June 28	2514	584	88	1887
Wrench	J. K. Downie	604,375	May 24	2194	477	88	1092
Wrench	T. Forstner	601,779	Apr. 5	260	57	88	55
Wrench	A. B. Frack	601,951	Apr. 5	454	91	88	64
Wrench	H. J. Hancock	604,291	May 24	2144	468	88	1055
Wrench	G. W. Heaning	604,753	May 31	2818	643	88	1229
Wrench	E. Henwood	603,530	May 3	548	119	88	705
Wrench	W. F. Lawler	608,194	Apr. 26	2775	632	88	572
Wrench	J. G. Newell	601,672	Apr. 5	84	17	88	17
Wrench	F. Olsen	608,572	May 3	599	133	88	717
Wrench	W. H. Robinson and E. J. Lawless	605,746	June 14	1945	398	88	1609
Wrench	H. M. Smith	603,290	May 3	76	20	88	616
Wrench	G. R. Van Schoick	608,817	June 28	2201	559	88	1264
Wrench	M. Weiss	603,305	May 3	108	25	88	631
